1.2 Statement of compliance

Compliance

In the configuration tested the EUT was found compliant

Yes 🖂 No □

This report contains an assessment of apparatus against specifications based upon tests carried out on samples submitted at Nemko Canada Inc. These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 24. Radiated tests were conducted in accordance with ANSI C63.4-2003.

1.6 Limits of responsibility

Note that the results contained in this report relate only to the items tested and were obtained in the period between the date of initial receipt of samples and the date of issue of the report.

This test report has been completed in accordance with the requirements of ISO/IEC 17025. Nemko Spa authorizes the applicant to reproduce this report provided it is reproduced in its entirety and for use by the company's employees only.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such

Nemko Spa accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Section 2: Summary of test results

2.1 FCC Part 24, test results			
Part	Methods	Test description	Verdict
	§ 935210 D05v01r01 (3.2)	AGC threshold	Pass
	§ 935210 D05v01r01 (3.3)	Out of band rejection	Pass
§24.131	§ 935210 D05v01r01 (3.4)	Occupied bandwidth	Pass
§24.132(c)	§ 935210 D05v01r01 (3.5)	Peak output power at RF antenna connector	Pass

3.9 Operation of the EUT during testing

Details:

In down-link direction, normal working at max gain with max RF power output.

3.10 EUT setup diagram

In this system, Remote Unit is the EUT. Master Unit includes only management module and optical module (to convert RF signal in optical signal in down link direction and viceversa optical signal in RF signal in up link direction). As described in "Operational description", master unit is connected directly to base station, so the system doesn't use another equipment (under another FCC ID) to exercise the EUT. Signal generator is linked directly to the RF connector of optical module in the Master Unit.

Test setup for output power, occupied bandwidth, spurious emissions:

Procedure

Connect the signal modulated generator to the input of the EUT, so that the EUT works at the max gain. Raise the input level to the EUT until reach the maximum output power. Connect the spectrum analyzer to the RF output connector of the EUT.

Judgment

None

Specification: FCC 24

4.1 Modifications incorporated in the EUT Modifications Modifications performed to the EUT during this assessment None Yes ☐, performed by Client ☐ or Nemko ☐ Details: 4.2 Deviations from laboratory tests procedures Deviations Deviations from laboratory test procedures None ☐ Yes ☐ - details are listed below: 4.3 Technical judgment

Specification: FCC 24

Section 5: Test conditions

Deviations from laboratory tests procedures

No deviations were made from laboratory test procedures.

5.2 Test condition	5.2 Test conditions, power source and ambient temperatures				
Normal temperature, humidity and air pressure test conditions	Temperature: 15–30 °C Relative humidity: 20–75 % Air pressure: 86–106 kPa				
	When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.				
Power supply range:	The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages ±5 %, for which the equipment was designed.				

Specification: FCC 24

Section 5: Test conditions, continued

5.3 Measurement uncertainty

Nemko S.p.A. measurement uncertainty has been calculated using the standard CISPR 16-4-2 "Specification for radio disturbance and immunity measuring apparatus and methods – Part 4-2: Uncertainties, statistics and limit modeling – Uncertainty in EMC measurements". All calculations can be found in Nemko S.p.A. document WML1002.

Test data

Specification: FCC 24

Clause 24.131 Occupied bandwidth

The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power.

Test date: 06/27/2017

Test results: Pass

Special notes

Clause 24.131 Occupied bandwidth, continued

Test data

iDEN signal, nominal input signal

iDEN signal, nominal input signal + 3dB

Output Input

Nèmko

Product: TRU7FL8P9PPWE/AC-WT

Specification: FCC 24

Clause 24.132(c) Peak output power at RF antenna connector

(c) Base stations transmitting in the 930-931 MHz and 940-941 MHz bands are limited to 3500 watts e.r.p. per authorized channel and are unlimited in antenna height except as provided in paragraph (d) of this section.

