About the Document

Revision History

Revision	Date	Author	Description
1.0	2016-06-07	Mountain ZHOU/ Frank WANG	<p>Initial</p> <ul style="list-style-type: none"> 1. Deleted description of EC25-AUT Mini PCIe in Table 1. 2. Added description of EC25-AU and EC25-J Mini PCIe in Table 1. 3. Updated key features of EC25 Mini PCIe in Table 2. 4. Added current consumption in Chapter 4.7. 5. Updated conducted RF receiving sensitivity of EC25-A Mini PCIe in Table 17. 6. Added conducted RF receiving sensitivity of EC25-J Mini PCIe in Table 18.
1.1	2017-01-24	Lyndon LIU/ Frank WANG	<ul style="list-style-type: none"> 1. Added new variants EC25-AF Mini PCIe, EC25-EU Mini PCIe, EC25-EC Mini PCIe, EC25-EUX Mini PCIe, EC25-MX Mini PCIe and their related information. 2. Updated LTE, UMTS and GSM features, and added storage temperature range in Table 2. 3. Added pin definition and description of pin 3, 5, 44 in Figure 2 and Table 4. 4. Modified the reference circuit of USB interface in Figure 6. 5. Updated the mechanical dimension of EC25 Mini PCIe in Figure 18. 6. Added USIM_PRESENCE in (U)SIM interface and updated the reference circuit in Chapter 3.4. 7. Added COEX UART interface (under
2.0	2019-04-30	Nathan LIU/ Frank WANG/ Ward WANG/ Ethan SHAN	

development) as UART interface in Chapter 3.6.

8. Modified description of W_DISABLE# signal in Chapter 3.8.3.
9. Modified description of LED_WWAN# signal in Chapter 3.8.5.
10. Updated description of antenna connection in Chapter 5.
11. Added thermal consideration in Chapter 6.7.
12. Added operating frequencies in Table 16.
13. Added GNSS frequency in Table 17.
14. Updated antenna requirements in Table 18.
15. Updated EC25 Mini PCIe conducted RF output power in Table 21.
16. Updated conducted RF receiving sensitivity of EC25-A Mini PCIe in Table 22.
17. Added conducted RF receiving sensitivity of EC25-AU Mini PCIe in Table 23.
18. Updated conducted RF receiving sensitivity of EC25-J Mini PCIe in Table 24.
19. Updated conducted RF receiving sensitivity of EC25-E Mini PCIe in Table 25.
20. Updated conducted RF receiving sensitivity of EC25-V Mini PCIe in Table 26.
21. Added conducted RF receiving sensitivity of EC25-AF Mini PCIe in Table 27.
22. Added conducted RF receiving sensitivity of EC25-EU Mini PCIe in Table 28.
23. Added conducted RF receiving sensitivity of EC25-EC Mini PCIe in Table 29.
24. Added conducted RF receiving sensitivity of EC25-EUX Mini PCIe in Table 30.
25. Added current consumption of EC25-AU Mini PCIe in Table 33.
26. Added current consumption of EC25-J Mini PCIe in Table 34.
27. Added current consumption of EC25-AF Mini PCIe in Table 37.
28. Added current consumption of EC25-EC Mini PCIe in Table 38.
29. Added current consumption of EC25-EUX Mini PCIe in Table 39.

2.1	2019-07-05	Fanny CHEN/ Ethan SHAN	1. Added EC25-AFX/-AUX Mini PCIe and related information.
-----	------------	---------------------------	---

			<ul style="list-style-type: none"> 2. Updated supported protocols and USB serial drivers in Table 2. 3. Added EC25-AFX Mini PCIe conducted RF receiving sensitivity in Table 28. 4. Updated conducted RF receiving sensitivity of EC25-EU Mini PCIe in Table 29. 5. Updated EC25-AF Mini PCIe current consumption in Table 39. 6. Added EC25-AFX Mini PCIe current consumption in Table 42. 7. Added EC25-MX Mini PCIe conducted RF receiving sensitivity in Table 32. 8. Added EC25-MX Mini PCIe current consumption in Table 43.
2.2	2019-08-19	Ward WANG/ Owen WEI	<ul style="list-style-type: none"> 1. Deleted the information of GNSS supported on EC25-EC Mini PCIe in Table 1. 2. Updated conducted RF receiving sensitivity of EC25-AU Mini PCIe in Table 24. 3. Updated conducted RF receiving sensitivity of EC25-EU Mini PCIe in Table 30. 4. Added conducted RF receiving sensitivity of EC25-AUX Mini PCIe in Table 34. 5. Updated current consumption of EC25-J Mini PCIe in Table 38. 6. Added current consumption of EC25-AUX Mini PCIe in Table 45. 7. Added current consumption of EC25-EU Mini PCIe in Table 46. 8. Deleted current consumption of EC21-EC Mini PCIe, and the data will be updated in the future version.
2.3	2019-11-26	Fanny CHEN	<ul style="list-style-type: none"> 1. Removed the related information of ThreadX OS because the baseline has been updated. 2. Updated the supported protocols and USB serial drivers in Table 2. 3. Added operating modes of module in Chapter 3.3. 4. Updated description of W_DISABLE# in Chapter 3.10.3. 5. Updated the notes for GNSS performance in Chapter 4.2. 6. Updated the Mini PCI Express connector type in Figure 21.

2.4

2019-12-18

Ward WANG
Barret Xiong
Cody Zhou

1. Modified the I/O parameters definition of the I2C interface as OD in Table 4 and 11.
 2. Modified the current consumption of EC25-EUX Mini PCIe in Table 43.
 3. Deleted related information of EC25-EC Mini PCIe
 4. Added related information of EC25-T Mini PCIe
 5. Added related information of EC25-EX Mini PCIe

1 Introduction

This document defines EC25 Mini PCIe module, and describes its air interfaces and hardware interfaces which are connected with customers' applications.

This document helps customers quickly understand module interface specifications, electrical characteristics, mechanical specifications and other related information of the module. To facilitate application designs, it also includes some reference designs for customers' reference. The document, coupled with application notes and user guides, makes it easy to design and set up wireless applications with EC25 Mini PCIe.

1.1. FCC Certification Requirements.

According to the definition of mobile and fixed device is described in Part 2.1091(b), this device is a mobile device.

And the following conditions must be met:

1. This Modular Approval is limited to OEM installation for mobile and fixed applications only. The antenna installation and operating configurations of this transmitter, including any applicable source-based time-averaging duty factor, antenna gain and cable loss must satisfy MPE categorical Exclusion Requirements of 2.1091.

2. The EUT is a mobile device; maintain at least a 20 cm separation between the EUT and the user's body and must not transmit simultaneously with any other antenna or transmitter.

3. A label with the following statements must be attached to the host end product: This device contains
FCC ID: XMR202012EC25T

4. To comply with FCC regulations limiting both maximum RF output power and human exposure to RF radiation, maximum antenna gain (including cable loss) must not exceed:

- LTE Band2: \leq 11.000dBi
- LTE Band 4 / LTE Band 66: \leq 5.000dBi
- LTE Band 5: \leq 9.541dBi
- LTE Band 12: \leq 8.734dBi
- LTE Band 71: \leq 8.545dBi

5. This module must not transmit simultaneously with any other antenna or transmitter

6. The host end product must include a user manual that clearly defines operating requirements and conditions that must be observed to ensure compliance with current FCC RF exposure guidelines.

For portable devices, in addition to the conditions 3 through 6 described above, a separate approval is required to satisfy the SAR requirements of FCC Part 2.1093

If the device is used for other equipment that separate approval is required for all other operating configurations, including portable configurations with respect to 2.1093 and different antenna configurations.

For this device, OEM integrators must be provided with labeling instructions of finished products.

Please refer to KDB784748 D01 v07, section 8. Page 6/7 last two paragraphs:

A certified modular has the option to use a permanently affixed label, or an electronic label. For a permanently affixed label, the module must be labeled with an FCC ID - Section 2.926 (see 2.2 Certification (labeling requirements) above). The OEM manual must provide clear instructions explaining to the OEM the labeling requirements, options and OEM user manual instructions that are required (see next paragraph).

For a host using a certified modular with a standard fixed label, if (1) the module's FCC ID is not visible when installed in the host, or (2) if the host is marketed so that end users do not have straightforward commonly used methods for access to remove the module so that the FCC ID of the module is visible; then an additional permanent label referring to the enclosed module: "Contains Transmitter Module FCC ID: XMR202012EC25T" or "Contains FCC ID: XMR202012EC25T" must be used. The host OEM user

manual must also contain clear instructions on how end users can find and/or access the module and the FCC ID.

The final host / module combination may also need to be evaluated against the FCC Part 15B criteria for unintentional radiators in order to be properly authorized for operation as a Part 15 digital device.

The user's manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. In cases where the manual is provided only in a form other than paper, such as on a computer disk or over the Internet, the information required by this section may be included in the manual in that alternative form, provided the user can reasonably be expected to have the capability to access information in that form.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment.

1.2. Safety Information

The following safety precautions must be observed during all phases of operation, such as usage, service or repair of any cellular terminal or mobile incorporating EC25 Mini PCIe module. Manufacturers of the cellular terminal should send the following safety information to users and operating personnel, and incorporate these guidelines into all manuals supplied with the product. If not so, Quectel assumes no liability for customers' failure to comply with these precautions.

Full attention must be given to driving at all times in order to reduce the risk of an accident. Using a mobile while driving (even with a handsfree kit) causes distraction and can lead to an accident. Please comply with laws and regulations restricting the use of wireless devices while driving.

Switch off the cellular terminal or mobile before boarding an aircraft. The operation of wireless appliances in an aircraft is forbidden to prevent interference with communication systems. If the device offers an Airplane Mode, then it should be enabled prior to boarding an aircraft. Please consult the airline staff for more restrictions on the use of wireless devices on boarding the aircraft.

Wireless devices may cause interference on sensitive medical equipment, so please be aware of the restrictions on the use of wireless devices when in hospitals, clinics or other healthcare facilities.

Cellular terminals or mobiles operating over radio signals and cellular network cannot be guaranteed to connect in all possible conditions (for example, with unpaid bills or with an invalid (U)SIM card). When emergent help is needed in such conditions, please remember using emergency call. In order to make or receive a call, the cellular terminal or mobile must be switched on in a service area with adequate cellular signal strength.

The cellular terminal or mobile contains a transmitter and receiver. When it is ON, it receives and transmits radio frequency signals. RF interference can occur if it is used close to TV set, radio, computer or other electric equipment.

In locations with potentially explosive atmospheres, obey all posted signs to turn off wireless devices such as your phone or other cellular terminals. Areas with potentially explosive atmospheres include fuelling areas, below decks on boats, fuel or chemical transfer or storage facilities, areas where the air contains chemicals or particles such as grain, dust or metal powders, etc.

2 Product Concept

2.1. General Description

EC25 Mini PCIe module provides data connectivity on LTE-FDD, LTE-TDD, DC-HSDPA, HSPA+, HSDPA, HSUPA, WCDMA, EDGE and GPRS networks with PCI Express Mini Card 1.2 standard interface. It supports embedded operating systems such as Linux, Android, etc., and also provides audio, high-speed data transmission and GNSS functionalities for customers' applications.

