To whom it may concern:

Regarding the Model BTM875, Bluetooth Stereo FLASH Module. TEAC is aware that Bluetooth low energy mode is not an allowable mode of operation in all products with the module.

The Bluetooth low energy mode will not be available in all TEAC test instrument for the host products that use the module. The host firmware that resides inside a TEAC test instrument limits the Bluetooth mode of operation to classic Bluetooth mode (BDR and EDR) only, the module will not operate or transmit without the firmware in the host, so the classic Bluetooth mode is the only mode of Bluetooth operation.

Sincerely Yours,

Akira Sekiguchi

(Manager)

TEAC Corporation
