**SUBJECT: Test Frequency Selection**

To whom it may concern

The selected frequencies, transmit 479.575 MHz and receive 464.975 MHz, on which testing was carried out, were chosen as to be representative of a licensed frequency pair defined by the band allocations specified in 47 CFR Part 90 / RSS-119.

The selected frequencies are believed to be representative of the performance of the radio across the frequency range that certification is being sought.

This decision was made based upon pretesting by MiMOMax Wireless Ltd that showed that the performance of the radio is constant / identical across the operation range of the MiMOMax transceiver model type MWL-TORNADO-\*A/B/CA/B\*.

Yours Faithfully

A handwritten signature in blue ink, appearing to read "Paul Daigneault". The signature is fluid and cursive, with a large loop at the end.