EC25 Mini PCIe module can be applied in the following fields:

- PDA and Laptop Computer
- Remote Monitor System
- Vehicle System
- Wireless POS System
- Intelligent Meter Reading System
- Wireless Router and Switch
- Other Wireless Terminal Devices

This chapter generally introduces the following aspects of EC25 Mini PCIe module:

- Product Series
- Key Features
- Functional Diagram

NOTE

EC25 Mini PCIe contains **Telematics** version and **Data-only** version. **Telematics** version supports voice and data functions, while **Data-only** version only supports data function.

2.2. Description of Module Series

EC25 Mini PCIe series contains 12 variants, and are listed in the following table.

Table 1: Description of EC25 Mini PCIe

Module Series	Description
EC25-A Mini PCIe	Support LTE-FDD: B2/B4/B12 Support WCDMA: B2/B4/B5 Support LTE/WCDMA receive diversity Support GNSS ¹⁾ Support digital audio ²⁾
EC25-AU Mini PCIe ³⁾	Support LTE-FDD: B1/B2/B3/B4/B5/B7/B8/B28 Support LTE-TDD: B40 Support WCDMA: B1/B2/B5/B8 Support GSM: 850/900/1800/1900MHz Support LTE/WCDMA receive diversity ³⁾ Support GNSS ¹⁾ Support digital audio ²⁾
EC25-J Mini PCIe	Support LTE-FDD: B1/B3/B8/B18/B19/B26 Support LTE-TDD: B41 Support WCDMA: B1/B6/B8/B19 Support LTE/WCDMA receive diversity Support GNSS ¹⁾ Support digital audio ²⁾
EC25-E Mini PCIe	Support LTE-FDD: B1/B3/B5/B7/B8/B20 Support LTE-TDD: B38/B40/B41 Support WCDMA: B1/B5/B8 Support GSM: 900/1800MHz Support LTE/WCDMA receive diversity Support GNSS ¹⁾ Support digital audio ²⁾
EC25-V Mini PCIe	Support LTE-FDD: B4/B13 Support LTE receive diversity Support GNSS ¹⁾ Support digital audio ²⁾
EC25-AF Mini PCIe	Support LTE-FDD: B2/B4/B5/B12/B13/B14/B66/B71 Support WCDMA: B2/B4/B5 Support LTE/WCDMA receive diversity Support GNSS ¹⁾ Support digital audio ²⁾

	Support LTE-FDD: B1/B3/B7/B8/B20/B28A Support LTE-TDD: B38/B40/B41 Support WCDMA: B1/B8 Support GSM: 900/1800MHz Support LTE/WCDMA receive diversity Support GNSS ¹⁾ Support digital audio ²⁾
EC25-EU Mini PCIe	Support LTE-FDD: B1/B3/B7/B8/B20/B28A Support LTE-TDD: B38/B40/B41 Support WCDMA: B1/B8 Support GSM: 900/1800MHz Support LTE/WCDMA receive diversity Support GNSS ¹⁾ Support digital audio ²⁾
EC25-EUX Mini PCIe	Support LTE-FDD: B1/B3/B7/B8/B20/B28A Support LTE-TDD: B38/B40/B41 Support WCDMA: B1/B8 Support GSM: 900/1800MHz Support LTE/WCDMA receive diversity Support GNSS ¹⁾ Support digital audio ²⁾
EC25-MX Mini PCIe	Support LTE-FDD: B2/B4/B5/B7/B28/B66 Support WCDMA: B2/B4/B5 Support LTE/WCDMA receive diversity Support digital audio ²⁾
EC25-AFX Mini PCIe	Support LTE-FDD: B2/B4/B5/B12/B13/B14/B66/B71 Support WCDMA: B2/B4/B5 Support LTE/WCDMA receive diversity Support GNSS ¹⁾ Support digital audio ²⁾
EC25-AUX Mini PCIe ³⁾	Support LTE-FDD: B1/B2/B3/B4/B5/B7/B8/B28 ³⁾ Support LTE-TDD: B40 Support WCDMA: B1/B2/B4/B5/B8 Support GSM: 850/900/1800/1900MHz Support LTE/WCDMA receive diversity ³⁾ Support GNSS ¹⁾ Support digital audio ²⁾
EC25-EX Mini PCIe	Support LTE-FDD: B1/B3/B5/B7/B8/B20 Support LTE-TDD: B38/B40/B41 Support WCDMA: B1/B5/B8 Support GSM: 900/1800MHz Support digital audio ²⁾
EC25-T Mini PCIe	Support LTE-FDD: B2/B4/B5/B12/ B66/B71 Support LTE receive diversity Support GNSS ¹⁾ Support digital audio ²⁾

NOTES

1. ¹⁾GNSS function is optional.
2. ²⁾Digital audio (PCM) function is only supported on **Telematics** version.
3. ³⁾B2 on EC25-AU and EC25-AUX Mini PCIe does not support Rx-diversity.

2.3. Key Features

The following table describes the detailed features of EC25 Mini PCIe module.

Table 2: Key Features of EC25 Mini PCIe

Features	Description
Function Interface	PCI Express Mini Card 1.2 Standard Interface
Power Supply	Supply voltage: 3.0V~3.6V Typical supply voltage: 3.3V
Transmitting Power	Class 4 (33dBm±2dB) for GSM850 Class 4 (33dBm±2dB) for EGSM900 Class 1 (30dBm±2dB) for DCS1800 Class 1 (30dBm±2dB) for PCS1900 Class E2 (27dBm±3dB) for GSM850 8-PSK Class E2 (27dBm±3dB) for EGSM900 8-PSK Class E2 (26dBm±3dB) for DCS1800 8-PSK Class E2 (26dBm±3dB) for PCS1900 8-PSK Class 3 (24dBm+1/-3dB) for WCDMA bands Class 3 (23dBm±2dB) for LTE-FDD bands Class 3 (23dBm±2dB) for LTE-TDD bands
LTE Features	Support up to 3GPP R8 non-CA Cat 4 FDD and TDD Support 1.4/3/5/10/15/20MHz RF bandwidth Support MIMO in DL direction LTE-FDD: Max 150Mbps (DL)/Max 50Mbps (UL) LTE-TDD: Max 130Mbps (DL)/Max 30Mbps (UL)
UMTS Features	Support 3GPP R8 DC-HSDPA, HSPA+, HSDPA, HSUPA and WCDMA Support QPSK, 16-QAM and 64-QAM modulation DC-HSDPA: Max 42Mbps (DL) HSUPA: Max 5.76Mbps (UL) WCDMA: Max 384Kbps (DL)/Max 384Kbps (UL)
GSM Features	GPRS: Support GPRS multi-slot class 33 (33 by default)

	<p>Coding scheme: CS-1, CS-2, CS-3 and CS-4 Max 107Kbps (DL)/Max 85.6Kbps (UL)</p> <p>EDGE: Support EDGE multi-slot class 33 (33 by default) Support GMSK and 8-PSK for different MCS (Modulation and Coding Scheme) Downlink coding schemes: CS 1-4 and MCS 1-9 Uplink coding schemes: CS 1-4 and MCS 1-9 Max 296Kbps (DL)/Max 236.8Kbps (UL)</p>
Internet Protocol Features	<p>Support TCP/UDP/PPP/FTP/FTPS/HTTP/HTTPS/NTP/PING/QMI/NITZ/ SMTP/SSL/MQTT/CMUX/SMTPS/MMS*/FILE* protocols</p> <p>Support protocols PAP (Password Authentication Protocol) and CHAP (Challenge Handshake Authentication Protocol) which are usually used for PPP connection</p>
SMS	<p>Text and PDU modes Point-to-point MO and MT SMS cell broadcast SMS storage: ME by default</p>
(U)SIM Interface	Support USIM/SIM card: 1.8V, 3.0V
UART Interfaces	<p>Main UART: Support RTS and CTS hardware flow control Baud rate can reach up to 230400bps, 115200bps by default Used for AT command communication and data transmission</p> <p>COEX UART*: LTE/WLAN&BT coexistence UART</p>
Audio Features	<p>Support one digital audio interface: PCM interface GSM: HR/FR/EFR/AMR/AMR-WB WCDMA: AMR/AMR-WB LTE: AMR/AMR-WB Support echo cancellation and noise suppression</p>
PCM Interface	<p>Support 16-bit linear data format Support long frame synchronization and short frame synchronization Support master and slave modes, but must be the master in long frame synchronization</p>
USB Interface	<p>Compliant with USB 2.0 specification (slave only); the data transfer rate can reach up to 480Mbps Used for AT command communication, data transmission, firmware upgrade, software debugging, GNSS NMEA output and voice over USB. Support USB serial drivers for: Windows 7/8/8.1/10, Linux 2.6~5.4, Android 4.x/5.x/6.x/7.x/8.x/9.x, etc.</p>
Antenna Connectors	Include main antenna, diversity antenna and GNSS antenna receptacle connectors

Rx-diversity (Optional)	Support LTE/WCDMA Rx-diversity
GNSS Features	Gen8C Lite of Qualcomm Protocol: NMEA 0183 Data update rate: 1Hz by default
AT Commands	Compliant with 3GPP TS 27.007, 27.005 and Quectel enhanced AT commands
Physical Characteristics	Size: (51.0±0.15)mm × (30.0±0.15)mm × (4.9±0.2)mm Weight: approx. 9.8g
Temperature Range	Operation temperature range: -35°C to +75°C ¹⁾ Extended temperature range: -40°C to +80°C ²⁾ Storage temperature range: -40°C to +90°C
Firmware Upgrade	Upgrade via USB interface or DFOTA
RoHS	All hardware components are fully compliant with EU RoHS directive

NOTES

1. ¹⁾ Within operation temperature range, the module is 3GPP compliant.
2. ²⁾ Within extended temperature range, the module remains the ability to establish and maintain a voice, SMS, data transmission, emergency call*, etc. There is no unrecoverable malfunction. There are also no effects on radio spectrum and no harm to radio network. Only one or more parameters like P_{out} might reduce in their value and exceed the specified tolerances. When the temperature returns to normal operation temperature levels, the module will meet 3GPP specifications again.
3. “**” means under development.

3 Application Interfaces

The physical connections and signal levels of EC25 Mini PCIe comply with PCI Express Mini Card Electromechanical Specification. This chapter mainly describes the definition and application of the following interfaces/pins of EC25 Mini PCIe.

- Power supply
- (U)SIM interface
- USB interface
- UART interfaces
- PCM and I2C interfaces
- Control and indication pins

3.1. Pin Assignment

The following figure shows the pin assignment of EC25 Mini PCIe module. The top side contains EC25 module and antenna connectors.

