1 The Basics

1.1 Introduction Thank you for choosing the GS200 GPS Tracking Phone. After reading this guide you will be able to fully master the use of your GS200 mobile phone and appreciate all its functions and ease of use. The GS200 GPS Tracking Phone is designed for use on the GSM networks. Not only does the GS200 provide you with basic calling functions, but also with many practical functions such as GPS Tracking Function, a name card style phonebook, personalized chord ring tones and pictures, clock, alarm, calculator, automatic power on/power off, to do list, calendar, world clock, unit/currency converter and bluetooth etc, to improve the time you spend working and playing. Moreover, the GS200 uses a personalized man-machine interface and the perfect functional design will satisfy all your needs. The GS200 GPS Tracking Phone is compatible with GSM technology and has been approved by certification authorities both domestically and abroad. Our company reserves the right to revise this manual

content without prior notice.

1.2 Safety Notice

If your mobile phone is lost or stolen, please contact the telecommunications authorities or a sales agent immediately to have a hold put on the SIM card. This will prevent economic loss caused by unauthorized calls made from your mobile phone.

When you contact the telecommunications authorities or a sales agent, they will need to know the IMEI number of your mobile phone (remove battery to expose number located on the label on back of phone). Please copy this number and keep in a safe place for future use.

In order to avoid the misuse of your mobile phone please take the following preventative measures:

- Set the PIN number of your mobile phone's SIM card and change this number immediately if it becomes known to a third party.

- Please keep the phone out of sight when leaving it in a vehicle. It is best to keep the phone on your person, or locked in the trunk.

- Set call restrictions.

1.3 For Your Safety Please read these safety guidelines before using your mobile phone to assure the safe and proper use of the phone.

1.3.1 General matters

Please turn off your mobile phone on airplanes, in hospitals and in other locations with restricted mobile phone use, otherwise the normal operation of electrical

equipment and medical instruments will be affected. Please obey local regulations when using your mobile phone.

While driving please obey local laws and regulations with regard to mobile phone use. When talking on the phone while driving, please obey the following rules: Concentrate on driving and be aware of traffic conditions; if your mobile phone has a hands-free function, please use it in this mode. Under poor driving conditions, please stop the car before you dial or pick up the phone.

Please obey laws, regulations and signs when near an area storing fuel, chemicals, or volatile materials.

Please keep mobile phones, batteries and chargers away from children, to prevent them from injuring themselves with them.

In order to prevent damage to your mobile phone, only accessories, such as batteries and chargers, may be used with your mobile phone. The use of other batteries or chargers could result in battery leakage, overheating, cracking, fire or other malfunctions.

Please do not use your mobile phone near low signal or precision electronic equipment. Radio wave interference may cause the malfunctioning of such electronic equipment and other problems. Special attention must be paid near the following equipment: hearing aids, pacemakers and other electronic medical equipment, smoke detectors, automatic doors and other automatic control installations. To find out the effect of mobile phones on a pacemaker or other piece of electronic medical equipment please contact the manufacturers or local sales agents of the equipment.

This mobile phone is equipped with an auto power on function. Please refer to the mobile phone's clock

setting to assure that the mobile phone will not automatically turn on during a plane flight.

To avoid the mobile phone malfunctioning, or catching fire, please do not violently impact, jolt or throw your mobile phone.

Please do not place the batteries, mobile phone or charger in a microwave oven or high-pressure equipment. Otherwise it could lead to unexpected accidents such as damage to the circuitry or fire.

Please do not use your mobile phone near flammable or volatile gases, otherwise it could cause malfunctioning or fire.

Please do not subject your mobile phone to high temperatures, high humidity or dusty places, otherwise this may lead to the malfunction of your mobile phone.

To avoid your mobile phone falling and malfunctioning or being damaged, please do not place your phone on uneven or unstable surfaces.

1.3.2 Phone Safety

Do not disassemble or modify the mobile phone, as it will lead to damage to the phone such as battery leakage or circuitry failure.

Please do not subject the LCD to impact or use the screen to strike things, as this will damage the LCD board and cause leakage of the liquid crystal. There is a risk of blindness if the liquid crystal substance gets into the eyes. If this occurs rinse eyes immediately with clear water (under no circumstances rub your eyes) and go immediately to a hospital for treatment.

