Federal Communications Commission
7435 Oakland Mills Road
Columbia MD 2046

FCC ID: XIA-NTC140

To Whom It May Concern,

Pursuant to the provisions of FCC Part 22, 24 and 27 this project entails a new FCC filing of NetComm's NTC-140-01 cellular router. This product (NTC-140-01) is a depopulated version of the already certified NTC-140W-01 router. The NTC-140-01 has Wi-Fi and GPS removed from the printed circuit board. In addition the antennas have been changed to NetComm's model ANT-0050. The ANT-0050 antenna has higher gains than the antenna originally tested with the full product version (NTC-140W-01).

Sporton International Test Lab Report Nos. FG441109A and FG441109B are used to demonstrate compliance with antenna port direct connect requirements. Spot checks of conducted output power were made to confirm applicability of these reports. The cellular radio is identical to the one used in this filing. Element Test Report No. NETC0005 documents compliance of radiated power and radiated out of band emissions of this new device.

Sincerely,

A handwritten signature in black ink, appearing to read "Bud Sundeen".
