1. Summary

This report summarizes all antennas performance to support U10C149 project.

WIFI X 4

2. General Description

Model: Cable Modem.

Antennas are designed on PCB.

Coaxial cable connected PCB directly, which placed on the side wall.

Project: U10C149	Date: 2019/11/28
Antenna Designer: Charles Lee	
Rev.: V1	Note:

2.2. Test Fixture Setup

Figure 3 Environment of Setup.

3. Antenna Test Environment

Chamber Dimension: 7.3 * 3.66 * 3.66 m

Frequency Range: 700 MHz~6 GHz

- 3D Antenna Chamber adopted ETS-Lindgren's AMS-8500 system which is authorized by CTIA and it can satisfy test items of different antenna products, such as NB, cellular phone, AP, GPS...etc.
- It can support passive antenna measurement function for antenna designer to verify antenna characteristics such as 2D/3D radiation pattern measurement, efficiency, VSWR, and Isolation.
- Certification by TAF in 2010
- Add active antenna measurement function for OTA testing items such as TRP, TIS in 2010 4Q.

Figure 4 3D Chamber

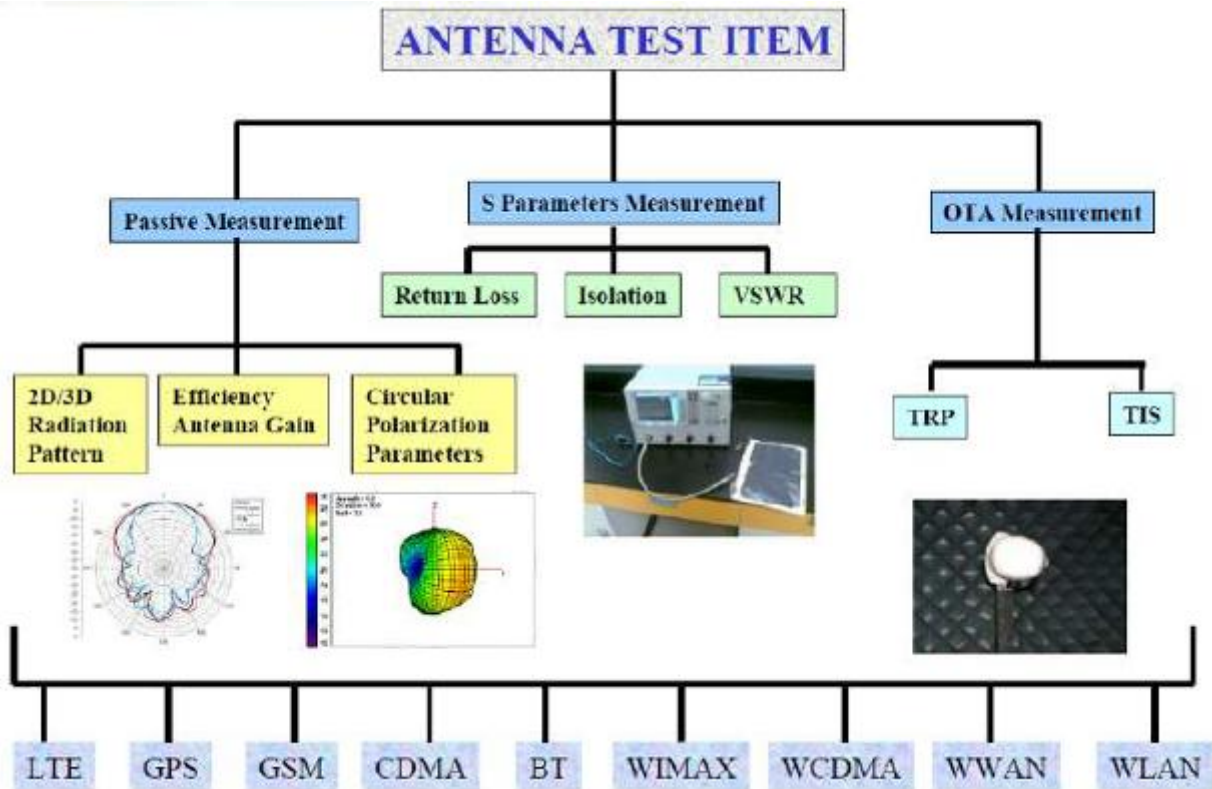

Figure 5 Chamber Compatibility

Capability Of OTA

OTA test function will be certificate by TAF in 2011 4Q

Project: U10C149	Date: 2019/11/28
Antenna Designer: Charles Lee	
Rev.: V1	Note:

5. Conclusion

There are 4 dipole WIFI antennas in this project. We suggest that all the cable routings need to separate independently, so as to reduce antenna isolation interference from each other(WIFI#1: 155mm; WIFI#2: 87mm; WIFI#3: 75mm; WIFI#4: 100mm). Thus, the antenna performance can meet the specifications. Next, we will maintain the antenna efficiency to the following up schedule.

Project: U10C149	Date: 2019/11/28
Antenna Designer: Charles Lee	
Rev.: V1	Note:

6. Appendices A

6.1. Cable Attenuation