Under very rare circumstances using the mobile phone in certain model cars may negatively effect the internal electronic equipment. In order to assure your safety under such circumstances please do not use the mobile

phone. If your car is equipped with an airbag, please do not place your phone on top of, or within the contact area of the airbag in order to avoid seriously harming the driver or passenger when the airbag inflates.

Please do not use needles, pen tips, or other sharp objects on the keypad as this may damage the mobile phone or cause it to malfunction.

Avoid letting the phone come into close contact with magnetic objects such as magnetic cards as the radiation waves of the mobile phone may erase the information stored on floppy disks, pay cards and credit cards.

Please keep small metal objects, such as thumbtacks, far away from the receiver. When the receiver is in use it becomes magnetic and may attract these small metal objects and thus these may cause injury or damage the mobile phone.

Avoid having the mobile phone come into contact with water or other liquids. If liquids enter the phone, this could cause a short circuit, battery leak or other malfunction.

As much as possible, please use the mobile phone in a place away from landline telephones, televisions, radios, and automated office equipment in order to avoid affecting both the equipment and the mobile phone.

1.3.3 Battery Safety

Do not disassemble or modify the battery, as this will cause the battery to leak, overheat, crack and catch fire.

Do not dispose of old batteries with everyday domestic garbage. Please dispose of old batteries at the directed places with specific rules for their disposal.

Please do not put/throw batteries into a fire, as this will

cause the battery to catch fire and explode.

When installing the battery, do not use force or pressure, as this will cause the battery to leak, overheat, crack and catch fire.

Please do not use wires, needles or other metal objects to short-circuit the battery. Also, do not put the battery near necklaces or other metal objects, as this will cause the battery to leak, overheat, crack and catch fire.

Please do not solder the contact points of the battery, as this will cause the battery to leak, overheat, crack and catch fire.

If the liquid in the batteries goes into the eyes, there is a risk of blindness. If this occurs do not rub the eyes, but immediately rinse eyes with clear water and go to the hospital for treatment.

Please do not use or place the batteries near high temperature places such as near a fire or heating vessel, as this will cause the battery to leak, overheat, crack and catch fire.

If the battery overheats, changes colour, or becomes distorted during use, charging, or storage, please stop using and replace it with a new battery.

If the liquid from the battery comes in contact with skin or clothing this could cause burning of the skin. Immediately use clear water to rinse and seek medical attention if necessary.

If the battery leaks or gives off a strange odour, please remove the battery from the vicinity of the open fire to avoid a fire or explosion.

Please do not let the battery become wet as this will cause the battery to overheat, smoke and corrode.

Please do not use or place batteries in places of high temperature such as in direct sunlight, as this will cause the battery to leak and overheat, lower performance,

and shorten the battery's life.

Please do not continuously charge for more than 24 hours.

Please place the battery in a cool, shady and well-ventilated place out of direct sunlight.

The life of all mobile phone batteries is limited. The usable time of batteries decreases with frequent charging. When charging becomes ineffective this means that the battery is at the end of its life and the battery should be replaced with a new one of the designated type.

1.3.4 Charger Safety

Please do not disassemble or modify the charger, as it will lead to bodily harm, electrical shock, fire or damage to the charger.

Please use AC 220 volts. The use of any other voltage will cause battery leakage, fire and cause damage to the mobile phone and charger. Max. allowed temp for using the device is +40°C

It is forbidden to short circuit the charger, as this will cause electrical shock, smoking and damage to the charger.

Please do not use the charger if the power cord is damaged, as this will cause fire or electrical shock.

Please immediately clean any dust gathered on the electrical outlet.

Please do not place vessels with water near the charger in order to avoid water splashing onto the charger and causing an electrical shortage, leakage or other malfunction.

If the charger comes in contact with water or other liquid the power must immediately be switched off to avoid an electrical short or shock, fire or malfunction

of the charger.

Please do not use the charger in the bathroom or other excessively moist areas, as this will cause electrical shock, fire or damage to the charger.

Please do not touch the charger with wet hands, as this will cause electrical shock.

Do not modify or place heavy objects on the power cord, as this will cause electrical shock or fire.

Before cleaning or carrying out maintenance please unplug the charger from the electrical outlet.

When unplugging charger, do not pull on the cord, but rather hold on to the body of the charger, as pulling on the cord will damage the cord and lead to electrical shock or fire.

