A2LA ACCREDITED
TESTING CERT #2381.01

MiCOM Labs is an ISO 17025 Accredited Testing Laboratory

This page has been left intentionally blank

TABLE OF CONTENTS

ACCREDITATION, LISTINGS & RECOGNITION

TESTING ACCREDITATION

MiCOM Labs, Inc. is an accredited Electrical testing laboratory per the international standard ISO/IEC 17025. The company is accredited by the American Association for Laboratory Accreditation (A2LA) www.a2la.org test laboratory number 2381.01. MiCOM Labs test schedule is available at the following URL; http://www.a2la.org/scopepdf/2381-01.pdf

Accredited Laboratory

A2LA has accredited

MiCOM LABS

Pleasanton, CA

for technical competence in the field of

Electrical Testing

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005 *General requirements for the competence of testing and calibration laboratories*. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (*refer to joint ISO-ILAC-IAF Communiqué dated April 2017*).

Presented this 14th day of May 2018.

President and CEO
For the Accreditation Council
Certificate Number 2381.01
Valid to November 30, 2019

For the tests to which this accreditation applies, please refer to the laboratory's Electrical Scope of Accreditation.

RECOGNITION

MiCOM Labs, Inc has widely recognized wireless testing capabilities. Our international recognition includes Conformity Assessment Body designation by APEC MRA countries. MiCOM Labs test reports are accepted globally.

Country	Recognition Body	Status	Phase	Identification No.
USA	Federal Communications Commission (FSB)	TCB	-	US0159 Listing #: 102167
Canada	Industry Canada (IC)	FCB	APEC MRA 2	US0159 Listing #: 4143A-2 4143A-3
Japan	MIC (Ministry of Internal Affairs and Communication)	CAB	APEC MRA 2	RCB 210
	VCCI	--	--	A-0012
Europe	European Commission	NB	EU MRA	NB 2280
Australia	Australian Communications and Media Authority (ACMA)	CAB	APEC MRA 1	US0159
Hong Kong	Office of the Telecommunication Authority (OFTA)	CAB	APEC MRA 1	
Korea	Ministry of Information and Communication Radio Research Laboratory (RRL)	CAB	APEC MRA 1	
Singapore	Infocomm Development Authority (IDA)	CAB	APEC MRA 1	
Taiwan	National Communications Commission (NCC) Bureau of Standards, Metrology and Inspection (BSMI)	CAB	APEC MRA 1	
Vietnam	Ministry of Communication (MIC)	CAB	APEC MRA 1	

EU MRA – European Union Mutual Recognition Agreement.
NB – Notified Body
APEC MRA – Asia Pacific Economic Community Mutual Recognition Agreement.
Recognition agreement under which test lab is accredited to regulatory standards of the APEC member countries.
Phase I - recognition for product testing
Phase II – recognition for both product testing and certification

PRODUCT CERTIFICATION

MiCOM Labs, Inc. is an accredited Product Certification Body per the international standard ISO/IEC 17065. The company is accredited by the American Association for Laboratory Accreditation (A2LA) www.a2la.org test laboratory number 2381.02. MiCOM Labs test schedule is available at the following URL; http://www.a2la.org/scopepdf/2381-02.pdf

Accredited Product Certification Body

A2LA has accredited

MiCOM LABS

Pleasanton, CA

This product certification body is accredited in accordance with the recognized International Standard ISO/IEC 17065:2012 *Requirements for bodies certifying products, processes and services*. This product certification body also meets the *A2LA R322 – Specific Requirements – Notified Body Accreditation Requirements* and *A2LA R308 - Specific Requirements - ISO-IEC 17065 - Telecommunication Certification Body Accreditation Program*. This accreditation demonstrates technical competence for a defined scope and the operation of a management system.

Presented this 14th day of May 2018

President and CEO
For the Accreditation Council
Certificate Number 2381.02
Valid to November 30, 2019

For the product certification schemes to which this accreditation applies, please refer to the organization's Product Certification Scope of Accreditation.

