

DFS client device channel plan and software operational declaration

Date: 2015-11-24

We, Coppernic, declare that the device, FCC ID: XGK-C-ONE-E-ID Model Name: c-One e-ID, MR 2250, C-One e-ID NR, MR 2150, does not have "Ad Hoc on non-US frequencies" and/or "on DFS frequencies. Also, the client software and associated drivers will not initiate any transmission on DFS frequencies without initiation by a master. This includes restriction on transmissions for beacons and support for ad-hoc peer-to-peer modes.

Below is the channel / frequency plan for the device

Also, on DFS channels, the WLAN driver in the device operates under the control of an AP at all times, except when in ad-hoc mode, on US non-DFS channels. The device passively scans DFS frequencies until a master device is detected. The control of this functionality is