Please do not charge in the following places: moist or humid places, dusty places or places with excessive vibration (this will cause malfunctioning); near televisions, radios, electronic products (this will effect the picture and sound)

1.3.5 Cleaning and Maintenance

The mobile phone, battery and charger are not water resistant. Please do not use them in the bathroom or other excessively moist areas and likewise avoid allowing them to get wet in the rain.

Use a soft, dry cloth to clean the mobile phone, battery and charger.

Please do not use alcohol, thinner, benzene or other solvents to wipe the mobile phone.

A dirty outlet will cause poor electrical contact, lose of power and even inability to recharge. Please clean regularly.

2 Before Use

2.1 The Names and Explanation of Each Part

2.1.1 Technical information

Phone

Model	GS200
Dimensions (w×h×t)	47×112×16.5mm
Weight	100g

Lithium Battery

Model	GS200
Rating voltage	3.7V
Max charge voltage	4.2V
Capacity rating	1150mAh

Travel charger

Model	SLGT/PS
Input	100V-240V~50/60Hz 0.2A
Output	5.0V, 0.55A

Earphone

spec	Mono Handsfree Headset

2.1.3 Keypad Instructions

1. **Navigation key: Left/right keys:** for moving the cursor when editing text; In most submenus, press the **left key** to return the upper menu, press the **right key** to open the file. **Up/down keys:** scroll to view names, phone numbers, SMS, MMS etc, moves the cursor up and down when editing text.

2. **Left soft key:** to perform the function of the prompt displayed in lower left corner of the screen.

3. **Right soft key:** to perform the function of the prompt displayed in lower right corner of the screen.

4. **Dial key:** to dial and pick up calls by master

SIM card; on standby, to see the all calls record list in SIM card.

5. **Hang-up key**: to end a call or reject incoming calls; under most circumstances pressing this key will put the mobile phone into standby mode.

6. *** key**: this key has different functions in different modes and menus.

7. **Number keys**: to enter numbers and letters with the number keys from 0-9; to rapidly select menu items, etc.

8. **# key**: this key has different functions in different modes and menus.

9. **OK key**: OK key function is same with the left soft key.

Attention: In this handbook, the phrase “press the key” refers to pressing and thereafter releasing a key; “Hold down a key” refers to pressing a key and keeping it depressed for 2 seconds or longer.

2.1.4 Icon

Icon	explain	Display place

2.2 Battery The battery is initially charged with 50% of its total capacity, you can unpack and use it. Please recharge the battery to full after it's exhausted for the first 3 times, so as to make the best of your battery.

2.2.1 Removal and Installation of the Battery

When removing the battery follow the following steps: Push the battery cover towards bottom;① Raise② the battery bottom, break out the battery from the mobile-phone.

Warning: You must turn off your mobile phone before removing the battery. Under no circumstances should you remove the battery when the mobile phone is on as this may damage the SIM card and your mobile phone.

When installing the battery follow the following steps:
According to arrowhead direction, push the battery ① to inset
mobile-phone. Cover with the battery cover.② ③ Push the
battery cover towards top.

2.2.2

Battery

charging

The charger connector with the bottom of the phone.

The charger connector with the electrical source.

The battery capacity indicator in Icon Area will then flash periodically; when charging at power-off status, charging indicator on the screen means the phone is charging now. If you are using a phone in low battery, it may need certain time for charging indicator to appear on the screen after starting to charge.

When the Capacity Indicator in Icon Area is full and doesn't flash any more, the charging process is complete. If your phone is charged in power off status, charging complete screen will also display. Charging process usually takes 1-2.5 hours. Battery, phone and charger normally turns hot during charging process.

When charging process complete, disconnect connections between AC power outlet, your phone and the charger.

Attention:

Be sure to charge in ventilated place with the temperature ranging from -10°C to $+40^{\circ}\text{C}$, and always use the charger provided by original manufacturer. Using unauthorized charger may cause danger, and also violates warranty coverage of the manufacturer.

Charge your battery in time when the phone automatically powers off or displays low battery warning. The phone will automatically decrease charging time when the battery is not exhausted before charging.

2.3 Earphone Please open the plug of the earphone jack and then insert the earphone into earphone jack as the following picture before you use it.

2.4 Connecting to the network

2.4.1 SIM card Before using your phone, please insert valid SIM (Subscriber Identity Module) card into the phone. SIM card is provided by network service provider. All information related to network connection is recorded in the chip of the SIM card. Names, phone numbers and SMS are also recorded in the card. You can take the SIM card out from your phone and put it into any other GSM phone, which will automatically read the SIM card. To avoid losing or damaging the information stored in the SIM card, don't touch metal contact surface, and always keep your SIM card away from power and magnetic material. Once the SIM card is damaged, you will not be able to use the phone any more.

