Class 2 Permissive Change Request

We, Domo Tactical Communications (DTC) request a permissive change to the DTC SOLO8 grants.
Description of permissive change:

The current grant of equipment authorization quotes the wrong emissions designator for the bandwidths tested. Documentation incorrectly referenced only the 10 MHz Bandwidths Emissions Designator. The requested change is to update the documentation associated with the testing to reflect the products have been tested to the correct Emissions designator specification.

The products have been tested to the correct emissions designators. Therefore, only the documentation requires a class 2 permissive change to reflect this.

A modification to the authorisation is required to include the correct bandwidth information. These changes have no impact on product performance, nor do they require further testing. The original test data is still valid as the product remains compliant, however, new Part 90 test reports are being supplied to update the Emissions Designator information.

Products affected

SOLO8SDR - C (C-Band)	FCC ID: XRF SOL8SDRC477043
SOLO8-SDR-C 1.98-2.7	FCC ID: XRF SOL8SDRC234091
SOLO8-SDR-P 2x2W	FCC ID: XRF SOL8SDRP234091

Yours sincerely,

Jordan Collings
