APPLIED STANDARDS AND TEST SUMMARY

1.1 APPLIED STANDARDS

Type of Authorization

Certification for an Industrial Signal Booster.

Applicable FCC Rules

Prepared in accordance with the requirements of FCC Rules and Regulations as listed in 47 CFR Ch.1 Parts 2 and 20, 24, (10/1/16 Edition). The following subparts are applicable to the results in this test report.

Part 2, Subpart J - Equipment Authorization Procedures, Certification

Part 20, Commercial Mobiles Serviced

§ 20.21 Signal Boosters

Part 22, Subpart H - Cellular Radiotelephone Service

§ 22.905 - Channels for cellular service

§ 22.913 - Effective radiated power limits

§ 22.917 – Emission limitations for cellular equipment

The tests were selected and performed with reference to:

- FCC Public Notice 935210 applying "Signal Boosters Basic Certification Requirements" 935210 D02 v04, 2017-10-27.
- FCC Public Notice 935210 applying "Measurement guidance for industrial and nonconsumer signal booster, repeater and amplifier devices" 935210 D05 v01r02, 2017-10-27.
- FCC Public Notice 971168 applying "Measurement guidance for certification of licensed digital transmitters" 971168 D01 v03,2017-10-27
- ANSI C63.26: 2015

Summary Test Results:

The EUT complied with all performed tests as listed in chapter 1.3 Measurement Summary / Signatures.

TEST REPORT REFERENCE: MDE_BVNBG_1803_FCCa_REV1 Page 3 of 25

2 ADMINISTRATIVE DATA

2.1 TESTING LABORATORY

Company Name: 7layers GmbH

Address: Borsigstr. 11

40880 Ratingen

Germany

This facility has been fully described in a report submitted to the ISED and accepted under the registration number: Site# 3699A-1.

The test facility is also accredited by the following accreditation organisation:

Laboratory accreditation no: DAkkS D-PL-12140-01-00

FCC Designation Number: DE0015

FCC Test Firm Registration: 929146

Responsible for accreditation scope: Dipl.-Ing. Marco Kullik

Report Template Version: 2018-01-03

2.2 PROJECT DATA

Responsible for testing and report: Dipl.-Ing. Daniel Gall

Employees who performed the tests: documented internally at 7Layers

Date of Report: 2018-08-30

Testing Period: 2018-06-11 to 2018-06-25

2.3 APPLICANT DATA

Company Name: Commscope

Andrew Wireless Systems GmbH

Address: Industriering 10

86675 Buchdorf

Germany

Contact Person: Mr. Frank Futter

2.4 MANUFACTURER DATA

Company Name: please see applicant data

3 TEST OBJECT DATA

3.1 GENERAL EUT DESCRIPTION

| Kind of Device product description | Cellular Repeater |
|--|---|
| Product name | Cellular Repeater |
| Туре | ION-U System EU L 25T/25T-Vac |
| Declared EUT data by | the supplier |
| General Product Description | The EUT is an industrial signal booster supporting the following: • Band 41 (TD 2500) Broadband Radio Service (BRS): 2496 – 2690 MHz The Remote Units support the following bands: Band 2/25 / 1900 PCS/1900+ Band 4/10/65 (partly) / AWS 1/AWS 1+/ AWS 3 (partly) Band 5 / 850 Band 12 / 700 a Band 13 / 700 c Band 18/26/27 (partly) / 800 Lower/850+/800 SMR (partly) A RF operation is only supported for the downlink. |
| Booster Type | Industrial Signal Booster |
| Voltage Type | AC |
| Voltage Level | 100 V - 240 V, 50 - 60 Hz |
| Maximum Output Donor Port [Uplink] | - |
| Maximum Output Server Port [Downlink] | Band 41: 2496-2690 MHz [Module 2:]: 30.9 dBm Band 41: 2496-2690 MHz [Module 1:]: 31.2 dBm |
| Maximum Gain [Uplink] | - |
| Maximum Gain [Downlink] | Band 41: 2496-2690 MHz [Module 2]: 36.1 dB Band 41: 2496-2690 MHz [Module 1]: 34.3 dB |

The main components of the EUT are listed and described in chapter 3.2 EUT Main components.

3.2 EUT MAIN COMPONENTS

| Sample Name | Sample Code | Description |
|------------------|---------------------|-------------|
| EUT A | DE1277005aa01 | FCC sample |
| Sample Parameter | | Value |
| Serial Number | 779-0001 | |
| HW Version | ID No: 7776915-0002 | |
| SW Version | V1.0.0.25 | |
| Comment | - | |

NOTE: The short description is used to simplify the identification of the EUT in this test report.