Warning: Be sure to turn off the phone before taking out the SIM card. It's strictly prohibited to insert or take out the SIM

card when the phone is connected to the power source, otherwise the SIM card or the phone could be damaged.

2.4.2 Insertion of the SIM Card Metal interface of SIM card is very easy scrape. Before inserting into the phone you must carefully remove it.

Turn off the phone; remove the battery and unplug other external power sources.

Insert the SIM card into the SIM slot as shown in the following picture.

When you need to remove the SIM card, please first turn off the phone, remove the battery, then remove the SIM card.

2.4.3 Turning the Phone On and Off To turn on or off the phone please hold down **the Hang-up key**. If you turn on the phone without having inserted the SIM card, phone will display “**Insert SIM**”. After inserting the SIM card the phone will automatically check if the SIM is useable. The following will be displayed in this order: **Enter Phone Lock Code** —If you set the Phone Lock. **Enter PIN** —If you set the SIM Lock. **Greeting Text** —If you turn on greeting status and edit greeting text. **Searching** —The phone will conduct a search to find the appropriate network connections.

2.4.4 Unlocking the Phone Lock In order to protect against unlawful usage, a lock code may be set for your phone. If you choose this option, then every time you turn on your phone, you must enter the lock code

before you may use the mobile phone as normal. The user may turn off the phone lock code protection. Under such circumstances you cannot prevent the unlawful use of your mobile phone.

Hold down **the Hang-up key** to turn on the mobile phone;
Enter the lock code. Use the **Right soft key** to delete mistakes. Finish by pressing the **left soft key** or “#” **key**.

For example, if your lock code is set as 0000, then enter the following:

0 0 0 0 OK If you forget your lock code, you must contact your retailer or local authorized repair and maintenance service centre to have the lock code opened.

2.4.5 Unlocking the SIM card

In order to protect against unlawful usage, the SIM card uses a PIN (personal identification number) number. If you choose this option, then every time you turn on your phone you must enter the PIN so as to unlock the SIM card before you use the mobile phone. The user may turn off the SIM card protection. Under such circumstances you cannot prevent the unlawful use of the SIM card.

Hold down **the Hang-up key** to turn on the mobile phone;

Enter the PIN number. Use the **right soft key** to delete mistakes. Finish by pressing the **left soft key** or “#” **key**.

For example, if PIN is set as 1234, then enter the following: **1 2 3 4**

OK If an incorrect number is entered three times consecutively, your SIM card will be locked by the network and the mobile phone will ask for the PUK number.

Attention: Your network provider will offer your SIM card

with a standard PIN number (with 4-8 numbers). You should change this to your own number as soon as possible.

2.4.6 Connecting to the Network

When the SIM card has been successfully opened your mobile phone will automatically search for a useable network (“**Searching**” will be displayed on the screen). When the connection is made, the name of the network provider will appear in the middle of the screen. Your phone supports GPRS (General Packet Radio Service) service. If your network operator has activated your GPRS service and your phone is within the GPRS network area, at this time you may access the WAP service through the GPRS network.

Attention: If “Emergency” is displayed on the screen, this means that you are already outside the normal coverage of the network area, but you can still transmit emergency calls depending on the strength of your signal.

3 Fleetly User manual

3.1 Characteristic Function Positioning itself as a multimedia phone, GS200 not only provides all basic features of mobile phone, but also supports versatile and practical features as follows:

GPS: your mobile phone supports GPS tracking Function.

Bluetooth: Bluetooth is a global standard for wireless connectivity.

Phone Book: speed search matched phone number records; each phone book record stored in the phone corresponds to up to 4 numbers with a total 500 phone book records capacity of the phone, and the phone book

record stored in SIM card depends on the capacity of the card; send SMS in phone book and copy one record into SIM card or phone; copy and paste phone book record between SIM card and phone; delete phone book record in SIM card and phone; support card-clipper phone book, personalized ringtone, picture and so on.

Call History: your phone automatically stores all related calling record for your reference; delete one single calling record as well as speed delete all calling records, and so on.

SMS: view capacity and used space for SIM card SMS; extract phone number from SMS, and so on.