United States of America – Telecommunication Certification Body (TCB)

Industry Canada – Certification Body, CAB Identifier – US0159

Europe – Notified Body (NB), NB Identifier - 2280

Japan – Recognized Certification Body (RCB), RCB Identifier - 210

1 TEST RESULT CERTIFICATE

Manufacturer:	Thinkify LLC 18450 Technology Drive, Suite E1 Morgan Hill, California 95037 USA	Tested By:	MiCOM Labs, Inc. 575 Boulder Court Pleasanton California, 94566, USA
EUT:	915 MHz High Speed Wireless Programmer	Telephone:	+1 925 462 0304
Model:	T265R	Fax:	+1 925 462 0306
S/N:	TR-65		
Test Date(s):	5th September 2018	Website:	www.micomlabs.com

STANDARD(S)	TEST RESULTS
FCC 47 CFR Part 90 SubPart M, 90.353	EQUIPMENT COMPLIES

MiCOM Labs, Inc. tested the equipment mentioned in accordance with the requirements set forth in the above standards. Test results indicate that the equipment tested is capable of demonstrating compliance with the requirements as documented within this report.

Notes:

1. This document reports conditions under which testing was conducted and the results of testing performed.
2. Details of test methods used have been recorded and kept on file by the laboratory.
3. Test results apply only to the item(s) tested.

Approved & Released for MiCOM Labs, Inc. by:

A2LA ACCREDITED
TESTING CERT #2381.01

Graeme Grieve
Quality Manager MiCOM Labs,

Gordon Hurst
President & CEO MiCOM Labs, Inc.

2.2 Test and Uncertainty Procedures

Conducted and radiated emission measurements were conducted in accordance with American National Standards Institute ANSI C63.4, listed in the Normative References section of this report.

Measurement uncertainty figures are calculated in accordance with ETSI TR 100 028 Parts 1 and 2.

Measurement uncertainties stated are based on a standard uncertainty multiplied by a coverage factor k = 2, providing a level of confidence of approximately 95 % in accordance with UKAS document M 3003 listed in the Normative References section of this report.

3 PRODUCT DETAILS AND TEST CONFIGURATIONS

3.1 Technical Details

Details	Description
Purpose:	Test of the Thinkify LLC T265R to FCC 47 CFR Part 90 SubPart M, 90.353 regulations.
Applicant:	Thinkify LLC 18450 Technology Drive, Suite E1 Morgan Hill, California 95037, USA
Manufacturer:	As Applicant
Laboratory performing the tests:	MiCOM Labs, Inc. 575 Boulder Court, Pleasanton, California 94566 USA
Test report reference number:	THNK15-U2 Rev A
Date EUT received:	13th August, 2018
Dates of test (from - to):	7th- 10th September, 2018
Standard(s) applied:	FCC 47 CFR Part 90 SubPart M, 90.353
No of Units Tested:	1
Type of Equipment:	High Speed Wireless Programmer
Model:	T265R
Location for use:	Indoor
Declared Frequency Range(s):	902 – 904 MHz & 909.75 - 921.75 MHz
Type of Modulation:	CW, OOK
Operational Bandwidths:	CW: 16 kHz OOK: 90 kHz
Declared Maximum Output Power:	46.0 mW
Transmit/Receive Operation:	Transceiver
Software Revision:	3.0.6
Rated Input Voltage and Current:	120Vac 60 Hz Power Supply Unit 10 Vdc,2A : 6 Vdc,2A : -5Vdc/0.5A
Operating Temperature Range:	-20ºC to +50ºC
Frequency Stability:	Long Term: ±20ppm
Equipment Dimensions:	18cm x 28cm x 8cm
Weight:	2.7 kg
Primary function of equipment:	RFID Reader
Firmware Rev:	4.4.0
Hardware Rev	TR-65 Rev.B

3.2 Scope of Test Program

The scope of the test program was to test the Thinkify LLC T265R for compliance against;-

FCC 47 CFR Part 90, Subpart M regulatory requirements.

The Thinkify LLC T265R has two operational modes Continuous Wave and Modulated OOK and operates in the range 902 – 904 MHz and 909.75 - 921.75 MHz.

