UIS System Architecture

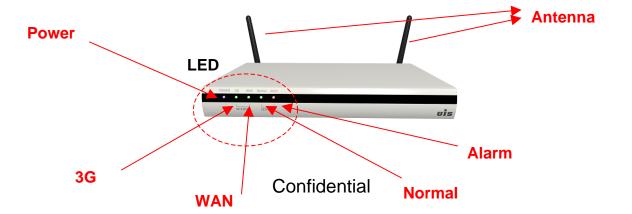

Step 1 : Power on the Gateway(WG-110) - plug adapter into the wall power socket

Step 2: It takes around 40 sec for Gateway to boot up and get ready, you may check out the LEDs of Power(blue) / Normal(green) to identify

Step 3 : Set up WiFi connection between the PC and Gateway

- Power on your PC and enable WiFi(only 802.11b/g supported) network access
- Set PC's WiFi interface IP by using DHCP(dynamic IP)
- Search Gateway's SSID (you may see the default SSID value on the bottom side of Gateway while doing the first time setup) and get connected with Gateway (PC's WLAN IP address will be assigned by Gateway)

	◎ 撃 連線到網路		
SSID	選取要連線的網路 順示 無線 ● 具有安全性的網路 ● 目有安全性的網路 ● BF-UISCO ● 目有安全性的網路 ● SF-UISCO ● 目有安全性的網路 ● HOLD_Enterprise_Pu 無安全性的網路 ● 設定連線或網路 開飲網路和共用中心		❤ WiFi signal
		連線(O) 取満	

Step 4 : Set up PC console

- Open the IE browser(6.0 or above) and enter the Gateway IP (you may see the default IP address on the bottom side of Gateway while doing the first time setup)

- Key in the login password "123" (factory default) to enter the main page

Step 5 : Enter the main console of Gateway

WHSS-Wireless Home Security System

Welcome to the setup home page of WHSS, you can configure all system components step-by-step via here. If you encounter any difficulties to complete the setting, you may check out the User Manual, Website or contact the local channel rep you purchased from.

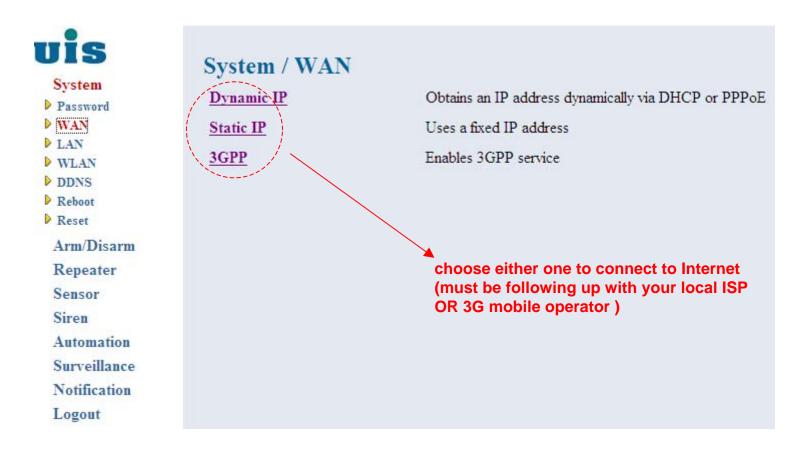

Step 6 : Click "System" to change the console login password

System Password WAN UAN UAN ULAN ULAN CREDOOT CRE	System / Password New Password (3-12 Numeric) Confirm Password
	click here to take effect click here to abort
	Confidential 9

Step 7 : Click "WAN" to configure Gateway's WAN interface

Step 8 : Click "Dynamic IP" to configure Gateway's WAN interface

UIS System	System / WAN / Dynamic IP	choose either one as required
 Password WAN LAN WLAN DDNS Reboot Reset Arm/Disarm Repeater Sensor Siren Automation Surveillance Notification Logout 	You may choose either DHCP or PPPoE as require DHCP App (PPPoE User Name Password Please re-type your password App	
		Cancel

