## RF EXPOSURE CALCULATIONS

## Requirement:

According to USA CFR $15 \S 1.1307$ (b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to radio frequency energy level in excess of the Commission's guidelines. For Canada, RSS-102 sets out the requirements and measurement techniques used to evaluate radio frequency (RF) exposure compliance of radiocommunication apparatus designed to be used within the vicinity of the human body.

Maximum Permissible Exposure Calculations:

[^0]
## Summary:

The EUT with all transmitters is compliant with both the FCC power density limit and the ISED Exposure Evaluation limits.

[^0]:    **EIRP, as computed from Modular Device RF Exposure Exhibits.
    *** For FCC MPE, use of 300 kHz limit at 125 kHz as previously allowed by FCC
    ${ }^{* * * * *} \operatorname{EIRP}(\mathrm{~mW})=\mathrm{S}\left(\mathrm{mW} / \mathrm{cm}^{\wedge} 2\right) \times 4 \times$ PI $\times 20 \mathrm{~cm}^{\wedge} 2$