Transmission Restrictions

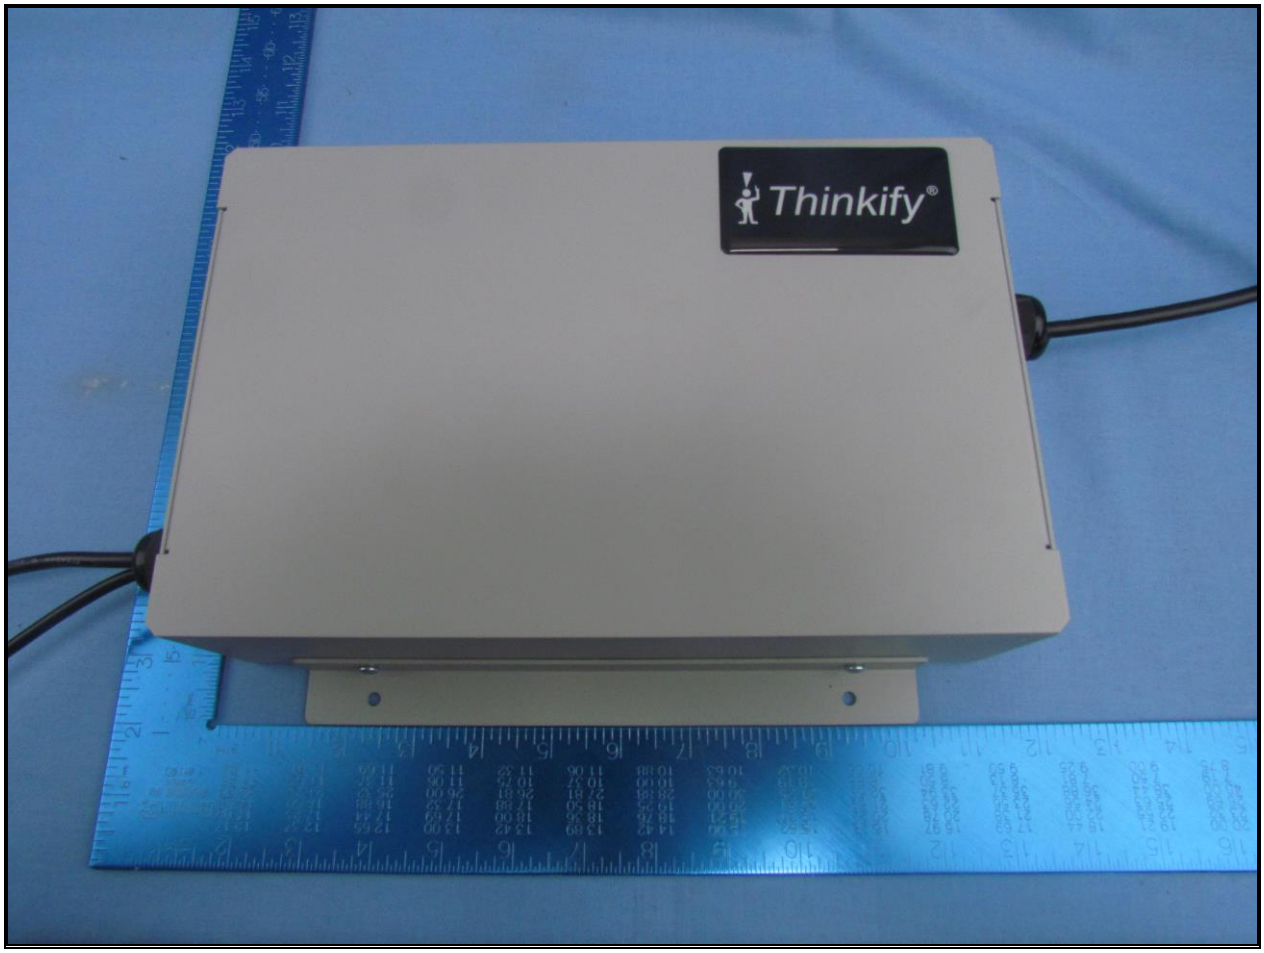
The Thinkify LLC T265R RFID Reader per Part 90 SubPart M, 90.357 falls into category (b) Non- multilateriation LMS systems authorized in the following frequency bands:

- 902 – 904 MHz
- 909.75 - 921.75 MHz

Definition of Non-Multilateration LMS System.

A non-multilateration LMS system employs any of a number of non-multilateration technologies to transmit information to and/or from vehicular units.

