MPE Ratio of simultaneous operation based on highest power density compared to the **FCC** limits

Device FCC ID XQC-GDZW7
Date November 23, 2021
Prepared By Kyle F.

e.i.r.p			
14.568	0.009	Ratio 1	912 MHz / 920 MHz
-0.85	0.001	Ratio 2	345 MHz

0.01 Total Ratio Must be <=1

Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneously transmitting antennas incorporated in a host device is ≤ 1.0 , according to calculated/estimated, numerically modeled, or measured field strengths or power density.

447498 D01

0.99 Remaining

Note #1: The 912 MHz / 920 MHz was used for Ratio 1 because that represents the worst case 900 MHz configuration. The 908.42 MHz / 916 MHz is certified under FCC 15.249 and the maximum power allowed would be 94 dBuV/m @ 3 meters (-1.23 dBm EIRP) which would be less than the 912 MHz / 920 MHz combination.

Note #2: The 912 MHz / 920 MHz and 908.42 MHz / 916 MHz do not operate at the same time.