3.3 ANCILLARY EQUIPMENT

For the purposes of this test report, ancillary equipment is defined as equipment which is used in conjunction with the EUT to provide operational and control features to the EUT. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But nevertheless Ancillary Equipment can influence the test results.

| Device | Details (Manufacturer, Type Model, S/N, HW, SW) | Description |
|--------|---|---------------|
| ANC1 | FCC-ID: XS5-U7885L17E19P IC ID: 2237E-U78L17E19P Commscope, ION-U L 7/80-85/17EP/19P-Vac, P05, V1.00.01.05 | Remote Unit 1 |
| ANC2 | FCC-ID: XS5-U7885L17E19P IC ID: 2237E-U78L17E19P Commscope, ION-U L 7/80-85/17EP/19P-Vac, P01, V1.00.01.05 | Remote Unit 2 |

3.4 AUXILIARY EQUIPMENT

For the purposes of this test report, auxiliary equipment is defined as equipment which is used temporarily to enable operational and control features especially used for the tests of the EUT which is not used during normal operation or equipment that is used during the tests in combination with the EUT but is not subject of this test report. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But nevertheless Auxiliary Equipment can influence the test results.

| Device | Details (Manufacturer, HW, SW, S/N) | Description |
|--------|--|-------------|
| - | - | - |

3.5 EUT SETUPS

This chapter describes the combination of EUTs and equipment used for testing. The rationale for selecting the EUTs, ancillary and auxiliary equipment and interconnecting cables, is to test a representative configuration meeting the requirements of the referenced standards.

| Setup | Combination of EUTs | Description and Rationale |
|----------|---------------------|---------------------------|
| S01_AA01 | EUT A, ANC1, ANC2, | Setup for all tests |

3.6 OPERATING MODES

This chapter describes the operating modes of the EUTs used for testing.

3.6.1 TEST CHANNELS

| Band | Direction | Lower Frequency Band Edge [MHz] | Upper Frequency Band Edge [MHz] | Center Frequency [MHz] | Port |
|------|-----------|--|--|------------------------------|-------|
| 5 | downlink | 869.00 | 894.00 | 881.50 | Donor |

3.6.2 AUTOMATIC GAIN CONTROL LEVELS

| AGC Levels | | | | | | | |
|------------|-----------|----------------|------------------------------|---|---------------------------------------|--------------------|-----------|
| Band | Direction | Signal Type | AGC Start Pin [dBm] | AGC Start Pin -0.3 dB [dBm] | AGC Start Pin +3 dB [dBm] | Frequency [MHz] | Frequency |
| 5 | downlink | Narrowband | - | - | - | 1962.5 | Mid |
| 5 | downlink | Wideband | - | - | - | 1962.5 | |
| 5 | downlink | Narrowband | - | ı | - | 881.5 | Low |
| 5 | downlink | Wideband | - | 1 | - | 881.5 | |
| 5 | downlink | Narrowband | - | - | - | 893.8 | High |
| 5 | downlink | Wideband | - | - | - | 893.8 | |
| 5 | downlink | Narrowband | - | - | - | - | Max. |
| 5 | downlink | Wideband | - | - | - | - | Power |

Note: Because only the test case "Field strength of spurious radiation" have been performed, the AGC power levels have not been determined.

3.7 PRODUCT LABELLING

3.7.1 FCC ID LABEL

Please refer to the documentation of the applicant.

3.7.2 LOCATION OF THE LABEL ON THE EUT

Please refer to the documentation of the applicant.

TEST REPORT REFERENCE: MDE_BVNBG_1803_FCCa_REV1

4 TEST RESULTS

4.1 FIELD STRENGTH OF SPURIOUS RADIATION

Standard FCC Part 22, §22.917

The test was performed according to:

ANSI C63.26

4.1.1 TEST DESCRIPTION

This test case is intended to demonstrate compliance to the applicable radiated spurious emission measurements per § 2.1053

The EUT was connected to the test setup according to the following diagram:

FCC Part 22/24/27/90; Industrial Signal Booster – Test Setup; Field Strength of Spurious Radiation

The test set-up was made in accordance to the general provisions of ANSI C63.4 in a typical installation configuration. The Equipment Under Test (EUT) was set up on a non-conductive table $1.0 \times 2.0 \text{ m}^2$ in the semi-anechoic chamber. The influence of the EUT support table that is used between 30--1000 MHz was evaluated.

The measurement procedure is implemented into the EMI test software EMC32 from R&S. Exploratory tests are performed at 3 orthogonal axes to determine the worst-case orientation of a body-worn or handheld EUT. The final test on all kind of EUTs is also performed at 3 axes. A pre-check is performed while the EUT is powered from a DC power source.