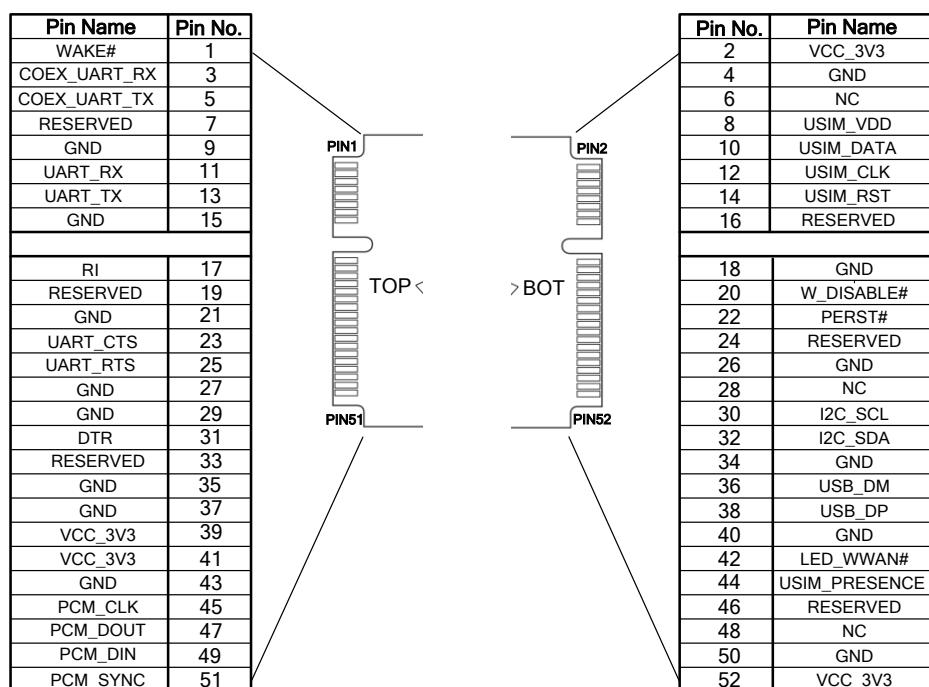

Figure 1: Pin Assignment

3.2. Pin Description

The following tables show the pin definition and description of the 52 pins on EC25 Mini PCIe.

Table 3: I/O Parameters Definition

Type	Description
DI	Digital Input
DO	Digital Output
IO	Bidirectional
OC	Open Collector
PI	Power Input
PO	Power Output
OD	Open drain

Table 4: Pin Description

Pin No.	Mini PCI Express Standard Name	EC25 Mini PCIe Pin Name	I/O	Description	Comment
1	WAKE#	WAKE#	OC	Output signal used to wake up the host.	
2	3.3Vaux	VCC_3V3	PI	3.0V~3.6V, typically 3.3V DC supply	
3	COEX1	COEX_UART_RX	DI	LTE/WLAN&BT coexistence receive signal	It is prohibited to be pulled up high before startup.
4	GND	GND		Mini card ground	
5	COEX2	COEX_UART_TX	DO	LTE/WLAN&BT coexistence transmitting signal	It is prohibited to be pulled up high before startup.
6	1.5V	NC		Not connected	
7	CLKREQ#	RESERVED		Reserved	

8	UIM_PWR	USIM_VDD	PO	Power supply for the (U)SIM card	
9	GND	GND		Mini card ground	
10	UIM_DATA	USIM_DATA	IO	Data signal of (U)SIM card	
11	REFCLK-	UART_RX	DI	UART receive data	Connect to DTE's TX.
12	UIM_CLK	USIM_CLK	DO	Clock signal of (U)SIM card	
13	REFCLK+	UART_TX	DO	UART transmit data	Connect to DTE's RX.
14	UIM_RESET	USIM_RST	DO	Reset signal of (U)SIM card	
15	GND	GND		Mini card ground	
16	UIM_VPP	RESERVED		Reserved	
17	RESERVED	RI	DO	Ring indication	
18	GND	GND		Mini card ground	
19	RESERVED	RESERVED		Reserved	
20	W_DISABLE#	W_DISABLE#	DI	Airplane mode control	Pulled up by default. Active low.
21	GND	GND		Mini card ground	
22	PERST#	PERST#	DI	Fundamental reset signal	Pulled up by default. Active low.
23	PERn0	UART_CTS	DI	UART clear to send	Connect to DTE's RTS.
24	3.3Vaux	RESERVED		Reserved	
25	PERp0	UART_RTS	DO	UART request to send	Connect to DTE's CTS.
26	GND	GND		Mini card ground	
27	GND	GND		Mini card ground	
28	1.5V	NC		Not connected	
29	GND	GND		Mini card ground	

30	SMB_CLK	I2C_SCL	OD	I2C serial clock	Require external pull-up to 1.8V.
31	PETn0	DTR	DI	Sleep mode control	
32	SMB_DATA	I2C_SDA	OD	I2C serial data	Require external pull-up to 1.8V.
33	PETp0	RESERVED		Reserved	
34	GND	GND		Mini card ground	
35	GND	GND		Mini card ground	
36	USB_D-	USB_DM	IO	USB differential data (-)	Require differential impedance of 90Ω.
37	GND	GND		Mini card ground	
38	USB_D+	USB_DP	IO	USB differential data (+)	Require differential impedance of 90Ω.
39	3.3Vaux	VCC_3V3	PI	3.0V~3.6V, typically 3.3V DC supply	
40	GND	GND		Mini card ground	
41	3.3Vaux	VCC_3V3	PI	3.0V~3.6V, typically 3.3V DC supply	
42	LED_WWAN#	LED_WWAN#	OC	LED signal for indicating the network status of the module	Active low
43	GND	GND		Mini card ground	
44	LED_WLAN#	USIM_PRESENCE	DI	(U)SIM card insertion detection	
45	RESERVED	PCM_CLK ¹⁾	IO	PCM clock signal	
46	LED_WPAN#	RESERVED		Reserved	
47	RESERVED	PCM_DOUT ¹⁾	DO	PCM data output	
48	1.5V	NC		Not connected	
49	RESERVED	PCM_DIN ¹⁾	DI	PCM data input	

50	GND	GND		Mini card ground
51	RESERVED	PCM_SYNC ¹⁾	IO	PCM frame synchronization
52	3.3Vaux	VCC_3V3	PI	3.0V~3.6V, typically 3.3V DC supply

NOTES

1. ¹⁾The digital audio (PCM) function is only supported on **Telematics** version.
2. Keep all NC, reserved and unused pins unconnected.

3.3. Operating Modes

The following table briefly outlines the operating modes to be mentioned in the following chapters.

Table 5: Overview of Operating Modes

Mode	Details
Normal Operation	Idle Software is active. The module has registered on the network, and it is ready to send and receive data.
	Talk/Data Network connection is ongoing. In this mode, the power consumption is decided by network setting and data transfer rate.
Minimum Functionality Mode	AT+CFUN command can set the module to a minimum functionality mode without removing the power supply. In this case, both RF function and (U)SIM card will be invalid.
Airplane Mode	AT+CFUN command or W_DISABLE# pin can set the module to airplane mode. In this case, RF function will be invalid.
Sleep Mode	In this mode, the current consumption of the module will be reduced to the minimal level. In this mode, the module can still receive paging message, SMS, voice call and TCP/UDP data from the network normally.

3.4. Power Saving

3.4.1. Sleep Mode

EC25 Mini PCIe is able to reduce its current consumption to a minimum value in sleep mode. There are three preconditions must be met to make the module enter sleep mode.

- Execute **AT+QSCLK=1** to enable sleep mode.
- Ensure the DTR is kept at high level or be kept open.
- The host's USB bus, which is connected with the module's USB interface, enters suspend state.

3.4.2. Airplane Mode

When the module enters airplane mode, the RF function will be disabled, and all AT commands related to it will be inaccessible. For more details, please refer to **Chapter 3.10.3**.

3.5. Power Supply

The following table shows pin definition of VCC_3V3 pins and ground pins.

Table 6: Definition of VCC_3V3 and GND Pins

Pin Name	Pin No.	I/O	Power Domain	Description
VCC_3V3	2, 39, 41, 52	PI	3.0V~3.6V	Typically 3.3V DC supply
GND	4, 9, 15, 18, 21, 26, 27, 29, 34, 35, 37, 40, 43, 50			Mini card ground

The typical supply voltage of EC25 Mini PCIe is 3.3V. In the 2G network, the input peak current may reach 2.7A during the transmitting time. Therefore, the power supply must be able to provide a rated output current of 2.7A at least, and a bypass capacitor of no less than 470μF with low ESR should be used to prevent the voltage from dropping. If the switching power supply is used to supply power to the module, the power device and power supply routing traces of the switching power supply should avoid the antennas as much as possible to prevent EMI interference.

The following figure shows a reference design of power supply where R2 and R3 are 1% tolerance resistors and C3 is a low-ESR capacitor.

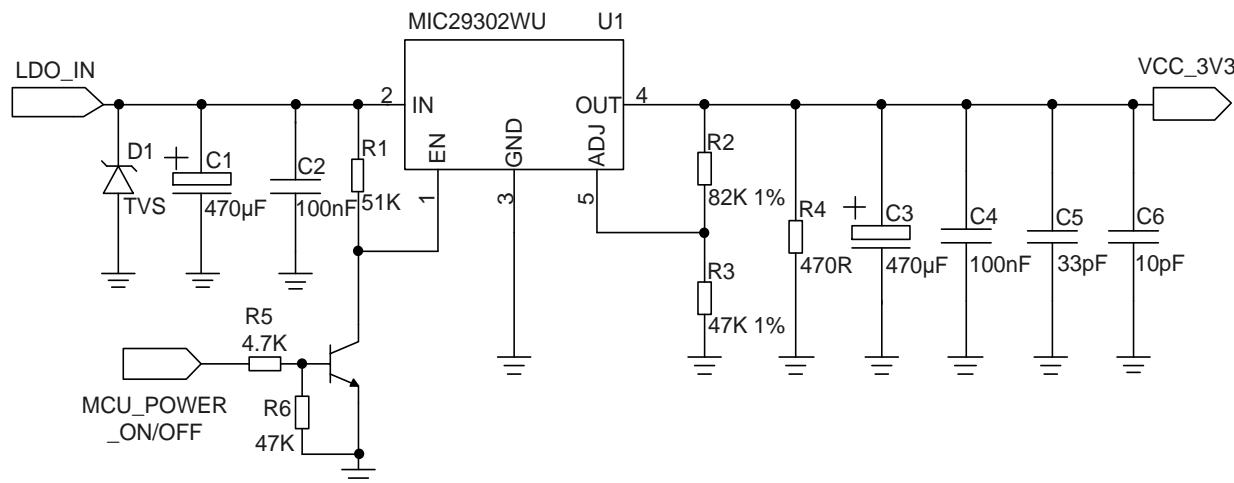

Figure 2: Reference Circuit of Power Supply

3.6. (U)SIM Interface

EC25 Mini PCIe's (U)SIM interface circuitry meets ETSI and IMT-2000 requirements. Both 1.8V and 3.0V (U)SIM cards are supported. The following table shows the pin definition of (U)SIM interface.

Table 7: Pin Definition of (U)SIM Interface

Pin Name	Pin No.	I/O	Power Domain	Description
USIM_VDD	8	PO	1.8V/3.0V	Power supply for (U)SIM card
USIM_DATA	10	IO	1.8V/3.0V	Data signal of (U)SIM card
USIM_CLK	12	DO	1.8V/3.0V	Clock signal of (U)SIM card
USIM_RST	14	DO	1.8V/3.0V	Reset signal of (U)SIM card
USIM_PRESENCE	44	DI	1.8V	(U)SIM card insertion detection

EC25 Mini PCIe supports (U)SIM card hot-plug via the USIM_PRESENCE pin. The function supports low level and high level detections. By default, it is disabled, and can be configured via **AT+QSIMDET** command. Please refer to **document [2]** for details about the command.

