**XN3-Quantum-1036**  
**Statement of Maximum Peak Output Power and Calibration Procedure**

This document states the maximum transmit power will be as reported in test report number 3183595MPK-001A, 25.7dBm for 5MHz channels and 25.3dBm for 10MHz channels. This maximum output power is controlled through a factory calibration procedure on the top level base station units. The factory calibration measures output power and creates a software file that controls the output power range. The maximum power allowed to be set by the end user is controlled by this file and will not exceed the values stated above.

Mark Mendonca  
Director RF Engineering  
PureWave Networks