User Profiles: to set your mobile phone's ring tone, according to different event or environments.

Settings: to set the individual characteristic by demand, include the phone setup, call setup, network setup and security setup; can set the different function according as the different fancy, eg: time and date, schedule power on/off and call barring, and so on.

Preferred Input Methods: to offer 34 kinds of input methods in the mobile-phone.

Display Characteristic: to set the individual characteristic wallpaper by demand, and so on.

Organizer: You may use various practical functions including calendar, alarm, world clock, calculator, unit converter, currency converter, health.

3.2 Dialling You may dial and receive calls on your phone when the symbol of your network provider appears on the screen. The information bar on the upper left corner of the screen indicates network strength (the signal is strongest when there are four

lines visible).

Barriers greatly affect call quality, thus slightly moving your location can increase the quality of the phone call.

3.2.1 Making Domestic Calls

Use the **number keys** to enter the telephone number, and then press the **dial key** to dial the call. If you need to change the phone number, press the **right soft key** to delete a character to the left of the cursor. The dialing animation will appear on the screen during dialing. When the other party picks up the phone, the screen will display information about the call.

You can input domestic calls in this order:

Area code phone number dial key

3.2.2 Calling Fixed Line Extensions

Some fixed phone extensions cannot be called directly. You must first go through the switchboard before you can dial the extension, then hode down the *** key** to switch, as far as, the screen will display the letter “**P**”, then dial the extension number.

You can input the switchboard number and the extension number in this order:

**Area code switchboard number P extension
number dial key**

You must first go through the switchboard before you can dial the extension, then hode down the *** key** to switch, as far as, the screen will display the letter “**W**”, then dial the extension number.

You can input the switchboard number and the extension number in this order:

Area code **switchboard number** **W** **extension**
number **dial key**

3.2.3 Making International calls For making international calls you should hold down the * **key** to switch, until the international phone prefix “+” appears on the screen. This will allow you to make an international call in any country regardless of what the international call prefix is (e.g., 86 in China). After entering the prefix, enter the country code and full number you wish to call. The country code is according to convention: Germany is 49, England 44, Sweden 46 and so on.

When making international calls, you should omit the initial 0 of area codes

For example, if you were to dial the Shanghai service hotline, you would dial +86 21 114

You can input international calls in this order:

+ Country code **area code** **telephone number** **dial key**

3.3 Emergency Calls

If you are located within the network area (you can find this out by referring to the network strength indicator located on the upper left-hand corner of your mobile phone screen), you should be able to make emergency calls. If your network provider does not provide roaming where you are, “**Emergency**” will appear on

the screen. If you are located within a network area, even if you do not have a SIM card, you will be able to transmit emergency calls.

3.4 Receiving Calls

If you have set the “**Any Key**”, you can pick up the call by pressing any key other than the **hang up key** and **right soft key**.

3.5 Ending a Call You can press the **hang up key** or **right soft key** to refuse an incoming call. During a call you can press the **hang up key** to end a call. You can also cancel a call you have just dialed by pressing the **hang up key**.

3.6 Call Option During the call, press the **left soft key “Option”** to enter the call option menu, or press the **right soft key “H-Free”** to activate and enlarge tone, then you can press the **right soft key “H-Held”** to close and decrease volume.

The call option menu can only be seen while a call is being made. Functions such as call waiting, call divert, and conference calls require network support. Please contact your network provider. In this menu, you can handle as follows:

Hold

To put a call on pause or retrieve a call that has been put on hold.

End

To end the call.

New Call

To begin to dial new call.

Phone Book

To enter the list of phone book entries.

Message

To enter the SMS menu.

Mute

To stop transmitting the user's voice.

DTMF

To deactivate or activate DTMF sound.

4 Function Menu

4.1 How to Use the Function Menu

4.1.1 Scroll to select Function

On standby, press the **left soft key** “**Menu**” to enter the main function menu. During a call press the **left soft key** “**Option**” to enter the call option menu, then use the **up/down keys** to scroll to the desired item on the call menu and press the **left soft key** to select the function.

In all the menus and submenus, use the **Navigation key** to scroll to the desired function and press the **left soft key** to enter the function item.

4.1.2 Speedily to select function Most main menus and submenus have speed numbers. This speed number is the function's corresponding index number.

On standby, press the **left soft key** “**Menu**” to enter the main menu, **left/right keys** to scroll to the desired item on the menu.