Test date: 06/27/2017

Test results: Pass

Special notes

Specification: FCC 24

Clause 24.132(c) Peak output power at RF antenna connector

Test data

iDEN signal, nominal input signal

Test data					
Direction	Modulation	Frequency (MHz)	RF output Power (dBm)	RF output channel Power (W)	PAR (dB)
Down-link	iDEN (25kHz)	940.5	31.03	1.27	8.74

PAR measure is performed by the "CCDF" function installed on Spectrum analyzer that provides average power (the same measured with "Channel power" function), peak power and PAR.

iDEN signal, nominal input signal + 3dB

Test data				
Direction	Modulation	Frequency (MHz)	RF output Power (dBm)	RF output channel Power (W)
Down-link	iDEN (25kHz)	940.5	31.79	1.51

Specification: FCC 24

Clause 24.133 Spurious emissions at RF antenna connector

- (a) The power of any emission shall be attenuated below the transmitter power (P), as measured in accordance with §24.132(f), in accordance with the following schedule:
 - (1) For transmitters authorized a bandwidth greater than 10 kHz:
 - (i) On any frequency outside the authorized bandwidth and removed from the edge of the authorized bandwidth by a displacement frequency (fd in kHz) of up to and including 40 kHz: at least 116 Log10 ((fd+10)/6.1) decibels or 50 plus 10 Log10 (P) decibels or 70 decibels, whichever is the lesser attenuation;
 - (ii) On any frequency outside the authorized bandwidth and removed from the edge of the authorized bandwidth by a displacement frequency (fd in kHz) of more than 40 kHz: at least 43+10 Log10 (P) decibels or 80 decibels, whichever is the lesser attenuation.
 - (2) For transmitters authorized a bandwidth of 10 kHz:
 - (i) On any frequency outside the authorized bandwidth and removed from the edge of the authorized bandwidth by a displacement frequency (fd in kHz) of up to and including 20 kHz: at least 116×Log10 ((fd+5)/3.05) decibels or 50+10×Log10 (P) decibels or 70 decibels, whichever is the lesser attenuation;
 - (ii) On any frequency outside the authorized bandwidth and removed from the edge of the authorized bandwidth by a displacement frequency (fd in kHz) of more than 20 kHz: at least 43+10 Log 10 (P) decibels or 80 decibels, whichever is the lesser attenuation.

Test date: 06/27/2017	
Test results: Pass	

Special notes			

Clause 24.133 Spurious emissions at RF antenna connector, continued

Test data			
See Plots below			
Spurious emissions me	asurement results:		
Frequency (MHz)	Spurious emission (dBm)	Limit (dBm)	Margin (dB)
Low channel			
First channel	Negligible	-13	
Mid channel			
940,5 MHz	Negligible	-13	
High channel			
Last channel	Negligible	-13	

Test data: spurious emissions at antenna terminal

iDEN signal

(Plots are referred to modulated carrier at the Middle Channel)

Test data, continued: band edges Inter modulation

iDEN signal, nominal input signal

The in-band signal between the two tones is internally generated by the "multicarrier" feature of the signal generator

The in-band signal between the two tones is internally generated by the "multicarrier" feature of the signal generator

MSK signal, nominal input signal + 3dB

Appendix B: Block diagrams

The in-band signal between the two tones is internally generated by the "multicarrier" feature of the signal generator

The in-band signal between the two tones is internally generated by the "multicarrier" feature of the signal generator

Nèmko

Test date: 06/28/2017

Specification: FCC 24

Product: TRU7FL8P9PPWE/AC-WT

Clause 24.133 Radiated Spurious emissions

a) Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 Log (P) dB.

Test results: Pass		
Special notes		

Specification: FCC 24

Clause 24.133 Radiated spurious emissions, continued

Test data

The D.U.T. was positioned according to the radiated emissions set-up

The D.U.T. antenna connector was terminated by a 50 Ω shielded dummy load.

The spectrum was searched from 30 MHz to 1 GHz (RBW 100 kHz) & 1 GHz (RBW 1 MHz) to the tenth harmonic of the carrier.

There were no emissions detected above the noise floor which was at least 20 dB below the specification limit.

Spurious emissions measurement results:

Frequency (MHz)	Polarization. V/H	Field strength (dBµV/m)	Limit (dBµV/m)	Margin (dB)
Low channel	VIII	(αυμν/ιιι)	(αΒμν/ιιι)	(d <i>b</i>)
Low chamici				
Mid channel				
High channel	1	1	1	T

Note: Field strength includes correction factor of antenna, cable loss, amplifier, and attenuators where applicable.