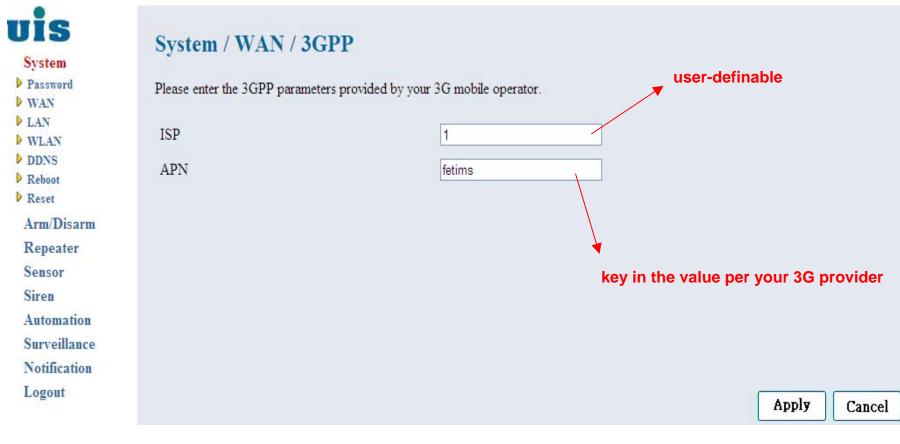

Step 9 : Click "Static IP" to configure Gateway's WAN interface

İS	System / WAN / Static IP			
System				
Password WAN LAN	IP address	0	00	
WLAN DDNS	Subnet Mask	255	255 . 255 . 0	
Reboot Reset	Default Gateway IP	0	0, 0, 0	
Arm/Disarm	DNS IP Address	210	241 . 192 . 201

