

### SAR Test Exclusion Thresholds for 100 MHz – 6 GHz and ≤ 50 mm

Approximate SAR Test Exclusion Power Thresholds at Selected Frequencies and Test Separation Distances are illustrated in the following Table.

EUT has Wi-Fi transmitter operating in 2400 – 2483.5 MHz and 5,150 – 5,250 MHz bands.

For the purposes of this evaluation the EUT EIRP power was compared with the limits in the table below to determine the minimum separation distance. The EUT meets the limits in the grayed out cells below.

EUT has Wi-Fi transmitter operating in 2400 – 2483.5 MHz and 5,150 – 5,250 MHz bands.

### Wi-Fi – highest measured power

Frequency (MHz)	Maximum Power (dBm)	Maximum Antenna Gain (dBi)	EIRP (dBm)	EIRP (mW)
2462	8.47	-1.5	8.47	7.03
5180	3.08	3.3	6.38	4.35

**EIRP = the highest value of either conducted power or EIRP.**

The EIRP values were compared with the limits for exclusion of SAR evaluation. The EUT meets the limits at minimum separation distance of 5 mm.

**2462 MHz;** The maximum EIRP is 7.03 mW < 10 mW (limit for exclusion threshold at 5mm)

**5180 MHz;** The maximum EIRP is 4.35 mW < 7 mW (limit for exclusion threshold at 5mm)

**Conclusion: No SAR required**
