1.1 INTRODUCTION

The information contained in this report is intended to show verification of the RF Exposure Assessment of the Domo Tactical Communications Ltd SOL8SDR 2x2W-P-234091 SOFTWARE DEFINED RADIO (SDR-P) PLAIN to the requirements of the applied test specifications.

Objective	To perform RF Exposure Assessment to determine the Equipment Under Test's (EUT's) compliance of the applied rules.
Applicant	Domo Tactical Communications Ltd
Manufacturer	Domo Tactical Communications Ltd
Manufacturing Description	SOFTWARE DEFINED RADIO (SDR-P) PLAIN
Model Number(s)	SOL8SDR 2x2W-P-234091
Test Specification/Issue/Date	CFR 47 Pt 2 Subpart J 2.1091 (Radiofrequency radiation exposure evaluation: mobile devices) CFR 47 Pt 1 Subpart I 1.1310 (Radiofrequency radiation exposure limits)

1.2 REGIONAL REQUIREMENTS

The table below shows the regional requirements that are referenced in this test report. A full list of the requirements is shown in Annex A.

Report Reference	Regional Requirement
FCC	CFR 47 Pt 2 Subpart J 2.1091

1.3 PRODUCT INFORMATION

1.3.1 Technical Description

The Equipment under test was a Domo Tactical Communications Ltd SOL8SDR 2x2W-P-234091 SOFTWARE DEFINED RADIO (SDR-P) PLAIN. A full technical description can be found in the manufacturer's documentation.

All reported calculations were carried out on the relevant information supplied for the SOL8SDR 2x2W-P-234091 SOFTWARE DEFINED RADIO (SDR-P) PLAIN to demonstrate compliance with the applied test specification(s). The sample assessed was found to comply with the requirements of the applied rules.

1.3.2 Supported Features

The following radio access technologies and frequency bands are supported by the equipment under test.

Radio Access Technology	COFDM
	COFDM

Frequency Band	2400
	2400

The unit is capable of transmitting on two antenna ports 2 x 2W. They can be transmitted independently and or at the same time to form a MIMO radio. Hence if used in MIMO mode the unit will transmit from 2 ports at the same time, one port being Horizontally orientated the other Vertically polarised. The two ports are coupled to the two antennas.

1.3.3 Antennas

The following antennas are supported by the equipment under test.

No.	Model	Gain(dB)
1	1	2
2	2	2

1.4 BRIEF SUMMARY OF RESULTS

The wireless device described within this report has been shown to be capable of compliance with the basic restrictions related to human exposure to electromagnetic fields for both General Public and Occupational. The calculations shown in this report were made in accordance with the procedures specified in the applied test specification(s).

Required Compliance Boundary (m)	
Occupational	General Population
0.2	0.2

TEST DETAILS

2.1 RATIONALE FOR ASSESSMENT OF THE RF EXPOSURE

The aim of the assessment report is to evaluate the compliance boundary for a set of given input power(s) according to the basic restrictions (directly or indirectly via compliance with reference levels) related to human exposure to radio frequency electromagnetic fields.
The chosen assessment method to establish the compliance boundary in the far-field region is the reference method as defined in the relevant specifications.

The RF exposure assessment is based upon the following criteria:

The SOL8SDR 2x2W-P-234091 SOFTWARE DEFINED RADIO (SDR-P) PLAIN operates with the following transmitters active on the antenna ports shown in Section 1.3.3. For each transmitter, the Radio Access Technology (RAT), EIRP inclusive of antenna gain and duty cycle, gain of the antenna and lowest frequency of operation are shown as they contribute to the calculation of S Field, E field and H field values according to the following formulas.

The power flux (S Field):

$$S = \frac{PG_{(\theta,\phi)}}{4\pi r^2}$$

The electric field strength (E Field):

$$E = \frac{\sqrt{30PG}_{(\theta,\phi)}}{r}$$

The magnetic field strength (H Field):

$$H = \frac{E}{\eta_o}$$

Where:

S = Power Flux Density (W/m^2) (Note 1 W/m^2 = 0.1 mW/cm^2)
E = Electric Field Strength (V/m)
H = Magnetic Field Strength (A/m)
P = Average Power (W)
G = Antenna Gain (dBi)
r = Distance (cm) or (m)
η_o = 377

2.2 TEST RESULT DETAILS

The frequencies shown in the tables below have been chosen based on the lowest possible frequency that the EUT can transmit.