Step 10 : Click "3GPP" to configure Gateway's WAN(3G express card) interface

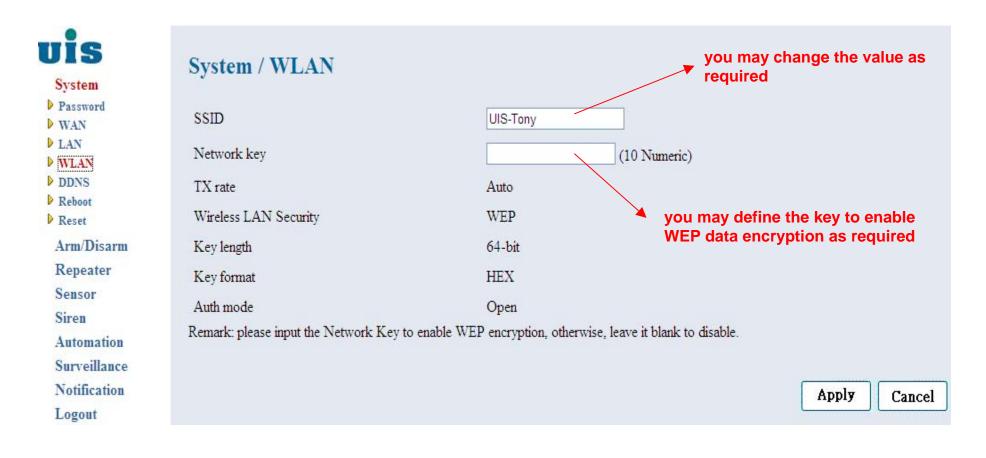

Step 11 : Click "LAN" to configure Gateway's LAN interface

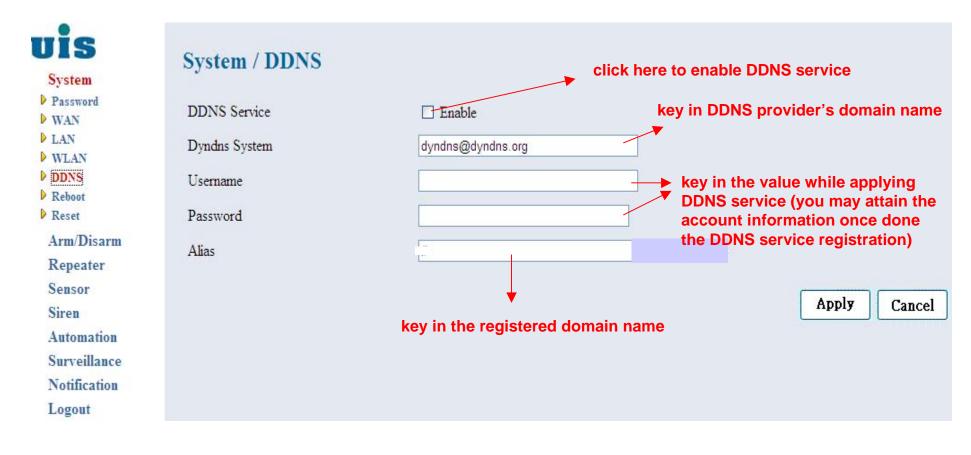

Step 12 : Click "WLAN" to configure Gateway's WLAN interface

UIS System Setup

Step 13 : Click "DDNS" to configure Gateway's DDNS (Dynamic DNS) information

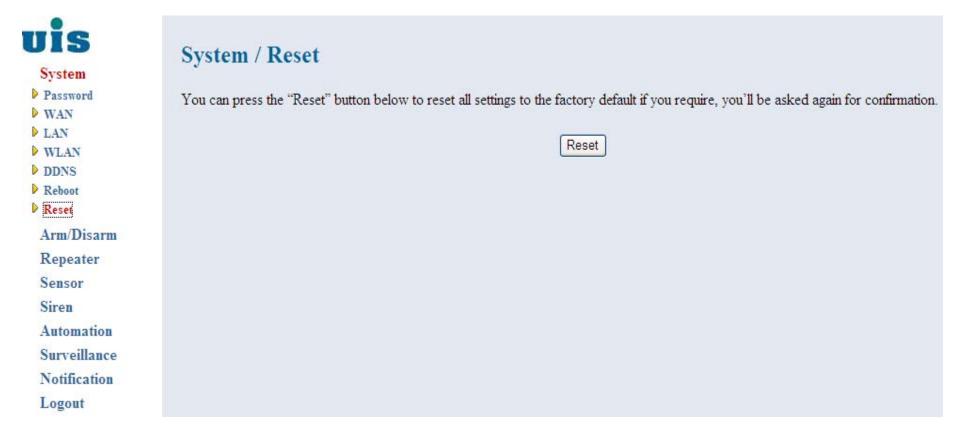

Step 14 : Click "Reboot" to power reboot the Gateway

UIS System Setup

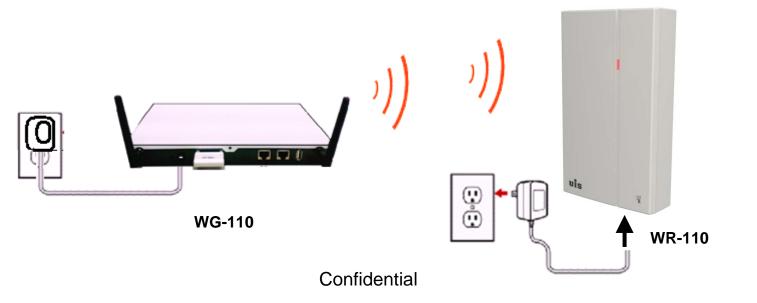

Step 15 : Click "Reset" to reset all settings to the factory default and power reboot the Gateway