1. Measurement above 30 MHz and up to 1 GHz

Step 1: Preliminary scan

This is a preliminary test to identify the highest amplitudes relative to the limit. Settings for step 1:

TEST REPORT REFERENCE: MDE_BVNBG_1803_FCCa_REV1

- Antenna distance: 3 m

- Detector: Peak-Maxhold / Quasipeak (FFT-based)

- Frequency range: 30 - 1000 MHz

Frequency steps: 30 kHzIF-Bandwidth: 120 kHz

- Measuring time / Frequency step: 100 ms

- Turntable angle range: -180° to 90°

- Turntable step size: 90°

Height variation range: 1 – 3 m
Height variation step size: 2 m
Polarisation: Horizontal + Vertical

Intention of this step is, to determine the radiated EMI-profile of the EUT. Afterwards the relevant emissions for the final measurement are identified.

Step 2: Adjustment measurement

In this step the accuracy of the turntable azimuth and antenna height will be improved. This is necessary to find out the maximum value of every frequency.

For each frequency, which was determined the turntable azimuth and antenna height will be adjusted. The turntable azimuth will slowly vary by \pm 45° around this value. During this action, the value of emission is continuously measured. The turntable azimuth at the highest emission will be recorded and adjusted. In this position, the antenna height will also slowly vary by \pm 100 cm around the antenna height determined. During this action, the value of emission is also continuously measured. The antenna height of the highest emission will also be recorded and adjusted.

- Detector: Peak - Maxhold

- Measured frequencies: in step 1 determined frequencies

- IF - Bandwidth: 120 kHz - Measuring time: 100 ms

- Turntable angle range: ± 45 ° around the determined value

- Height variation range: ± 100 cm around the determined value

- Antenna Polarisation: max. value determined in step 1

Step 3: Final measurement with QP detector

With the settings determined in step 3, the final measurement will be performed:

EMI receiver settings for step 4:

- Detector: Quasi-Peak (< 1 GHz)

- Measured frequencies: in step 1 determined frequencies

- IF – Bandwidth: 120 kHz

- Measuring time: 1 s

After the measurement a plot will be generated which contains a diagram with the results of the preliminary scan and a chart with the frequencies and values of the results of the final measurement.

3. Measurement above 1 GHz

The following modifications apply to the measurement procedure for the frequency range above 1 GHz:

Step 1:

The Equipment Under Test (EUT) was set up on a non-conductive support (tilt device) at 1.5 m height in the fully-anechoic chamber.

All steps were performed with one height (1.5 m) of the receiving antenna only.

The EUT is turned during the preliminary measurement across the elevation axis, with a step size of 90 °.

The turn table step size (azimuth angle) for the preliminary measurement is 45 °.

Step 2:

Due to the fact, that in this frequency range the test is performed in a fully anechoic room, the height scan of the receiving antenna instep 2 is omitted. Instead of this, a maximum search with a step size \pm 45° for the elevation axis is performed.

The turn table azimuth will slowly vary by \pm 22.5°.

The elevation angle will slowly vary by $\pm 45^{\circ}$

EMI receiver settings (for all steps):

- Detector: Peak, Average

- IF Bandwidth = 1 MHz

Step 3:

Spectrum analyser settings for step 3:

- Detector: Peak / Average

- Measured frequencies: in step 1 determined frequencies

- IF - Bandwidth: 1 MHz - Measuring time: 1 s

4.1.2 TEST REQUIREMENTS / LIMITS

FCC Part 2.1053; Measurement required: Field strength of spurious radiation:

Measurements shall be made to detect spurious emissions that may be radiated directly from the cabinet, control circuits, power leads, or intermediate circuit elements under normal conditions of installation and operation. Curves or equivalent data shall be supplied showing the magnitude of each harmonic and other spurious emission. For this test, single sideband, independent sideband, and controlled carrier transmitters shall be modulated under the conditions specified in paragraph (c) of §2.1049, as appropriate.

Part 22, Subpart H - Cellular Radiotelephone Service

§ 22 917 - Emission limitations for cellular equipment

(a) Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P)$ dB.

RSS-132; 5.5 Transmitter Unwanted Emissions

Mobile and base station equipment shall comply with the limits in (i) and (ii) below.

