Re: Request of Class II Permissive Change

A detailed description of the differences between the modified device and the previously certified device, has been demonstrated in the test report and RF Exposure Predictions submitted with this letter:

- (i) the radio frequency – no change and RF output power – no change
- (ii) the radio frequency circuitry – no change
- (iii) functional capabilities – no change

We request a Class II Permissive Change based on the changed components demonstrating no effect on the RF requirements.

Sincerely,

A handwritten signature in black ink, appearing to read "Dean Barnat", with a stylized flourish extending from the end of the name.

Dean Barnat