The following figure shows a reference design for (U)SIM interface with an 8-pin (U)SIM card connector.

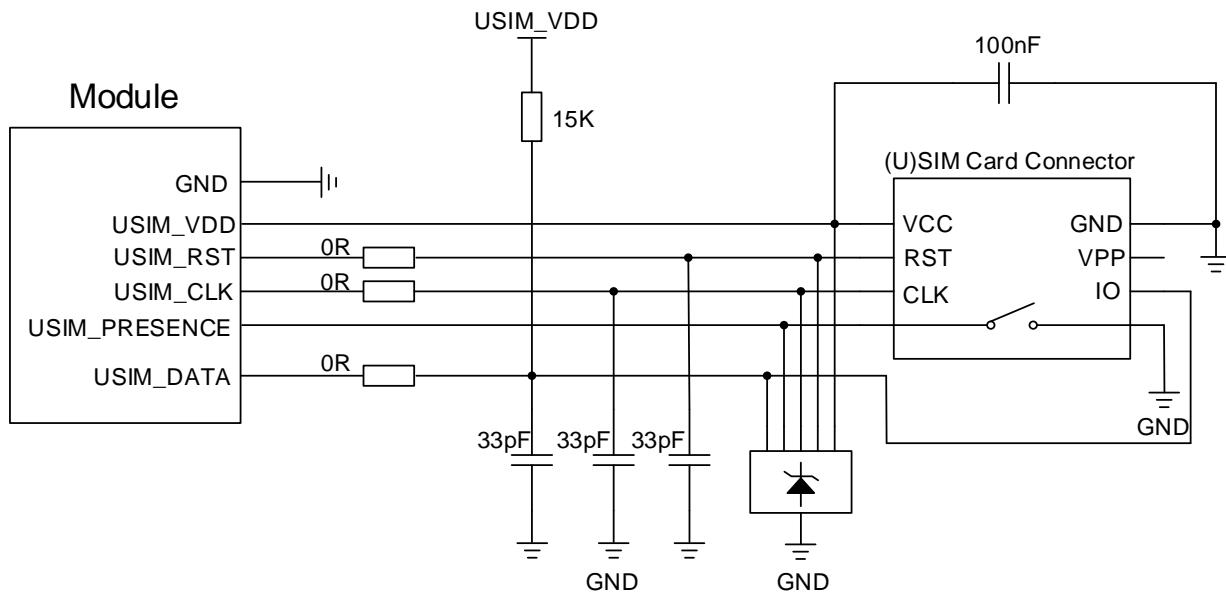

Figure 3: Reference Circuit of (U)SIM Interface with an 8-pin (U)SIM Card Connector

If (U)SIM card detection function is not needed, please keep USIM_PRESENCE unconnected. A reference circuit for (U)SIM interface with a 6-pin (U)SIM card connector is illustrated in the following figure.

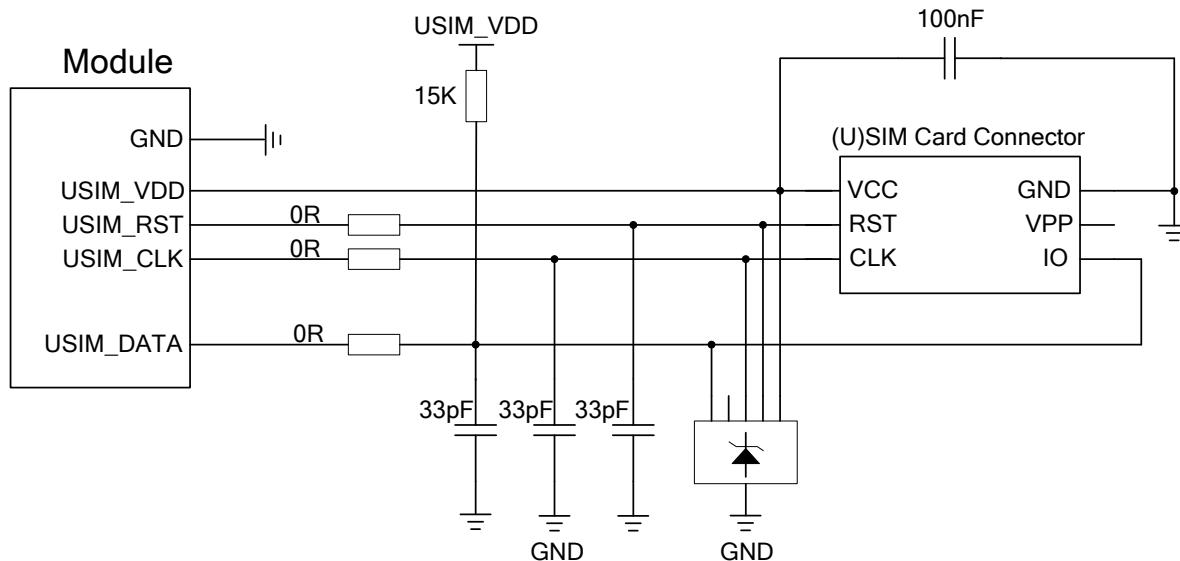

Figure 4: Reference Circuit of (U)SIM Interface with a 6-pin (U)SIM Card Connector

In order to enhance the reliability and availability of the (U)SIM card in customers' applications, please follow the criteria below in (U)SIM circuit design:

- Keep placement of (U)SIM card connector to the module as close as possible. Keep the trace length as less than 200mm as possible.
- Keep (U)SIM card signals away from RF and power supply traces.
- To avoid cross-talk between USIM_DATA and USIM_CLK, keep them away from each other and shield them with surrounded ground.
- In order to offer good ESD protection, it is recommended to add a TVS diode with parasitic capacitance not exceeding 15pF.
- The 0Ω resistors should be added in series between the module and the (U)SIM card connector so as to facilitate debugging. The 33pF capacitors are used for filtering interference of EGSM900. Please note that the (U)SIM peripheral circuit should be close to the (U)SIM card connector.
- The pull-up resistor on USIM_DATA line can improve anti-jamming capability when long layout trace and sensitive occasion are applied, and should be placed close to the (U)SIM card connector.

3.7. USB Interface

EC25 Mini PCIe provides one integrated Universal Serial Bus (USB) interface which complies with USB 2.0 specification. It can only be used as a slave device. Meanwhile, it supports high speed (480Mbps) mode and full speed (12Mbps) mode. The USB interface is used for AT command communication, data transmission, GNSS NMEA output, software debugging, firmware upgrade and voice over USB.

The following table shows the pin definition of USB interface.

Table 8: Pin Definition of USB Interface

Pin Name	Pin No.	I/O	Description	Comment
USB_DM	36	IO	USB differential data (-)	Require differential impedance of 90Ω
USB_DP	38	IO	USB differential data (+)	Require differential impedance of 90Ω

The following figure shows a reference circuit of USB interface.

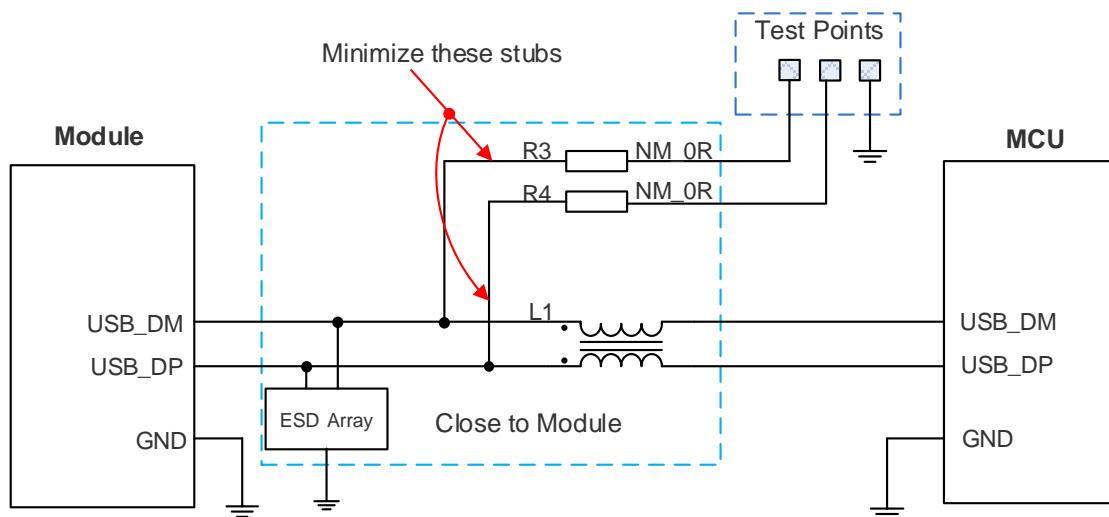

Figure 5: Reference Circuit of USB Interface

A common mode choke L1 is recommended to be added in series between the module and customer's MCU in order to suppress EMI spurious transmission. Meanwhile, the 0Ω resistors (R3 and R4) should be added in series between the module and the test points so as to facilitate debugging, and the resistors are not mounted by default. In order to ensure the integrity of USB data line signal, L1/R3/R4 components must be placed close to the module, and also these resistors should be placed close to each other. The extra stubs of trace must be as short as possible.

The following principles should be complied with when design the USB interface, so as to meet USB 2.0 specification.

- It is important to route the USB signal traces as differential pairs with total grounding. The impedance of USB differential trace is 90Ω.
- Do not route signal traces under crystals, oscillators, magnetic devices and RF signal traces. It is important to route the USB differential traces in inner layer with ground shielding on not only upper and lower layers but also right and left sides.
- Keep the ESD protection components to the USB connector as close as possible.

3.8. UART Interfaces

The following table shows the pin definition of the main UART and COEX UART* interfaces.

3.8.1. Main UART Interface

The main UART interface supports 9600bps, 19200bps, 38400bps, 57600bps, 115200bps and 230400bps baud rates, and the default is 115200bps. This interface supports RTS and CTS hardware flow control, and be used for AT command communication and data transmission.

The following table shows the pin definition of the main UART interface.

Table 9: Pin Definition of Main UART Interface

Pin Name	Pin No.	I/O	Power Domain	Description
UART_RX	11	DI	3.3V	UART receive data
UART_TX	13	DO	3.3V	UART transmit data
UART_CTS	23	DI	3.3V	UART clear to send
UART_RTS	25	DO	3.3V	UART request to send

The signal level of main UART interface is 3.3V. When connecting to the peripheral MCU/RAM, customers need to pay attention to the signal direction. The reference circuit is as follows:

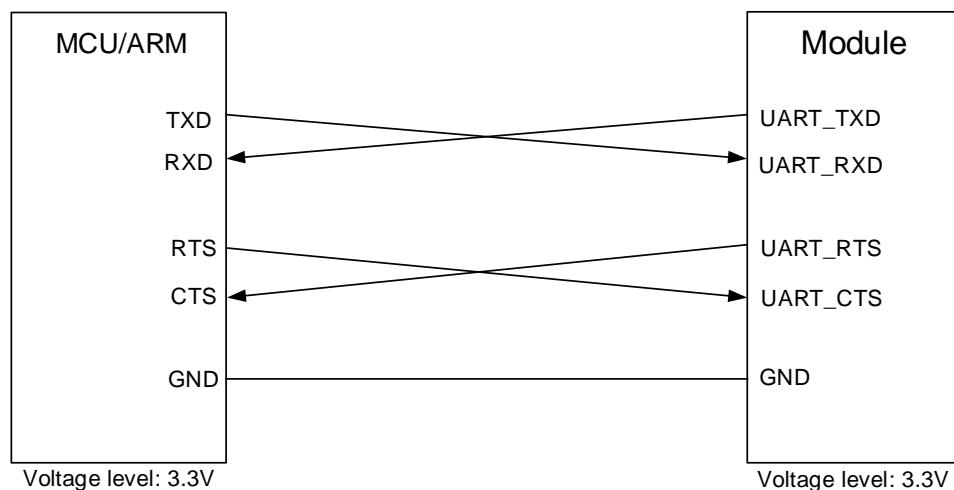

Figure 6: Reference Circuit of Power Supply

3.8.2. COEX UART Interface*

The following table shows the pin definition of the COEX UART interface.

