

Purpose of Application

This device has been approved under FCC ID: XRH-NPE103 / IC:11922A-NPE103. It was approved as a limited modular approval because the NFC radio transmitter circuit was not shielded. A shield has been added to the NFC radio circuitry and we would like to change the LMA to a full modular approval with a Class II permissive change per FCC Part 2.1043 and RSP-100, Section 10. In addition, the antenna for the NFC radio has been changed. All other circuitry is identical to the way it was when originally certified.

Thank you,

Nic Johnson