Enter the main menu's speed number to enter the corresponding option. Enter the submenu's speed number to select the corresponding option.

4.1.3 Exit a Menu Usually, when in the function menu, you can exit a menu item by pressing the **right soft key**. You

can also press the **hang-up key** to return to the standby mode.

4.2 Structure of the Function Menu

The function menu has the following default structure: 1 Call History 1-1 Missed Calls 1-2 Dialed Calls 1-3 Received Calls 1-4 Delete Call Log 1-4-1 Miss Calls 1-4-2 Dial Calls 1-4-3 Received Calls 1-4-4 Delete All 1-5 Call Time 1-5-1 Last Call Time 1-5-2 Total Sent 1-5-3 Total Received 1-5-4 Reset All Time 1-6 Call Cost 1-6-1 Last Call Cost 1-6-2 Total Cost 1-6-3 Reset Cost 1-6-4 Max Cost 1-6-5 Price Per Unit 1-7 SMS Counter 1-7-1 Sent 1-7-2 Received 1-8 Auto Quick End 2 Calendar 3 Services 3-1 STK* 4 Phone Book 4-1 Quick Search 4-2 Search Entry 4-3 Add New Entry

4.7 Messages In the main menu interface you can scroll to select “**Messages**” then press the **left soft key** to enter the “**Messages**” main menu.

4.7.1 SMS

If your network supports SMS (short message service) and you have applied for this service from your network provider, you can send English, French, Spanish, Thai, Arabic, Russian, Indonesian short messages through the short message service centre. The mobile-phone supports the short information (EMS) of the enhanced mode, can insert picture, animation, melody, sound, etc. In short information can use the template to produce short information. Enter SMS submenu, you can select menu as follows: **Inbox, Outbox, Write Message, Template, Message Settings.**

4.7.1.1 Inbox Enter the “**Inbox**” submenu to view received messages. When you receive a short message, your mobile phone will vibrate (if **Alert Type** set to the **Vibration**) and ring (if **Alert Type** set to the **Ring**), display the prompt information. If you do not wish to read it immediately, after you exit this interface, the envelope icon appears at the top of the screen on standby and the short message will automatically be saved on the SIM card. The amount of short messages that can be saved (this includes received messages as well as saved messages) is based on the memory size of the SIM card.

When viewing the short message list in “**Inbox**”, the sender’s phone number or name (if the name has already been saved in the phonebook) will be displayed, and show that receives the date of short messages by floating item.

When looking at the short message list, you can use the **up/down keys** to select the short message. When the “**Inbox**” short message list appears, you can press the **left soft key “Ok”** to read the detailed contents of a message, the date and time of receipt and the name (if the name has already been saved in the phonebook) or telephone number of the sender. At this time you can also press the **left soft key “Option”** to perform the following operations: **Reply** to send a short message to the sender of the current message. **Delete** to delete the current short message. **Edit** to edit the current message.

Forward to select to **Send Only** it to one person, **Send To Many**, or **Send By Group**. **Copy to Phone** to copy the current message saved in the SIM to phone. **Move to Phone** to move the current message saved in the SIM to phone. **Chat** you can chat with others in the separate chat room by SMS **Delete All** to delete all of the messages in the “**Inbox**”. **Copy All** to copy all of the messages in the “**Inbox**” to another carrier. **Move All** to move all of the messages in the “**Inbox**” to another carrier

Use Number to extract the telephone number of the sender in the current short message and contain the number(3—40 bit) in the current short message, then display them by list form. If you select one of the numbers, you can save the number to your phonebook, or dial.

4.7.1.2 Outbox Enter the “**Outbox**” submenu to view the short messages (saved in the SIM card and owner phone) in the mobile phone. After the “**Outbox**” short message list appears, you can use the **up/down keys** to select the short message; press the **left soft key “Ok”** to read the detailed contents of the selected short messages. At this time you may also press the **left soft key “Option”** to perform the following functions:

Send to send the current message.

Edit to edit the current message.

Delete to delete the current short message.

Copy to Phone to copy the current message saved in the SIM to phone.

Move to Phone to move the current message saved in the SIM to phone.

Delete All to delete all of the messages in the “**Outbox**”.

Copy All to copy all of the messages in the “**Outbox**” to another carrier.

Move All to move all of the messages in the “**Outbox**” to another carrier

Use Number to extract the telephone number of the receiver in the current short message and contain the number(3—40 bit) in the current short message, then display them by list form. If you select one of the numbers, you can save the number to your phonebook, or dial.