Table 10: Pin Definition of COEX UART Interface

Pin No.	Pin Name	I/O	Power Domain	Description
3	COEX_UART_RX	DI	1.8V	LTE/WLAN&BT coexistence receive signal.

				It is prohibited to be pulled up high before startup.
5	COEX_UART_TX	DO	1.8V	LTE/WLAN&BT coexistence transmitting signal. It is prohibited to be pulled up high before startup.

NOTES

1. **AT+IPR** command can be used to set the baud rate of the main UART, and **AT+IFC** command can be used to set the hardware flow control (hardware flow control is disabled by default). Please refer to **document [2]** for details.
2. “*” means under development.

3.9. PCM and I2C Interfaces

EC25 Mini PCIe provides one Pulse Code Modulation (PCM) digital interface and one I2C interface.

The following table shows the pin definition of PCM and I2C interfaces that can be applied in audio codec design.

Table 11: Pin Definition of PCM and I2C Interfaces

Pin Name	Pin No.	I/O	Power Domain	Description
PCM_CLK	45	IO	1.8V	PCM clock signal
PCM_DOUT	47	DO	1.8V	PCM data output
PCM_DIN	49	DI	1.8V	PCM data input
PCM_SYNC	51	IO	1.8V	PCM frame synchronization
I2C_SCL	30	OD	1.8V	I2C serial clock. Require external pull-up to 1.8V.
I2C_SDA	32	OD	1.8V	I2C serial data. Require external pull-up to 1.8V.

EC25 Mini PCIe provides one PCM digital interface, which supports 16-bit linear data format and the following modes:

- Primary mode (short frame synchronization, works as either master or slave)
- Auxiliary mode (long frame synchronization, works as master only)

NOTE

The digital audio (PCM) function is only supported on **Telematics** version.

In primary mode, the data is sampled on the falling edge of the PCM_CLK and transmitted on the rising edge. The PCM_SYNC falling edge represents the MSB. In this mode, the PCM interface supports 256kHz, 512kHz, 1024kHz or 2048kHz PCM_CLK at 8kHz PCM_SYNC, and also supports 4096kHz PCM_CLK at 16kHz PCM_SYNC. The following figure shows the timing relationship in primary mode with 8kHz PCM_SYNC and 2048kHz PCM_CLK.

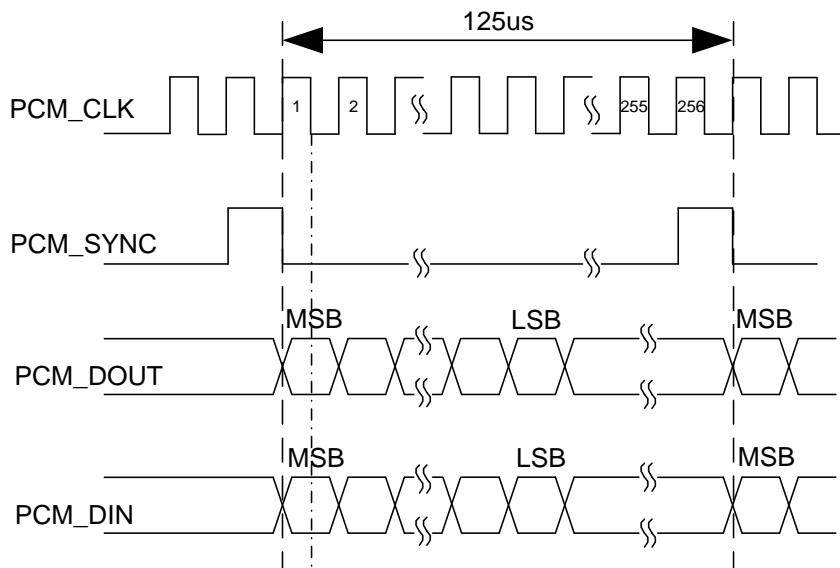

Figure 7: Timing in Primary Mode

In auxiliary mode, the data is sampled on the falling edge of the PCM_CLK and transmitted on the rising edge. The PCM_SYNC rising edge represents the MSB. In this mode, the PCM interface operates with a 256kHz, 512kHz, 1024kHz or 2048kHz PCM_CLK and an 8KHz, 50% duty cycle PCM_SYNC. The following figure shows the timing relationship in auxiliary mode with 8kHz PCM_SYNC and 256kHz PCM_CLK.

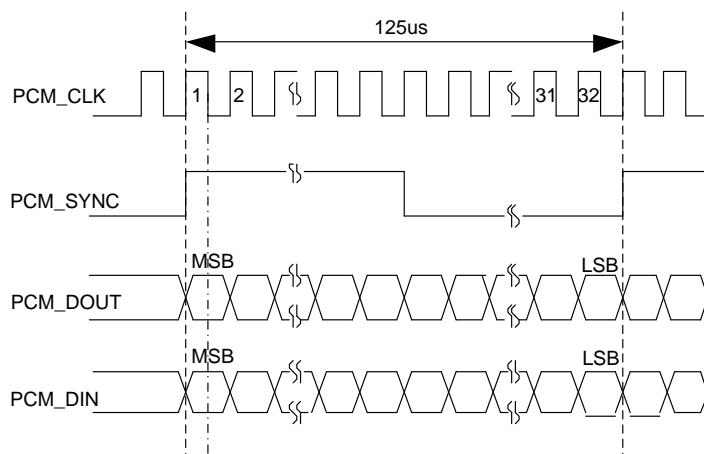

Figure 8: Timing in Auxiliary Mode

Clock and mode can be configured by AT command, and the default configuration is master mode using short frame synchronization format with 2048kHz PCM_CLK and 8kHz PCM_SYNC. In addition, EC25 Mini PCIe's firmware has integrated the configuration on some PCM codec's application with I2C interface. Please refer to [document \[2\]](#) for details about **AT+QDAI** command.

The following figure shows a reference design of PCM interface with an external codec IC.

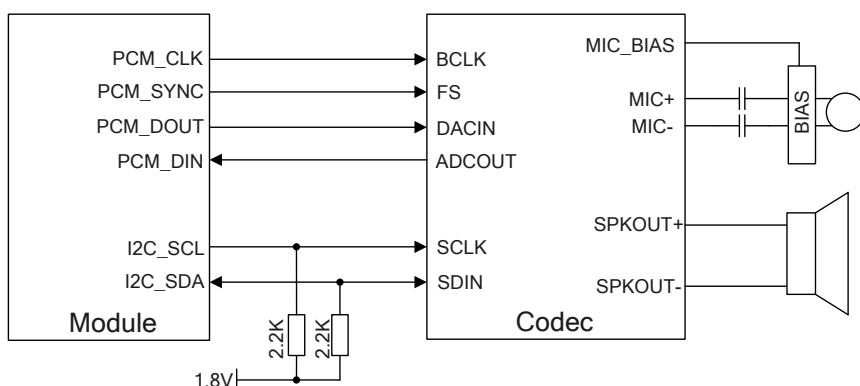

Figure 9: Reference Circuit of PCM Application with Audio Codec

NOTE

Digital audio (PCM) function is only supported on **Telematics** version.

3.10. Control and Indication Signals

The following table shows the pin definition of control and indication signals.

Table 12: Pin Definition of Control and Indication Signals

Pin Name	Pin No.	I/O	Power Domain	Description
RI	17	DO	3.3V	Output signal used to wake up the host
DTR	31	DI	3.3V	Sleep mode control
W_DISABLE#	20	DI	3.3V	Airplane mode control; Pulled up by default; Active low.
PERST#	22	DI	3.3V	Fundamental reset signal; Active low.
LED_WWAN#	42	OC		LED signal for indicating the network status of the module; Active low.
WAKE#	1	OC		Output signal to wake up the host.

3.10.1. RI Signal

The RI signal can be used to wake up the host. When a URC returns, there will be the following behaviors on the RI pin after executing **AT+QCFG="risignaltype","physical"**.

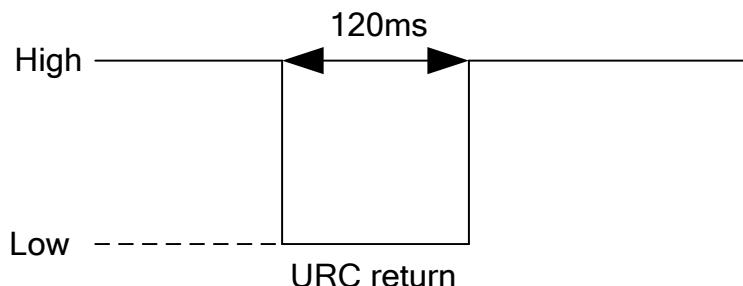

Figure 10: RI Behaviors

3.10.2. DTR Signal

The DTR signal is used for sleep mode control. It is pulled up by default. When module is in sleep mode, driving it to low level can wake up the module. For more details about the preconditions for module to enter sleep mode, please refer to **Chapter 3.4.1**.

3.10.3. W_DISABLE# Signal

EC25 Mini PCIe provides a W_DISABLE# signal to disable or enable the RF function (excluding GNSS). The W_DISABLE# pin is pulled up by default. Its control function for airplane mode is disabled by default, and **AT+QCFG="airplanecontrol",1** can be used to enable the function. Driving it to low level can make the module enter airplane mode.

The RF function can also be enabled or disabled through AT commands **AT+CFUN**, and the details are as follows.

Table 13: Airplane Mode Controlled by Hardware Method

W_DISABLE#	RF Function Status	Module Operation Mode
High level	RF enabled	Normal mode
Low level	RF disabled	Airplane mode

Software method can be controlled by **AT+CFUN**, and the details are as follows.

Table 14: Airplane Mode Controlled by Software Method

AT+CFUN=?	RF Function Status	Module Operation Mode
0	RF and (U)SIM disabled	Minimum functionality mode
1	RF enabled	Normal mode
4	RF disabled	Airplane mode

3.10.4. PERST# Signal

The PERST# signal can be used to force a hardware reset on the card. The module can be reset by driving the PERST# signal low for 150ms~460ms and then releasing it. The PERST# signal is sensitive to interference. The traces should be as short as possible and be surrounded with ground. The reset scenario is illustrated in the following figure.

