# Section 1: Report summary

1.1 Test spo	1.1 Test specification		
Specifications	Part 22 Subpart E, Paging and radiotelephone service		

1.2 Statement of compliance		
Compliance	In the configuration tested the EUT was found compliant Yes No This report contains an assessment of apparatus against specifications based upon tests carried out on samples submitted at Nemko Spa. These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 22. Radiated tests were conducted in accordance with ANSI C63.26-2015.

### 1.6 Limits of responsibility

Note that the results contained in this report relate only to the items tested and were obtained in the period between the date of initial receipt of samples and the date of issue of the report.

This test report has been completed in accordance with the requirements of ISO/IEC 17025. Nemko Spa authorizes the applicant to reproduce this report provided it is reproduced in its entirety and for use by the company's employees only.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties.

Nemko Spa accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

# Section 2: Summary of test results

Part	Methods	Test description	Verdict
	§ 935210 D05v01r03 (3.2)	AGC threshold	Pass
	§ 935210 D05v01r03 (3.3)	Out of band rejection	Pass
§22.531	§ 935210 D05v01r03 (3.4)	Occupied bandwidth	Pass
§22.535	§ 935210 D05v01r03 (3.5)	Peak output power at RF antenna connector	Pass
§22.359	§ 935210 D05v01r03 (3.6)	Spurious emissions at RF antenna connector	Pass
§22.359	§ 935210 D05v01r03 (3.8)	Radiated spurious emissions	Pass
§22.355	§ 935210 D05v01r03 (3.7)	Frequency stability	N/A a)
Notes:			
		Modulation/frequency conversion circuitry not in t EUT (input and output have same frequency)	use. No

3.5 Composite	/related equipment
a) Composite equipment	The EUT is a composite device subject to an additional equipment authorization
equipment	Yes 🛛 No 🗌
b) Related	The EUT is part of a system that operates with, or is marketed with,
equipment	another device that requires an equipment authorization
	Yes 🗌 No 🖂
c) Related FCC ID	If either of the above is "yes":
	has been granted under the FCC ID(s) listed below:
	is in the process of being filled under the FCC ID(s) listed below:
	is pending with the FCC ID(s) listed below:
	has a mix of pending and granted statues under the FCC ID(s)
	listed below:
	i FCC ID: XM2-MP7FL8P9PP
	ii FCC ID:

3.6 Sample inf	ormation
Receipt date:	05/27/2019
Nemko sample ID number:	

3.7 EUT techn	ical specifications
Operating band:	Down Link 931-932 MHz
Operating frequency:	Narrowband
Modulation type:	P25, FM
Occupied bandwidth:	standard
Channel spacing:	standard
Emission designator:	F1E, F1D, F3E
RF Output	Down Link: 33dBm (2,00W) Up Link: N.A. (The EUT does not transmit over the air in the up-link direction)
Gain	Down Link: 38dB Up Link: N.A. (The EUT does not transmit over the air in the up-link direction)
Antenna type:	External Antenna is not provided, equipment that has an external 50 $\Omega$ RF connector
Power source:	100-240 Vac

#### Section 3: Equipment under test

	d support equipment
The following information id	lentifies accessories used to exercise the EUT during testing:
Item # 1	
Type of equipment:	Master Unit - Subrack
Brand name:	Teko Telecom srl
Model name or number:	SUB-TRX-PSU
Serial number:	101083001
Nemko sample number:	
Connection port:	
Cable length and type:	
Item # 2	
Type of equipment:	Master Unit – Management Module
Brand name:	Teko Telecom srl
Model name or number:	TSPV-R
Serial number:	110942253
Nemko sample number:	
Connection port:	LAN port
Cable length and type:	
Item # 3	
Type of equipment:	Master Unit – Optical Module
Brand name:	Teko Telecom srl
Model name or number:	TTRU4W-S-M
Serial number:	110679007
Nemko sample number:	
Connection port:	DL/UL RF connector (to connect to the base station)
	Optical port (to connect to remote unit)
Cable length and type:	
Item # 4	
Type of equipment:	Master Unit – Power Supply
Brand name:	Teko Telecom srl
Model name or number:	TPSU/AC
Serial number:	081063004
Nemko sample number:	
Connection port:	
Cable length and type:	

3.9 Operation	of the EUT during testing
Details:	In down-link direction, normal working at max gain with max RF power output.
3.10 EUT setur	o diagram
optical module (to co signal in RF signal ir connected directly to FCC ID) to exercise module in the Maste	bet Unit is the EUT. Master Unit includes only management module and onvert RF signal in optical signal in down link direction and viceversa optical in up link direction). As described in "Operational description", master unit is base station, so the system doesn't use another equipment (under another the EUT. Signal generator is linked directly to the RF connector of optical r Unit.
	I modulated nerator EUT Spectrum Analyzer
max gain. Raise the	nodulated generator to the input of the EUT, so that the EUT works at the input level to the EUT until reach the maximum output power. Connect the to the RF output connector of the EUT.