Thinkify LLC T265R



3.3 Equipment Model(s) and Serial Number(s)

Type (EUT/ Support)	Equipment Description (Including Brand Name)	Mfr	Model No.	Serial No.
EUT	RFID Reader	Thinkify LLC	T265R	TR-65
Support	Laptop PC	Dell	E5440	None

3.4 Antenna Details

Type	Manufacturer	Model Number	Gain (dBi)	Frequency Band (MHz)
External Dipole	Linx Technologies	TAL-010	1.2	900-930

3.5 Cabling and I/O Ports

Port Type	Max Cable Length	# Of Ports	Screened	Conn Type	Data Type
Ethernet	< 3	1	N	Ethernet	Digital
AC/DC	N/A	1	Y	Power	N/A

3.6 Test Configurations

Parameter	Standard Section #	Operational Mode	Test Conditions
Occupied Bandwidth	2.1049/ 90.210	CW, OOK	Ambient, Nominal Vdc
Effective Radiated Power	2.1046/ 90.205		
Exposure to Mobile Devices	2.1091/ 90.1217	Calculated	--
Frequency Stability	2.1055/ 90.213	CW	Ambient, -20ºC, 50ºC Nominal & Extremes of Voltage[1]
Audio Frequency Response	TIA EIA-603.3.2.6	--	N/A[2]
Audio Low-Pass Filter Response	TIA EIA-603.3.2.6	--	N/A[2]
Conducted Spurious Emissions	2.1053/ 90.210	CW	Ambient, Nominal Vdc
Radiated Spurious Emissions	2.1053/ 90.210	CW	Ambient, Nominal Vdc
Transient Frequency Response	90.214	--	N/A[3]
Digital Radiated Emissions	15.109	CW	Ambient, Nominal Vdc
AC Wireline Emissions	15.107	CW	Ambient, Nominal Vdc

Note 1.. Fixed Non-Multilateration transmitters with an authorized bandwidth more than 40 kHz from the band-edge are not subject to Frequency Stability restrictions. The EUT was measured to show compliance with Part 2 requirements.
Note 2.. The EUT does not support audio modulation therefore Audio Frequency Response and Audio Low-Pass Filter Response testing was not performed
Note 3.. The EUT is not a keyed carrier system therefore Transient Frequency Behavior was not performed

Test Frequencies

Frequency Band (MHz)	Data Rate KBit/S	Frequency Channel (MHz)		
		Low	Mid	High
902.00 – 904.00	110	902.75	903.00	903.75
909.75 – 921.75	110	910.75	915.75	920.75

Voltage Variation Tolerance
The input voltage to the T265R was varied by 10% in order to determine the EUT's tolerance to differing voltage conditions. Test conditions;

USB 5 Vdc
Location of voltage, on PCB, EUT transmitting max power.

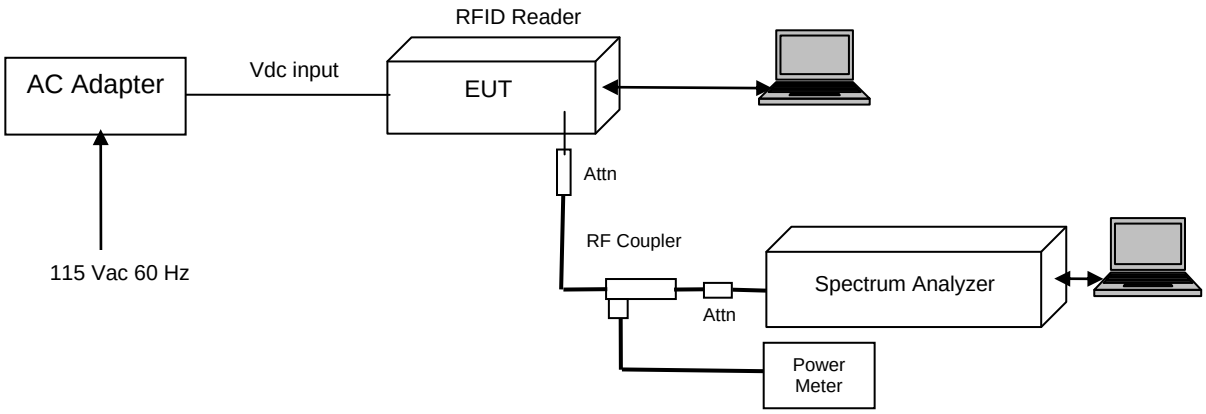
Nominal Input Voltage: +5.0 Vdc
Minimum Voltage: +4.50 Vdc
Maximum Voltage: +5.50 Vdc

Input Voltage (Vdc)	5.0 Vdc	Δ%
120.00	5.00	
108.00	5.00	-0.0
132.00	5.00	-0.0

As can be observed a 10% input voltage variation caused little or no change in voltage fed to the wireless chipset @ 5.0 Vdc

Test Set-Up

Test software was available to exercise the RFID Reader and the equipment was tested using the following test configuration.