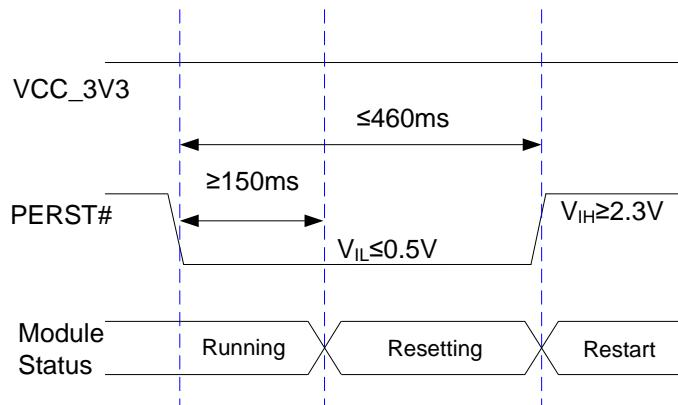

Figure 11: Timing of Resetting Module

3.10.5. LED_WWAN# Signal

The LED_WWAN# signal of EC25 Mini PCIe is used to indicate the network status of the module, and can absorb a current up to 40mA. According to the following circuit, in order to reduce the current of the LED, a resistor must be placed in series with the LED.

The LED is emitting light when the LED_WWAN# output signal is low.

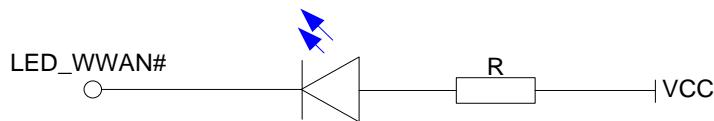

Figure 12: LED_WWAN# Signal Reference Circuit Diagram

There are two indication modes for LED_WWAN# signal to indicate network status, which can be switched through following AT commands:

- **AT+QCFG="ledmode",0 (Default setting)**
- **AT+QCFG="ledmode",2**

The following tables show the detailed network status indications of the LED_WWAN# signal.

Table 15: Indications of Network Status (AT+QCFG="ledmode",0, Default Setting)

Pin Status	Description
Flicker slowly (200ms Low/1800ms High)	Network searching
Flicker slowly (1800ms Low/200ms High)	Idle
Flicker quickly (125ms Low/125ms High)	Data transfer is ongoing
Always Low	Voice calling

Table 16: Indications of Network Status (AT+QCFG="ledmode",2)

Pin Status	Description
Low Level (Light ON)	Registered on network successfully
High Impedance (Light OFF)	<ul style="list-style-type: none"> ● No network coverage or not registered ● W_DISABLE# signal is at low level. (Disable RF) ● AT+CFUN=0, AT+CFUN=4

3.10.6. WAKE# Signal

The WAKE# signal is an open collector signal which is similar to RI signal, but a host pull-up resistor and **AT+QCFG="risignaltypes","physical"** command are required. When a URC returns, a 120ms low level pulse will be outputted. The state of WAKE# signal is shown as below.

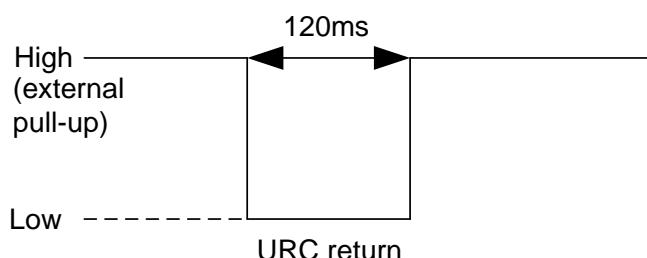

Figure 13: WAKE# Behavior

4 GNSS Receiver

4.1. General Description

EC25 Mini PCIe includes a fully integrated global navigation satellite system solution that supports Qualcomm Gen8C Lite (GPS, GLONASS, BeiDou/Compass, Galileo and QZSS). Additionally, it supports standard NMEA-0183 protocol, and outputs NMEA sentences at 1Hz data update rate via USB interface by default.

By default, EC25 Mini PCIe GNSS engine is switched off. It has to be switched on via AT command. For more details about GNSS engine technology and configurations, please refer to **document [3]**.

4.2. GNSS Performance

The following table shows the GNSS performance of EC25 Mini PCIe.

Table 17: GNSS Performance

Parameter	Description	Conditions	Typ.	Unit
Sensitivity (GNSS)	Cold start	Autonomous	-146	dBm
	Reacquisition	Autonomous	-157	dBm
	Tracking	Autonomous	-157	dBm
TTFF (GNSS)	Cold start @open sky	Autonomous	35	s
		XTRA enabled	18	s
TTFF (GNSS)	Warm start @open sky	Autonomous	26	s
		XTRA enabled	2.2	s
	Hot start @open sky	Autonomous	2.5	s
		XTRA enabled	1.8	s

Accuracy (GNSS)	CEP-50	Autonomous @open sky	<2.5	m
--------------------	--------	-------------------------	------	---

NOTES

1. Tracking sensitivity: the minimum GNSS signal power at which the module can maintain lock (keep positioning for at least 3 minutes continuously).
2. Reacquisition sensitivity: the minimum GNSS signal power required for the module to maintain lock within 3 minutes after loss of lock.
3. Cold start sensitivity: the minimum GNSS signal power at which the module can fix position successfully within 3 minutes after executing cold start command.

4.3. GNSS Frequency

The following table shows the GNSS frequency of EC25 Mini PCIe.

Table 18: GNSS Frequency

Type	Frequency	Unit
GPS	1575.42±1.023	MHz
GLONASS	1597.5~1605.8	MHz
Galileo	1575.42±2.046	MHz
BeiDou (Compass)	1561.098±2.046	MHz
QZSS	1575.42	MHz

5 Antenna Connection

5.1. Antenna Connectors

EC25 Mini PCIe is mounted with three antenna connectors for external antenna connection: a main antenna connector, an Rx-diversity antenna connector, and a GNSS antenna connector. And Rx-diversity function is enabled by default. The impedance of the antenna connectors is 50Ω.

5.1.1. Operating Frequency

Table 19: Operating Frequencies

3GPP Band	Transmit	Receive	Unit
GSM850	824~849	869~894	MHz
EGSM900	880~915	925~960	MHz
DCS1800	1710~1785	1805~1880	MHz
PCS1900	1850~1910	1930~1990	MHz
WCDMA B1	1920~1980	2110~2170	MHz
WCDMA B2	1850~1910	1930~1990	MHz
WCDMA B4	1710~1755	2110~2155	MHz
WCDMA B5	824~849	869~894	MHz
WCDMA B6	830~840	875~885	MHz
WCDMA B8	880~915	925~960	MHz
WCDMA B19	830~845	875~890	MHz
LTE-FDD B1	1920~1980	2110~2170	MHz
LTE-FDD B2	1850~1910	1930~1990	MHz

LTE-FDD B3	1710~1785	1805~1880	MHz
LTE-FDD B4	1710~1755	2110~2155	MHz
LTE-FDD B5	824~849	869~894	MHz
LTE-FDD B7	2500~2570	2620~2690	MHz
LTE-FDD B8	880~915	925~960	MHz
LTE-FDD B12	699~716	729~746	MHz
LTE-FDD B13	777~787	746~756	MHz
LTE-FDD B14	788~798	758~768	MHz
LTE-FDD B18	815~830	860~875	MHz
LTE-FDD B19	830~845	875~890	MHz
LTE-FDD B20	832~862	791~821	MHz
LTE-FDD B26	814~849	859~894	MHz
LTE-FDD B28	703~748	758~803	MHz
LTE-TDD B38	2570~2620	2570~2620	MHz
LTE-TDD B40	2300~2400	2300~2400	MHz
LTE-TDD B41	2555~2655	2555~2655	MHz
LTE-FDD B66	1710~1780	2100~2200	MHz
LTE-FDD B71	663~698	617~652	MHz

5.2. Antenna Requirements

The following table shows the requirements on main antenna, Rx-diversity antenna and GNSS antenna.

Table 20: Antenna Requirements

Type	Requirements
GNSS ¹⁾	<p>Frequency range: 1559MHz~1609MHz Polarization: RHCP or linear VSWR: < 2 (Typ.) Passive antenna gain: > 0dBi Active antenna noise figure: < 1.5dB Active antenna gain: > 0dBi Active antenna embedded LNA gain: < 17dB</p>
GSM/UMTS/LTE	<p>VSWR: ≤ 2 Efficiency: > 30% Max input power: 50W Input impedance: 50Ω Cable insertion loss: < 1dB (GSM850, EGSM900, WCDMA B5/B6/B8/B19, LTE-FDD B5/B8/B12/B13/B14/B18/B19/B20/B26/B28/B71) Cable insertion loss: < 1.5dB (DCS1800, PCS1900, WCDMA B1/B2/B4, LTE-FDD B1/B2/B3/B4/B66) Cable insertion loss: < 2dB (LTE-FDD B7, LTE-TDD B38/B40/B41)</p>

NOTES

1. It is recommended to use a passive GNSS antenna when LTE B13 or B14 is supported, as the use of active antenna may generate harmonics which will affect the GNSS performance.
2. Since the GNSS port has a 2.85V voltage output, a passive antenna that causes shorting to GND, such as PIFA antenna is not recommended.

5.3. Recommended Mating Plugs for Antenna Connection

EC25 Mini PCIe is mounted with RF connectors (receptacles) for convenient antenna connection. The dimensions of the antenna connectors are shown as below.

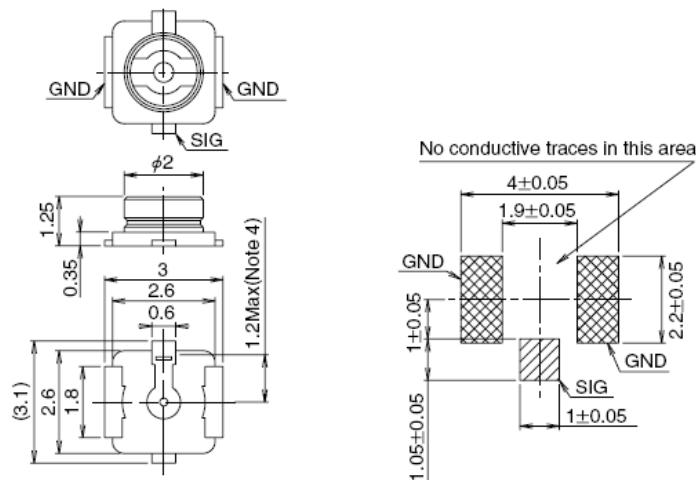

Figure 14: Dimensions of the Receptacle RF Connectors (Unit: mm)

U.FL-LP mating plugs listed in the following figure can be used to match the receptacles.

Part No.	U.FL-LP-040	U.FL-LP-066	U.FL-LP(V)-040	U.FL-LP-062	U.FL-LP-088
Mated Height	2.5mm Max. (2.4mm Nom.)	2.5mm Max. (2.4mm Nom.)	2.0mm Max. (1.9mm Nom.)	2.4mm Max. (2.3mm Nom.)	2.4mm Max. (2.3mm Nom.)
Applicable cable	Dia. 0.81mm Coaxial cable	Dia. 1.13mm and Dia. 1.32mm Coaxial cable	Dia. 0.81mm Coaxial cable	Dia. 1mm Coaxial cable	Dia. 1.37mm Coaxial cable
Weight (mg)	53.7	59.1	34.8	45.5	71.7
RoHS			YES		

Figure 15: Mechanics of U.FL-LP Mating Plugs

The following figure describes the space factor of mating plugs.