4.7.1.3 Write Message Before writing a short message, please confirm that you have set the short message service centre number. You can edit your short message by entering the “**Write Message**” submenu. Press the **left soft key** to enter the “**Option**” menu:

Done After finishing your message you can select this

option and use the **up/down keys** to select “**Send Only**”, “**Save and Send**”, “**Save**”, “**Send To Many**” or “**Send By Group**”.

4.10 Bluetooth Bluetooth is a global standard for wireless

connectivity. Bluetooth is based on a lowcost, short-range radio. Bluetooth technology facilitates the replacement of the cables normally used to connect one device to another, with one universal short-range radio link. Two Bluetooth devices can talk to each other when they come within a range of 10 meters to each other. Due to their dependence on a radio link, as opposed to alternate technology such as an infrared connection, Bluetooth devices do not require a line-of-sight connection in order to communicate. Bluetooth can interfere, come in for wall or other electron device and so on. Making Bluetooth device, battery capability will waste quickly. For insuring, phone and bluetooth can connect, please refer with equipment manufacturer before buy.

In some place, bluetooth can limit, before making, please refer the local charge department or service operator.

Power to press the **left soft key** to turn on or off the bluetooth function.

Inquiry Audio Device to press the **left soft key** to inquiry audio device. If device is found, press the **left soft key “Bond”**, then input password, finish coupling.

My Device to press the **left soft key “OK”** to display my device which device have connected. Then press the **left soft key “Option”** to handle as follows:

Connect to select one device to connect it.

Rename to amend the device show name.

Delete to delete this note.

Delete All to delete all notes.

Service List to display the service list of this device.

Inquiry New Device to find new device.

Active Device to display active device, press the **left soft key** “**Disc.**” to cut link.

Setting to display function setting as follows:

Visibility to press the **left soft key** to activate or deactivate the visibility of your mobile phone.

Change Device Name to amend the device name.

Authentication to set the device link whether need authentication.

Audio Path to select **Leave in phone** or **Forward to BT Headset**.

Remote SIM Mode to set **On/Off** to the **Remote SIM Mode**

About to show service list about this phone. Note: Link mode of device can differ, please read the device user explain before making.

4.11 Organizer In the main menu interface, press the **navigation key** to select “**Organizer**” and press the **left soft key** to enter the “**Organizer**” main menu.

4.11.1 Alarm The mobile-phone can set five alarms at most, and hold out the alarm when the phone is power off. Select one alarm, can set to turn **on/off**, **time**, **Repeat**, **Snooze(Mins)** and **Alert Type**.

Enter the “**Calculator**” submenu to display the operation interface of the calculator: - Use the **Number keys** from **0** to **9** to enter the numbers you wish to enter, use the **# key** to enter the decimal point.

- Press the **up/down keys** and **left/right keys** once to enter the symbols for the four mathematical operators +, -, x or ÷; press twice

to enter the symbols for M+,M-,MC,MR. - By pressing the **right soft key “Clear”** you can delete the latest entry or result, press the **right soft key, “Back”**, to exit the calculator, press **the left soft key “OK”** or touch “=” to calculate the result. **Note: The precision of this calculator is limited so that rounding errors may occur, especially in the case of indivisibility.**

4.11.4 World Clock

Enter **World Clock** submenu, display world time zone map, move coordinate location by the **left/right keys**, the interface will show the city time located by the coordinate.

4.11.5 Stopwatch Enter **Stopwatch** submenu, you can select **Typical Stopwatch** or **nWay Stopwatch**.

4.11.6 Unit Converter **Unit Converter** is an application that helps the user to convert English units into metric units and vice versa.

Weight Press the **up/down keys** to select the operational item. Press the **left/right keys** to select the conversion from **Kg<->Pound** and **Kg<->Ounce**. You input number in the frame, press the **left soft key “OK”**, conversion result will display in the other frame.

Length Press the **up/down keys** to select the operational item. Press the **left/right keys** to select the conversion from **Km<->Mile**, **M<->Yard**, **M<->Foot** and **Cm<->Inch**. You input number in the frame, press the **left soft key “OK”**, conversion result will display in the other frame. **Note: In the units converter, input eight numbers at most, conversion result can display fourteen numbers at most.(include radix point).**

4.11.7 Currency Converter First input **Rate**, press the **left soft key “OK”** to enter. Press the **up/down keys** to

select the operational item, press the **left/right keys** to select the rate of local and foreign. You input number in the frame, press the **left soft key “OK”**, conversion result will display in the other frame.