Conducted Test Set-Up

3.7 Equipment Modifications

The following modifications were required to bring the equipment into compliance:

1. NONE

3.8 Deviations from the Test Standard

The following deviations from the test standard were required in order to complete the test program:

1. NONE

3.9 Subcontracted Testing or Third Party Data

1. NONE

4 TEST MEASUREMENT SETUP

4.1 Conducted

Conducted RF Emission Test Set-up(s)

Test	Report Section
Occupied Bandwidth	6.1
Effective Radiated Power	6.2

5 TEST SUMMARY

List of Measurements

The following table represents the list of measurements required under the **FCC CFR47 Part 90**, **Subpart M.**

Section(s)	Test Items	Description	Condition	Result	Test Report Section
2.1049/ 90.210	99% Occupied Bandwidth	Bandwidth measurement(s)	Conducted	Complies	6.1
2.1046; 90.205	Effective Radiated Power	CW & Modulated Output Power	Conducted	Complies	6.2
2.1055(a)(1)/ 90.213	Frequency Stability	Includes temperature and voltage variations	Conducted	Complies	6.3
2.1051; 90.210(K)	Conducted Spurious Emissions	Emissions from the antenna port	Conducted	Complies	6.4
2.1053; 90.210 ANSI/TIA-603	Radiated Spurious Emissions	Spurious emissions from Transmitter	Radiated	Complies	6.5
15.109	Radiated Spurious Emissions	Spurious emissions from digital apparatus	Radiated	Complies Class A Device	6.6
15.107	AC Wireline Conducted	Emissions 150 kHz–30 MHz	Conducted	Complies Class A Device	6.7

Note 1: Test results reported in this document relate only to the items tested
Note 2: The required tests demonstrated compliance as per client declaration of test configuration, monitoring methodology and associated pass/fail criteria
Note 3: Section 3.7 'Equipment Modifications' highlight the equipment modifications that were required to bring the product into compliance with the above matrix

6 TEST RESULTS

6.1 Occupied Bandwidth

Conducted Test Conditions for 99% Bandwidth			
Standard:	FCC CFR 47:90.353	**Ambient Temp. (ºC):**	24.0 - 27.5
Test Heading:	99 % Bandwidth	**Rel. Humidity (%):**	32 - 45
Standard Section(s):	2.1049, 90.210 (K)	**Pressure (mBars):**	999 - 1001
Reference Document(s):	See Normative References		

Test Procedure for 99% Bandwidth Measurement
The transmitter terminal of EUT was connected to the input of the spectrum analyzer set to measure the 99% occupied bandwidth. The system highest power setting was selected with modulation ON and OFF (CW mode).

The measurement of channel bandwidth used a resolution bandwidth of at least one percent of the occupied bandwidth of the fundamental emission and a video bandwidth higher than the RBW.

Test configuration and setup used for the measurement was per the Conducted Test Set-up section specified in this document.

Test Results for Occupied Bandwidth

Equipment Configuration for 99% Occupied Bandwidth			
Variant:	CW	**Duty Cycle (%):**	99
Data Rate:	110 KBit/s	**Antenna Gain (dBi):**	1.20

6.2 Effective Radiated Power

Conducted Test Conditions for Effective Radiated Power			
Standard:	FCC CFR 47:90.353	**Ambient Temp. (ºC):**	24.0 - 27.5
Test Heading:	Effective Radiated Power	**Rel. Humidity (%):**	32 - 45
Standard Section(s):	90.205(l)	**Pressure (mBars):**	999 - 1001
Reference Document(s):	See Normative References		

Test Procedure for Effective Radiated Power Measurement
The following power limits apply to the 902 – 928 MHz frequency band MHz band. Power is limited to 30W (44.7 dBm) equivalent effective radiated power (ERP).
ERP (dBm) = Transmit Power (dBm) + Antenna Gain (dBi) – Antenna Conversion to ERP (2.14dB)

Antenna Gain = 1.20 dBi

ERP (dBm) = Transmit Power (dBm) + 1.20 dBi -2.14 dB

Test Procedure
Peak power measurements were measured with the use of a peak power head. The system highest power setting was selected with modulation OFF (CW) and ON (OOK).

