Re: Class II Permissive Change

FCC ID: XIA-NTC620002

To Whom It May Concern,

Pursuant to part 2.1043 of CFR 47 NetComm Wireless Limited is requesting a Class II permissive change for the use of an alternate antenna. Note that there are no changes to the NTC-6200-02 print circuit board assembly. In addition an alternate model will be part of the permissive change. The NTC-6200-02 was originally certified with A-Lead antenna P.N. AAL-TT42UM70J9. The alternate antenna P.N. ANT-0050-2/ANT-0050-8 uses either a 2 foot coax cable or an 8 foot coax cable in a magnetic mount type assembly. The new antenna also requires the use of an SMA to SMB adapter as show below. The adapter simply connects to the SMA on the NTC-6200-02 router and the antenna coax cable plugs into the other end of the adapter connecting the antenna to the NTC-6200-02 router

The other part of this permissive change is to add model MAX 6200-V1. This is for marketing purposes only.

Sincerely,

Bud Sundeen
