

Operation description

1. 电源经过降压后，进行整流稳压，给产品供电

After level down voltage for power supply, rectifier and voltage stabilization will be processed, and supply electricity for products.

2. RF 接收到编码和指令信息后进行多级放大处理，并将信息传输到解码 IC 进行识别，当识别到解码信号后，处理指令。进行播放或选曲等功能。

After RF receive encoding and information directive, RF process them by multilevel magnifying and transmit the information into decode IC for identifying. When the decode information is identified, Directive will be processed. Then the function of play and selected song will be applied.

- 3、将声音输出到喇叭！

Please transmit voice into speaker.