Equipment Configuration for Effective Radiated Power			
Variant:	CW	**Duty Cycle (%):**	99.0

6.3 Frequency Stability; Temperature Variations, and Voltage Variations

Conducted Test Conditions for Frequency Stability			
Standard:	FCC CFR 47:90.353	**Ambient Temp. (ºC):**	24.0 - 27.5
Test Heading:	Frequency Stability	**Rel. Humidity (%):**	32 - 45
Standard Section(s):	90.213	**Pressure (mBars):**	999 - 1001
Reference Document(s):	See Normative References		

Test Procedure for Frequency Stability Measurement
The transmitter output was connected to a spectrum analyzer and the frequency stability was measured in a CW (un-modulated) operational mode.

Frequency stability was measured through the extremes of temperature on the mid channel only. Before measurements were taken at each temperature the equipment waited until thermal balance was obtained.

Test Procedure
Peak power measurements were measured with the use of a peak power head. The system highest power setting was selected with modulation OFF (CW) and ON (OOK).

Measurement Results for Frequency Stability

Delta kHz and ppm were measured from the actual channel frequency **915.75** MHz

Limit per Pt 90.213 is ±2.5 ppm.

6.4 Conducted Spurious Emissions

Conducted Test Conditions for Transmitter Conducted Spurious Emissions			
Standard:	FCC CFR 47:90.353	**Ambient Temp. (ºC):**	24.0 - 27.5
Test Heading:	Max Unwanted Emission Levels	**Rel. Humidity (%):**	32 - 45
Standard Section(s):	2.1051, 90.210(k)	**Pressure (mBars):**	999 - 1001
Reference Document(s):	See Normative References		

Test Procedure for Transmitter Conducted Spurious Emissions Measurement
Transmitter Conducted Spurious emissions were measured at a limit of -25.00 dBm below the highest in-band spectral density measured with a spectrum analyzer connected to the antenna terminal. Measurements were made while EUT was operating in transmit mode of operation at the appropriate centre frequency closest to the band-edge. Emissions were maximized during the measurement and limits derived from the peak spectral power and drawn on each plot.

Where the device operated with multiple antenna ports i.e. MIMO device, each port was measured separately. Testing was performed under ambient conditions at nominal voltage only.

Test configuration and setup used for the measurement was per the Conducted Test Set-up specified in this document.

Limits
For operation in the 902 – 928 MHz band the limits are defined as the power of any emission outside the frequency band of operation being attenuated below the transmitter power (P) within the licensed band of operation, measured in Watts, by at least

55 + 10*Log (P) = -25 dBm.
P = Maximum Power = +16.22 dBm = 0.042 W
Attenuation = 41.22 dB
Limit = -25 dBm

6.5 Radiated Spurious Emissions - Transmitter

FCC CFR 47 2.1051, Part 90.210 (K), IC RSS-137 6.5.3
ANSI/TIA-603

Test Procedure

Measurements were made while EUT was operating in the worst case CW mode of operation at the appropriate center frequency. Substitution was performed on any emissions observed. The antenna port was attenuated with a 50 Ω termination.

The measurement equipment was set to measure in peak hold mode. The emissions were measured in the anechoic chamber at a 3-meter distance on every azimuth in both horizontal and vertical polarities. The emissions are recorded and maximized as a function of azimuth by rotation through 360° with a spectrum analyzer in peak hold mode.

The highest emissions relative to the limit are listed for each frequency band measured.

Limits

For operation in the 902 – 928 MHz band the limits are defined as the power of any emission outside the frequency band of operation being attenuated below the transmitter power (P) within the licensed band of operation, measured in Watts, by at least

55 + 10*Log (P) = -25 dBm.
P = Maximum Power = +16.22 dBm = 0.042 W
Attenuation = 41.22 dB
Limit = -25 dBm

6.6 Radiated Spurious Emissions – Digital Apparatus

FCC, Part 15 Subpart B §15.109
Industry Canada ICES-003 §5; RSS-GEN

Test Procedure

Testing was performed in a 3-meter semi-anechoic chamber. Preliminary radiated emissions were measured on every azimuth and with the receiving antenna in both horizontal and vertical polarizations. Preliminary emissions were recorded with in Spectrum Analyzer mode, using a maximum peak detector while in peak hold mode.

Emissions nearest the limits were chosen for maximization and formal measurement using a CISPR Compliant receiver. Emissions from 30 MHz – 1000 MHz are measured utilizing a CISPR compliant quasi-peak detector with a tuned receiver, using a bandwidth of 120 kHz. Emissions above 1000 MHz are measured utilizing a CISPR compliant average detector with a tuned receiver, using a bandwidth of 1 MHz. Only the highest emissions relative to the limit are listed.

Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Loss, and subtracting Amplifier Gain from the measured reading. All factors are included in the reported data.

FS = R + AF + CORR – FO

FS = Field Strength
R = Measured Spectrum analyzer Input Amplitude
AF = Antenna Factor

CORR = Correction Factor = CL – AG + NFL

CL = Cable Loss
AG = Amplifier Gain
FO = Distance Falloff Factor
NFL = Notch Filter Loss or Waveguide Loss

Field Strength Calculation Example:

Given receiver input reading of 51.5 dBμV; Antenna Factor of 8.5 dB; Cable Loss of 1.3 dB; Falloff Factor of 0 dB, an Amplifier Gain of 26 dB and Notch Filter Loss of 1 dB. The Field Strength of the measured emission is:

FS = 51.5 + 8.5 + 1.3 - 26.0 +1 = 36.3 dBμV/m

Conversion between dBμV/m (or dBμV) and μV/m (or μV) are done as:

Level (dBμV/m) = 20 * Log (level (μV/m))
40 dBμV/m = 100 μV/m
48 dBμV/m = 250 μV/m

Specification

Radiated Spurious Emissions – Digital Apparatus

FCC, Part 15 Subpart B §15.109; ISED ICES-003

A representative type or model of each digital apparatus shall be tested in accordance with the measurement methods described in FCC Part 15; Subpart A - General and FCC Subpart B – Unintentional Radiators.

FCC, Part 15 Subpart B §15.109; ISED ICES-003 Radiated Spurious Emissions Limits

Except for Class A digital devices, the field strength of radiated emissions from unintentional radiators at a distance of 3 meters shall not exceed the following values.

Frequency (MHz)	Field Strength (µV/m)	Field Strength (dBµV/m)	Measurement Distance (meters)
30-88	100	40.0	3
88-216	150	43.5	3
216-960	200	46.0	3
Above 960	500	54.0	3

Field Strength of radiated emissions for a Class A digital device are as follows.

Frequency (MHz)	Field Strength (µV/m)	Field Strength (dBµV/m)	Measurement Distance (meters)
30-88	100	49.5	3
88-216	150	54.0	3
216-960	200	57.0	3
Above 960	500	60.0	3

Laboratory Measurement Uncertainty for Spectrum Measurement

Measurement Uncertainty	+5.6/ -4.5 dB

6.6.1.1 Measurement Results for Radiated Spurious Emissions – Digital Apparatus

EUT is a Class A Digital Device. Class A limits were applied.

Test Notes: EUT powered by AC/DC PS and connected via HDMI to monitor for control purposes. 900 MHz notch in front of amp to prevent overloads. Digital Emissions Class A