# Section 4: Engineering considerations

Modifications     Modifications performed to the EUT during this assessment       None ⊠     Yes □, performed by Client □ or Nemko □       Details:	4.1 Modification	ns incorporated in the EUT
Botallor		5

4.2 Deviations	from laboratory tests procedures
Deviations	Deviations from laboratory test procedures
	None 🖂 Yes 🗌 - details are listed below:

4.3 Technical	judgment
Judgment	None

# Section 5: Test conditions

# 5.1 Deviations from laboratory tests procedures

No deviations were made from laboratory test procedures.

5.2 Test condit	tions, power source and ambient temperatures
Normal temperature, humidity and air pressure test conditions	Temperature: 15–30 °C Relative humidity: 20–75 % Air pressure: 86–106 kPa
	When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.
Power supply range:	The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages $\pm 5$ %, for which the equipment was designed.

# Clause 935210 D05v01 (3.2) AGC threshold

Measure of EUT AGC Threshold

Test date: 05/27/2019 to 06/24/2019 Test results: Pass

Special notes

#### Test data

16k signal, nominal input signal

P25 signal, nominal input signal

16k signal, nominal input signal+1

P25 signal, nominal input signal+1

### Clause 935210 D05v01 (3.3) Out of band rejection

Out of Band Rejection - Test for rejection of out of band signals.

#### Test date: 05/27/2019 to 06/24/2019 Test results: Pass

Special notes

#### Test data

### Clause 22.531 Occupied bandwidth

The following channels are allocated for assignment to base transmitters that provide paging service, either individually or collectively under a paging geographic area authorization. Unless otherwise indicated, all channels have a bandwidth of 20 kHz and are designated by their center frequencies in MegaHertz.

Test date: 05/27/2019 to 06/24/2019

Test results: Pass

### Clause 22.535 Peak output power at RF antenna connector

The effective radiated power (ERP) of transmitters operating on the channels listed in §22.531 must not exceed the limits in this section.

(a) Maximum ERP. The ERP must not exceed the applicable limits in this paragraph under any circumstances. Frequency range: 931-932MHz. Maximum ERP 3500Watts.

Test date: 05/27/2019 to 06/24/2019 Test results: Pass

Special notes

P25

#### Clause 22.359 Spurious emissions at RF antenna connector

#### § 22.359(a)

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log (P) dB$ 

#### § 22.359(b)

Compliance with these rules is based on the use of measurement instrumentation employing a resolution bandwidth of 30 kHz or more. In the 60 kHz bands immediately outside and adjacent to the authorized frequency range or channel, a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. A narrower resolution bandwidth is permitted in all cases to improve measurement accuracy provided the measured power is integrated over the full required measurement bandwidth (i.e., 30 kHz or 1 percent of emission bandwidth, as specified). The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power.

Test date: 05/27/2019 to 06/24/2019 Test results: Pass

#### Clause 22.359 Radiated Spurious emissions

#### § 22.359(a)

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log (P) dB$ 

#### § 22.359(b)

Compliance with these rules is based on the use of measurement instrumentation employing a resolution bandwidth of 30 kHz or more. In the 60 kHz bands immediately outside and adjacent to the authorized frequency range or channel, a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. A narrower resolution bandwidth is permitted in all cases to improve measurement accuracy provided the measured power is integrated over the full required measurement bandwidth (i.e., 30 kHz or 1 percent of emission bandwidth, as specified). The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power.

Test date: 05/27/2019 to 06/24/2019 Test results: Pass

Special notes

#### Clause 22.359 Radiated spurious emissions, continued

#### Test data

The D.U.T. was positioned according to the radiated emissions set-up

The D.U.T. antenna connector was terminated by a 50  $\Omega$  shielded dummy load.

The spectrum was searched from 30 MHz to 1 GHz (RBW 100 kHz) & 1 GHz (RBW 1 MHz) to the tenth harmonic of the carrier.

There were no emissions detected above the noise floor which was at least 20 dB below the specification limit.

Spurious emissions measurement results:

Frequency	Polarization.	Field strength	Limit	Margin
(MHz)	V/H	(dBm)	(dBm)	(dB)
Low channel				1
First Channel	V/H	Negligible	-13	
Mid channel				
931.5	V/H	Negligible	-13	
High channel				
Last Channel	V/H	Negligible	-13	

Note: Field strength includes correction factor of antenna, cable loss, amplifier, and attenuators where applicable.