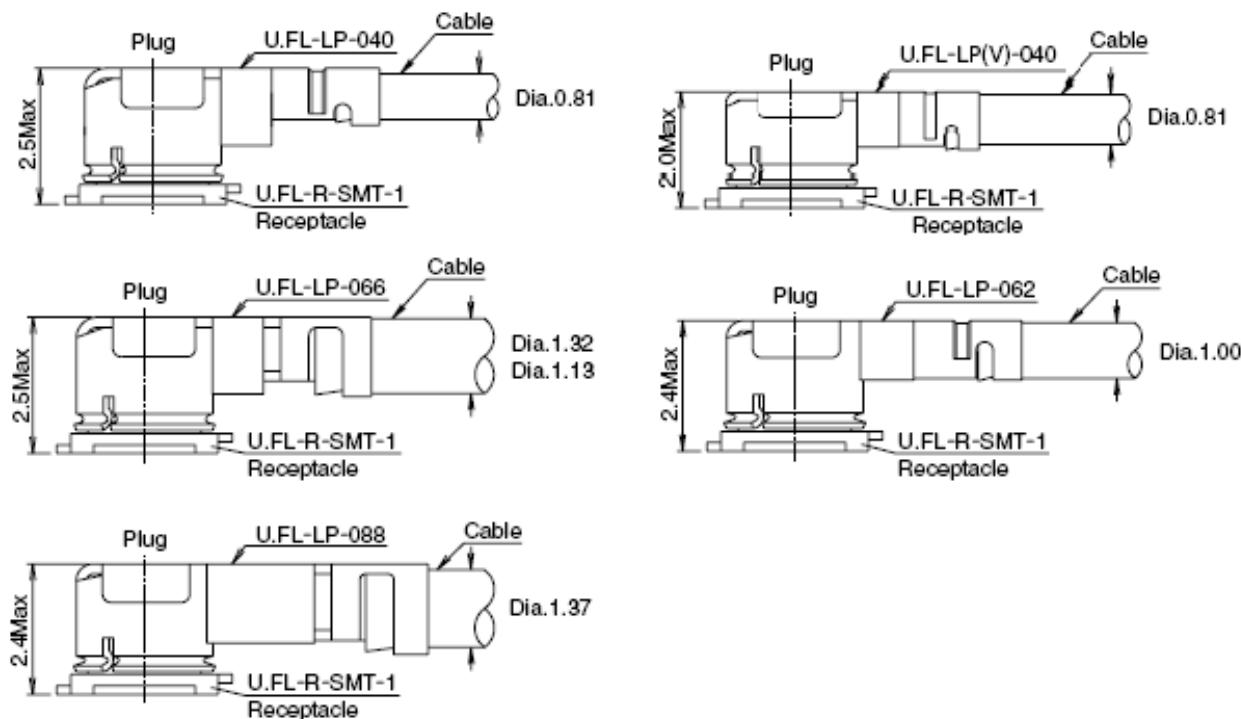

Figure 16: Space Factor of Mating Plugs (Unit: mm)

For more details of the recommended mating plugs, please visit <http://www.hirose.com>.

6 Electrical, Reliability and Radio Characteristics

6.1. General Description

This chapter mainly describes the following electrical and radio characteristics of EC25 Mini PCIe:

- Power supply requirements
- I/O requirements
- RF characteristics
- ESD characteristics
- Current consumption
- Thermal consideration

6.2. Power Supply Requirements

The input voltage of EC25 Mini PCIe is 3.0V~3.6V, as specified by *PCI Express Mini CEM Specifications 1.2*. The following table shows the power supply requirements of EC25 Mini PCIe.

Table 21: Power Supply Requirements

Parameter	Description	Min.	Typ.	Max.	Unit
VCC_3V3	Power Supply	3.0	3.3	3.6	V

6.3. I/O Requirements

The following table shows the I/O requirements of EC25 Mini PCIe.

Table 22: I/O Requirements

Parameter	Description	Min.	Max.	Unit
V_{IH}	Input High Voltage	$0.7 \times VCC_3V3$	$VCC_3V3 + 0.3$	V
V_{IL}	Input Low Voltage	-0.3	$0.3 \times VCC_3V3$	V
V_{OH}	Output High Voltage	$VCC_3V3 - 0.5$	VCC_3V3	V
V_{OL}	Output Low Voltage	0	0.4	V

NOTES

1. The PCM and I2C interfaces belong to 1.8V power domain and other I/O interfaces belong to VCC_3V3 power domain.
2. The maximum voltage value of V_{IL} for PERST# signal and W_DISABLE# signal is 0.5V.

6.4. RF Characteristics

The following tables show the conducted RF output power and receiving sensitivity of EC25 Mini PCIe module.

Table 23: Conducted RF Output Power of EC25 Mini PCIe

Frequency Bands	Max.	Min.
GSM850/EGSM900	$33\text{dBm}\pm2\text{dB}$	$5\text{dBm}\pm5\text{dB}$
DCS1800/PCS1900	$30\text{dBm}\pm2\text{dB}$	$0\text{dBm}\pm5\text{dB}$
GSM850/EGSM900 (8-PSK)	$27\text{dBm}\pm3\text{dB}$	$5\text{dBm}\pm5\text{dB}$
DCS1800/PCS1900 (8-PSK)	$26\text{dBm}\pm3\text{dB}$	$0\text{dBm}\pm5\text{dB}$
WCDMA bands	$24\text{dBm}+1/-3\text{dB}$	< -49dBm

LTE-FDD bands	23dBm±2dB	< -39dBm
LTE-TDD bands	23dBm±2dB	< -39dBm

NOTE

¹⁾ SIMO is a smart antenna technology that uses a single antenna at the transmitter side and two antennas at the receiver side, which can improve RX performance.

6.5. ESD Characteristics

The following table shows the ESD characteristics of EC25 Mini PCIe.

Table 38: ESD Characteristics of EC25 Mini PCIe

Tested Interfaces	Contact Discharge	Air Discharge	Unit
Power Supply and GND	+/-5	+/-10	kV
Antenna Interfaces	+/-4	+/-8	kV
USB Interface	+/-4	+/-8	kV
(U)SIM Interface	+/-4	+/-8	kV

Others	+/-0.5	+/-1	kV
--------	--------	------	----

6.6. Current Consumption

The following tables describe the current consumption of EC25 Mini PCIe series module.

Table 39: Current Consumption of EC25-A Mini PCIe

Parameter	Description	Conditions	Typ.	Unit
Sleep state		AT+CFUN=0 (USB disconnected)	3.6	mA
		WCDMA PF=64 (USB disconnected)	4.4	mA
		WCDMA PF=128 (USB disconnected)	3.8	mA
		LTE-FDD PF=64 (USB disconnected)	5.9	mA
		LTE-FDD PF=128 (USB disconnected)	4.8	mA
		WCDMA PF=64 (USB disconnected)	27.0	mA
		WCDMA PF=64 (USB connected)	40.0	mA
		LTE-FDD PF=64 (USB disconnected)	43.0	mA
Idle state		LTE-FDD PF=64 (USB connected)	59.0	mA
		WCDMA B2 HSDPA @22.63dBm	764.0	mA
		WCDMA B2 HSUPA @23.19dBm	741.0	mA
		WCDMA B4 HSDPA @22.45dBm	745.0	mA
		WCDMA B4 HSUPA @22.57dBm	752.0	mA
		WCDMA B5 HSDPA @22.49dBm	616.0	mA
		WCDMA B5 HSUPA @22.43dBm	637.0	mA
		LTE-FDD B2 @22.92dBm	977.0	mA
LTE data transfer (GNSS OFF)		LTE-FDD B4 @23.42dBm	1094.0	mA
		LTE-FDD B12 @23.39dBm	847.0	mA

WCDMA voice call	WCDMA B2 @23.59dBm	861.0	mA
	WCDMA B4 @23.47dBm	812.0	mA
	WCDMA B5 @23.46dBm	683.0	mA

Table 51: GNSS Current Consumption of EC25 Mini PCIe Series Module

Parameter	Description	Conditions	Typ.	Unit
I_{VBAT} (GNSS)	Searching (AT+CFUN=0)	Cold start @Passive Antenna	75.0	mA
		Lost state @Passive Antenna	74.0	mA
	Tracking (AT+CFUN=0)	Instrument environment	44.0	mA
		Open Sky @Passive Antenna	53.0	mA
		Open Sky @Active Antenna	58.0	mA

6.7. Thermal Consideration

In order to achieve better performance of the module, it is recommended to comply with the following principles for thermal consideration:

- On customers' PCB design, please keep placement of the PCI Express Mini Card away from heating sources.
- Do not place components on the PCB area where the module is mounted, in order to facilitate adding of heatsink.
- Do not apply solder mask on the PCB area where the module is mounted, so as to ensure better heat dissipation performance.
- The reference ground of the area where the module is mounted should be complete, and add ground

vias as many as possible for better heat dissipation.

- Add a heatsink on the top of the module and the heatsink should be designed with as many fins as possible to increase heat dissipation area. Meanwhile, a thermal pad with high thermal conductivity should be used between the heatsink and module.
- Add a thermal pad with appropriate thickness at the bottom of the module to conduct the heat to PCB.

The following figure shows the referenced heatsink design.

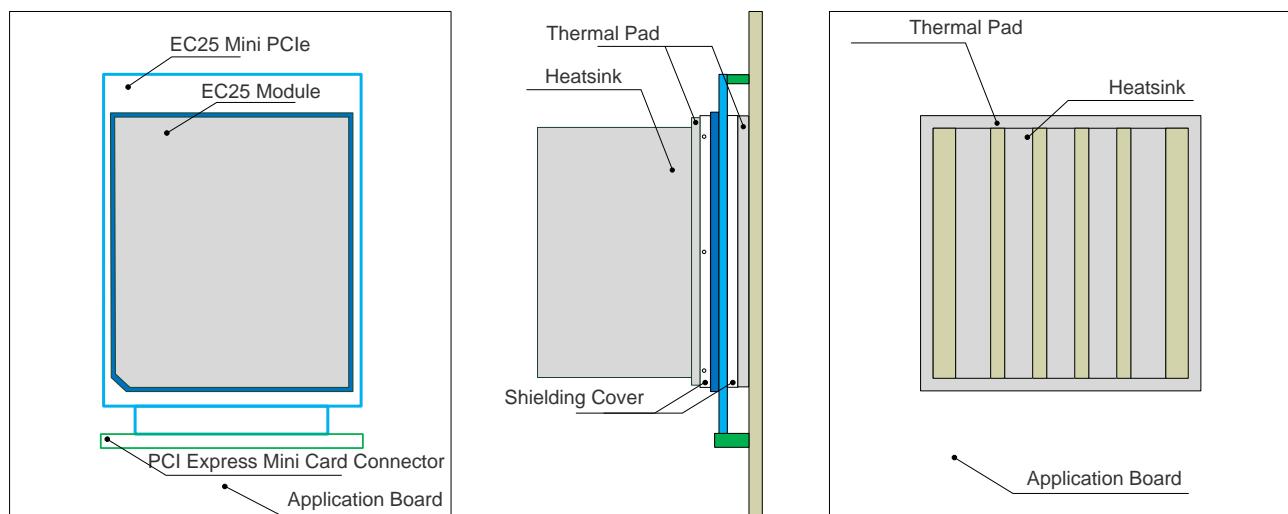

Figure 17: Referenced Heatsink Design

NOTES

1. The module offers the best performance when the internal BB chip stays below 105°C. When the maximum temperature of the BB chip reaches or exceeds 105°C, the module works normal but provides reduced performance (such as RF output power, data rate, etc.). When the maximum BB chip temperature reaches or exceeds 115°C, the module will disconnect from the network, and it will recover to network connected state after the maximum temperature falls below 115°C. Therefore, the thermal design should be maximally optimized to make sure the maximum BB chip temperature always maintains below 105°C. Customers can execute **AT+QTEMP** command and get the maximum BB chip temperature from the first returned value.
2. For more detailed guidelines on thermal design, please refer to **document [4]**.