- 4.11.8 Health** Under Health menu, you may see the **BMI** item: to select your sex and input your stature, avoirdupois. BMI Result will be displayed.

5 Input Methods

- 5.1 General Outline** This mobile phone provides many input methods. Character entry functions permitted by this mobile phone are: - Inputting and editing of short messages - Inputting and editing of names in the phone book - Looking up the phone entry by name - Editing of text in MMS

--

- 5.2 Screen Key values** The keyboard values are as follows: Generally the **Left soft key** indicates confirmation; the **Right soft key** is to return or eliminate. **Navigation keys (up/down and left/right keys)**: Generally used to move the cursor or candidate characters for inputting. **OK key**: Generally indicates OK. **# key**: to switch between different input methods. *** key**: to display symbol input interface. **Number keys** from **2** to **9**: in the Intelligent language input modes, indicate the letters on the corresponding key. **Number key 0**: to indicate space in the foreign language input modes.

6 Trouble shooting

If anything unusual occurs while using your mobile phone, please

refer to the following table.

Frequently Occurring Problems	Cause	How to Fix	
Poor reception	Using the mobile phone in an area with poor reception such as near tall buildings or in a basement where radio waves cannot be transmitted.	Try to avoid.	
		Using the mobile phone when the network is busy, such as during rush hour, when the lines are full making it impossible to get through.	Try to avoid.

		Related to the distance from the base station built by the network.	You can request that the network service provider provide a service area plan.
Echo or noise	Caused by poor network relay, a regional problem.	Hang up and redial, if the relay is changed then the line may be better.	
	Some calling regions have poor lines.		
is Shortening of the standby time	Standby time related to the network system.	Please temporarily turn off your mobile phone, as you are located in an area with poor reception.	
		Batteries need to be replaced	Replace the batteries

		When you cannot get a signal, the phone will continue to transmit in order to find a base station, thereby expending large amounts of electricity will cause the standby time to decrease.	Please move to an area with a strong signal or temporarily turn off your mobile phone.
Unable to turn on the phone	The battery is empty.	Look at the remaining electricity or recharge.	
SIM card malfunction	SIM card is damaged.	Contact your network service provider.	
		SIM card is not properly inserted.	Confirm SIM card is properly inserted.

		There is a foreign substance on the metal surface of the SIM card.	Use a clean cloth to wipe off the metal contact point of the SIM card.
Unable to connect with the network	Expired SIM card	Contact your network provider.	
		Outside the GSM service area	Consult your network provider on the service area.
		Poor signal.	Please move to a place with a better signal and try again.
Unable to make a call	Using the call bar function	Cancel the call bar function.	
		Using the fixed dialling function.	Cancel the fixed call setting.
Incorrect PIN number	Consecutively enter the wrong password three times.	Contact your network provider.	

Unable to charge	Battery or charger is damaged.	Replace the battery or charger.	
		recharging in the environment of less than -10 or higher °C than 40°C	Change the charging environment.
		Poor contact	Check if the plug is properly connected
Unable to add new phone book entries	The storage space of the phone book is full	Delete a portion of the phone number entries	
Unable to set certain functions	Your network provider does not support this function or you have not applied for it.	Contact your network provider.	

FCC Section 15.105 (b)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Section 15.21 Information to the user

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Section 15.19 Labelling requirements

This device complies with Part 15 of the FCC Rules.
Operation is subject to the following two conditions:

- 1.This device may not cause harmful interference, and
- 2.This device must accept any interference received, including interference that may cause undesired operation.

The different operating modes (data-mode, acquisition-mode) of a Bluetooth device don't influence the output power and the channel spacing. There is only one transmitter, which is driven by identical input parameters concerning these two parameters. Only a different hopping sequence will be used. For this reason, the RF parameters in one op-mode are sufficient.

SAR INFORMATION

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue.

Device types GS200(FCC ID: **XMR-16182010001**) has also been tested against this SAR limit.

The highest SAR value reported under this standard during product certification for use at the ear is 0.526 W/kg and when properly worn on the body is 0.985

W/kg. This device was tested for typical body-worn operations with the back of the handset kept 1.5cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5cm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.