6.7 Conducted Disturbance at Mains Terminal (150 kHz – 30 MHz)

FCC, Part 15 Subpart C §15.107
Industry Canada ICES-003 §5.3

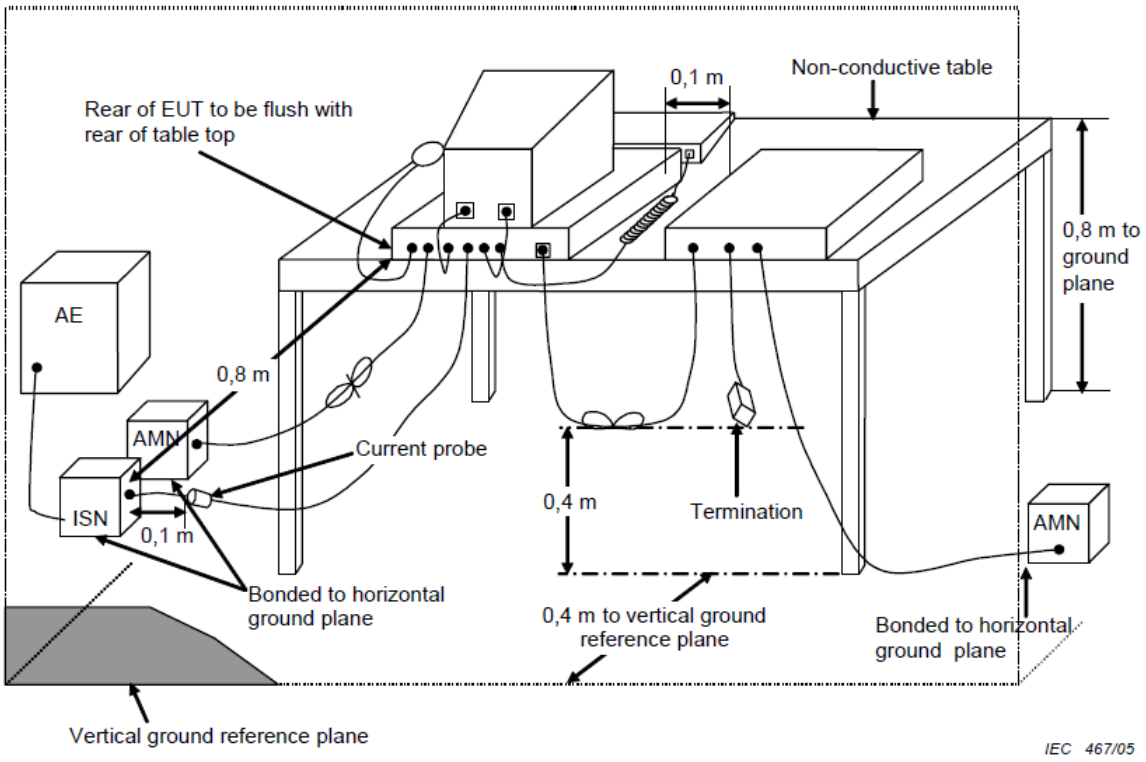
Test Procedure

The EUT is configured in accordance with ANSI C63.4. The conducted emissions are measured in a shielded room with a spectrum analyzer in peak hold in the first instance. Emissions closest to the limit are measured in the quasi-peak mode (QP) with the tuned receiver using a bandwidth of 9 kHz. The emissions are maximized further by cable manipulation. The highest emissions relative to the limit are listed.

If the average limit is met when using a quasi-peak detector receiver, the EUT shall be Deemed to meet both limits and measurement with the average detector receiver is unnecessary.

If the reading of the measuring receiver shows fluctuations close to the limit, the reading shall be observed for at least 15 s at each measurement frequency; the higher reading shall be recorded with the exception of any brief isolated high reading which shall be ignored.

Test Measurement Set up



Measurement set up for Conducted Disturbance at Mains Terminals

Specification

Conducted Disturbance at Mains Terminal – Digital Apparatus

FCC, Part 15 Subpart B §15.107
(a) Except for Class A digital devices, for equipment that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50 μH/50 ohms line impedance stabilization network (LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the band edges.

(b) For a Class A digital device that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50 μH/50 ohms LISN. Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequency ranges.

Industry Canada ICES-003
For power line conducted emissions and radiated emissions measurements below 1 GHz, compliance with ICES-003, Issue 6, can be demonstrated in one of three ways:

i. by complying with the power line conducted emission limits and radiated emissions limits and employing the methods of measurement contained in the publication referenced in Section 3(a) (CAN/CSA-CISPR 22-10);
ii. by complying with the power line conducted emission limits and radiated emissions limits, shown in Section 6 of this ICES-003 (Issue 6), and employing the methods of measurement described in the publication referenced in Section 3(b) (ANSI C63.4-2014); or
iii. by complying with the power line conducted emissions limits in Section 6 of ICES-003, Issue 6, and the radiated emissions limits contained in the publications referenced in Section 3(a) (CAN/CSA-CISPR 22-10), while employing the methods of measurement contained in the publication referenced in Section 3(b) (ANSI C63.4-2014).

FCC, Part 15 Subpart B §15.107 & Industry Canada ICES-003 Limits

Limits for conducted disturbance at the mains ports of class B ITE

Frequency of emission (MHz)	Quasi-peak dBuV	Average dBuV
0.15–0.5	66 to 56*	56 to 46*
0.5–5	56	46
5–30	60	50
Note 1	* Decreases with the logarithm of the frequency	
Note 2	* The lower limit applies at the boundary between frequency ranges	

Limits for conducted disturbance at the mains ports of class A ITE

Frequency of emission (MHz)	Quasi-peak dBuV	Average dBuV
0.15–0.5	79	66
0.5–30	73	60
Note 1	* The lower limit shall apply at the transition frequency.	

Laboratory Measurement Uncertainty for Conducted Emissions

Measurement uncertainty	±2.64 dB

6.7.1.1 Conducted Disturbance at Mains Terminal (150 kHz – 30 MHz)