7 Dimensions and Packaging

7.1. General Description

This chapter mainly describes mechanical dimensions as well as packaging specification of EC25 Mini PCIe module. All dimensions are measured in millimeter (mm), and the dimensional tolerances are $\pm 0.05\text{mm}$ unless otherwise specified.

7.2. Mechanical Dimensions of EC25 Mini PCIe

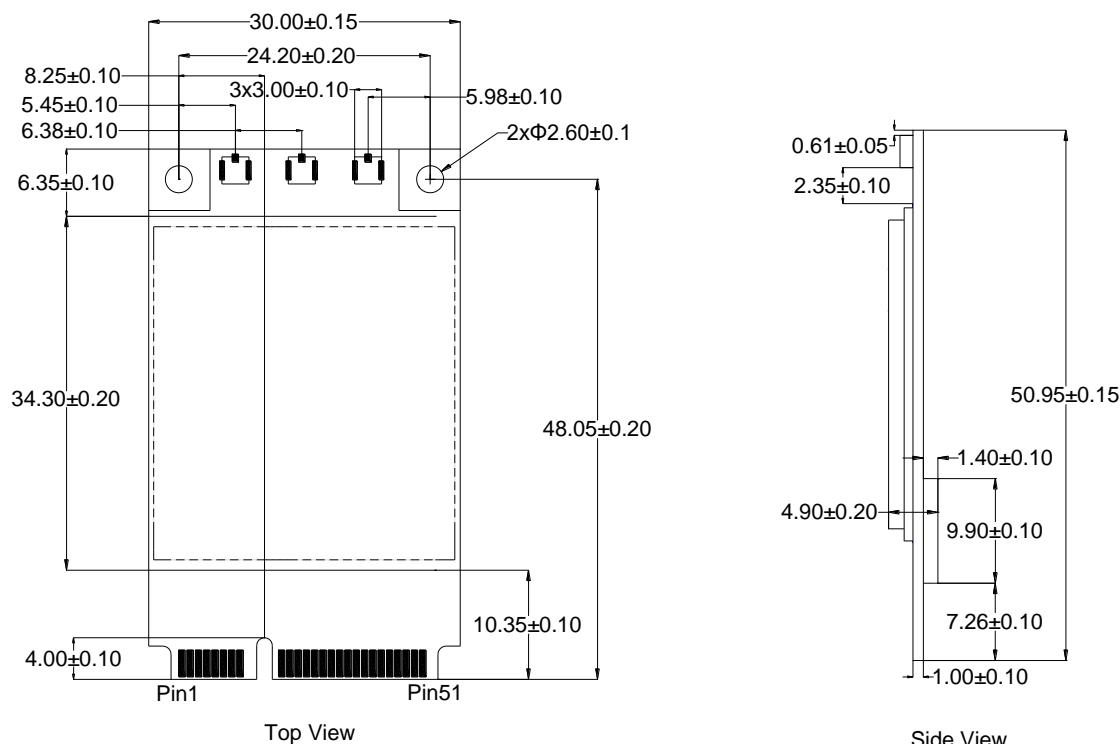

Figure 18: Mechanical Dimensions of EC25 Mini PCIe

7.3. Standard Dimensions of Mini PCI Express

The following figure shows the standard dimensions of Mini PCI Express. Please refer to [document \[1\]](#) for Detail A and Detail B.

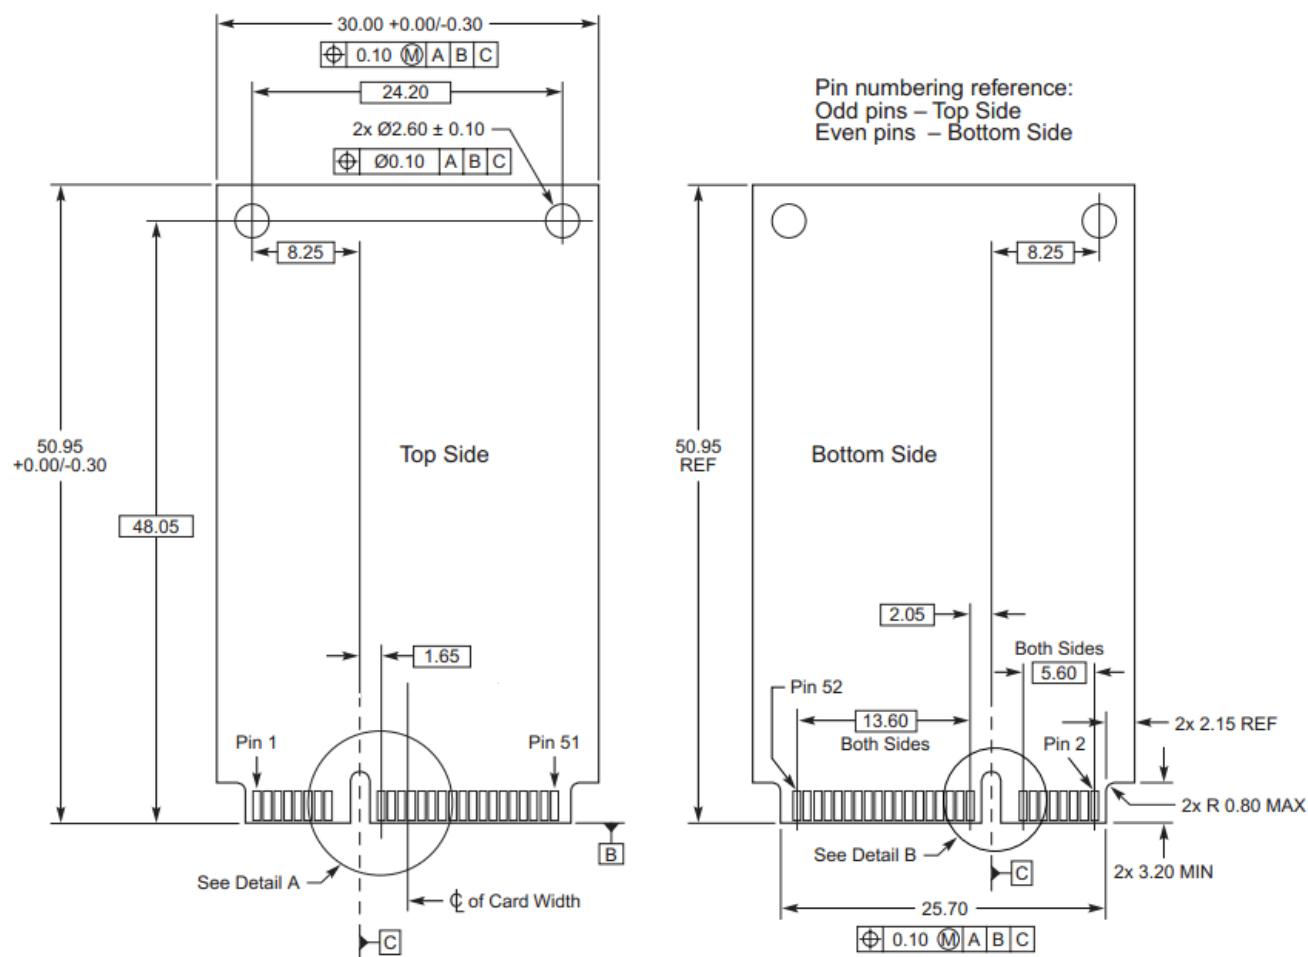

Figure 19: Standard Dimensions of Mini PCI Express

EC25 Mini PCIe adopts a standard Mini PCI Express connector which complies with the directives and standards listed in the **document [1]**. The following figure takes the Molex 679105700 as an example.

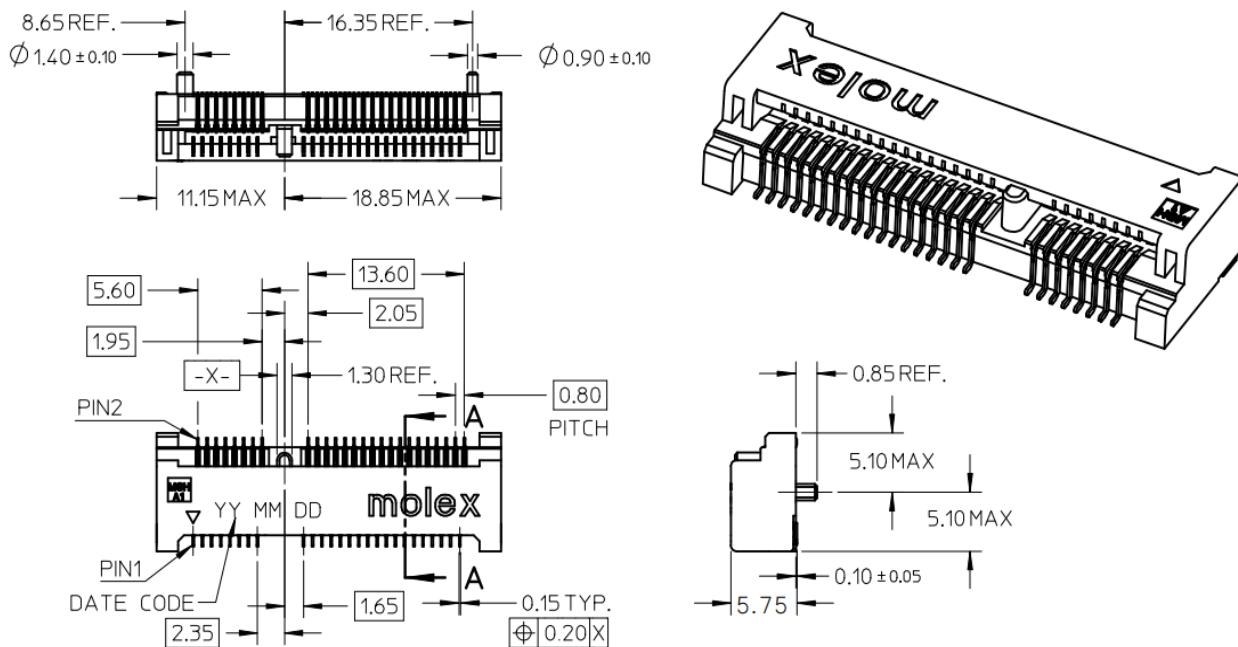

Figure 20: Dimensions of the Mini PCIe Connector (Molex 679105700)

7.4. Packaging Specifications

EC25 Mini PCIe modules are packaged in a tray. Each tray contains 10 modules. The smallest package of EC25 Mini PCIe contains 100 modules.