- 1. In the first 1.0 MHz band immediately outside and adjacent to each of the sub-bands specified in Section 5.1, the power of emissions per any 1% of the occupied bandwidth shall be attenuated (in dB) below the transmitter output power P (dBW) by at least 43 + 10 log₁₀p (watts).
- 2. After the first 1.0 MHz immediately outside and adjacent to each of the sub-bands, the power of emissions in any 100 kHz bandwidth shall be attenuated (in dB) below the transmitter output power P (dBW) by at least 43 + 10 log₁₀ p (watts). If the measurement is performed using 1% of the occupied bandwidth, power integration over 100 kHz is required.

TEST REPORT REFERENCE: MDE_BVNBG_1803_FCCa_REV1

4.1.3 TEST PROTOCOL

| Band 5, downlink; | | | | | | |
|----------------------------|----------------------------|----------------|----------|--------------|----------------|----------------------------|

The calibration interval is the time interval between "Last Calibration" and "Calibration Due"

6 ANTENNA FACTORS, CABLE LOSS AND SAMPLE CALCULATIONS

This chapter contains the antenna factors with their corresponding path loss of the used measurement path for all antennas as well as the insertion loss of the LISN.

6.1 LISN R&S ESH3-Z5 (150 KHZ - 30 MHZ)

| Frequency | Corr. |
|-----------|-------|
| MHz | dB |
| 0.15 | 10.1 |
| 5 | 10.3 |
| 7 | 10.5 |
| 10 | 10.5 |
| 12 | 10.7 |
| 14 | 10.7 |
| 16 | 10.8 |
| 18 | 10.9 |
| 20 | 10.9 |
| 22 | 11.1 |
| 24 | 11.1 |
| 26 | 11.2 |
| 28 | 11.2 |
| 30 | 11.3 |

| | cable |
|-----------|-----------|
| LISN | loss |
| insertion | (incl. 10 |
| loss | dB |
| ESH3- | atten- |
| Z5 | uator) |
| dB | dB |
| 0.1 | 10.0 |
| 0.1 | 10.2 |
| 0.2 | 10.3 |
| 0.2 | 10.3 |
| 0.3 | 10.4 |

| 0.4 | 10.4 |
| 0.4 | 10.5 |
| 0.4 | 10.5 |
| 0.5 | 10.6 |
| 0.5 | 10.6 |
| 0.5 | 10.7 |
| 0.5 | 10.7 |
| 0.5 | 10.8 |
| | |

Sample calculation

 U_{LISN} (dB μ V) = U (dB μ V) + Corr. (dB)

U = Receiver reading

LISN Insertion loss = Voltage Division Factor of LISN

Corr. = sum of single correction factors of used LISN, cables, switch units (if used)

Linear interpolation will be used for frequencies in between the values in the table.

6.2 ANTENNA R&S HFH2-Z2 (9 KHZ - 30 MHZ)

Sample calculation

E (dB μ V/m) = U (dB μ V) + AF (dB 1/m) + Corr. (dB)

U = Receiver reading

AF = Antenna factor

Corr. = sum of single correction factors of used cables, switch unit, distance correction, amplifier (if applicable) distance correction = $-40 * LOG (d_{Limit} / d_{used})$

Linear interpolation will be used for frequencies in between the values in the table.

Table shows an extract of values

Sample calculation

E (dB μ V/m) = U (dB μ V) + AF (dB 1/m) + Corr. (dB)

U = Receiver reading

AF = Antenna factor

Corr. = sum of single correction factors of used cables, switch unit, distance correction, amplifier (if applicable) Linear interpolation will be used for frequencies in between the values in the table.

Table shows an extract of values.

6.6 ANTENNA EMCO 3160-10 (26.5 GHZ - 40 GHZ)

Sample calculation

E (dB μ V/m) = U (dB μ V) + AF (dB 1/m) + Corr. (dB)

U = Receiver reading

AF = Antenna factor

Corr. = sum of single correction factors of used cables, switch unit, distance correction, amplifier (if applicable)

Linear interpolation will be used for frequencies in between the values in the table.

distance correction = -20 * LOG (d_{Limit}/d_{used}) Linear interpolation will be used for frequencies in between the values in the table.

Table shows an extract of values.

7 MEASUREMENT UNCERTAINTIES

| Test Case(s) | Parameter | Uncertainty |
|--|--------------------|------------------------|
| - Field strength of spurious radiation | Power | ± 5.5 dB |
| Out-of-band rejectionOccupied BandwidthInput versus output spectrum | Power Frequency | ± 2.9 dB ± 11.2 kHz |
| Effective radiated power, mean output power and zone enhancer gainPeak to Average Ratio | Power | ± 2.2 dB |
| Out-of-band emission limitsConducted Spurious Emissions at Antenna Terminal | Power Frequency | ± 2.2 dB ± 11.2 kHz |