UIS Repeater Setup

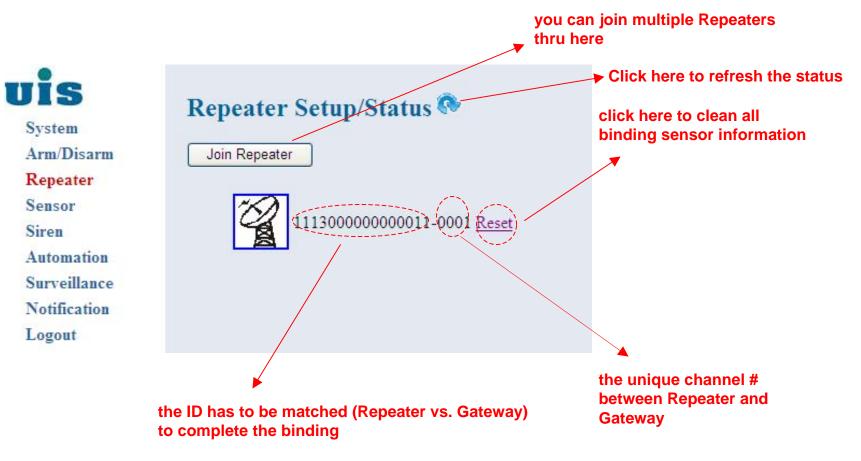

Step 16 : Power on the Wireless Repeater (WR-110) and get connected with Gateway

- Plug adapter into the wall socket to power on the Repeater
- Push the back side "set" button of Repeater for 5 sec, the indicator will blink blue light twice and turn red light again
- Click "Join Repeater" button via the WG-110 console (see next page) to join the repeater
- Repeater's indicator will turn blue light to sync up the access ID with WG-110
- Wait couple seconds or click the "Refresh" button to check out the result
- Repeat above steps to join the other repeaters
- The max. distance between Gateway and Repeater is 30M as suggested

UIS Repeater Setup

Step 17 : Click "Repeater" to configure repeaters

Linear-type (data retrievable) disaster sensor

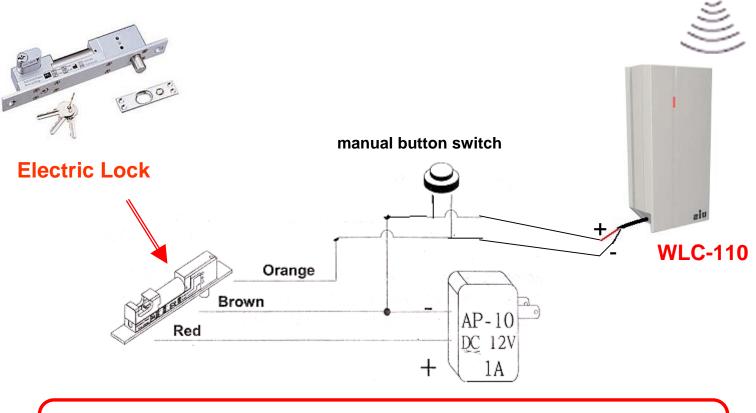

To transform the Temperature Sensor signal into wireless control signal by using AI Transducer(4-20mA).

To transform a conventional Electric Lock signal into wireless control signal by Lock Controller

CAUTION !!

- Risk of explosion if battery is replaced by an incorrect type
- Dispose of used batteries according to the instructions

UIS 3G WWAN Cards Purchase Inf.

- 3G express card is an option for customer to purchase from the third-party (non-UIS product), it's highly recommended to choose from UIS's AVL suppliers.
- 3G WWAN cards support list of WG-110

Brand	Model Number	FCCID Number	
Option NV	GE0441	NCMOGE0441	
Sierra Wireless Inc.	AirCard 880E	N7NAC880E	

- The customer should purchase the 3G WWAN cards which shall be FCC approved.
- 3G WWAN cards must not exceed a maximum ERP of 1.5W for part 22H.
- 3G WWAN cards must not exceed a maximum EIRP of 2W for part 24E.

The End
