

Operation Description

The 2.4GHz Wireless Audio Transmitter

Plug the 9V-DC powersupply into AC outlet, and set the transmitter to the desired channel. The transmitter will transmit the audio signal wirelessly to the receiver in that range through the 2.4GHz antenna. The audio input is line-in. The modulation is QPSK.

**The frequency response is 2.400GHz – 2.483GHz
Channel is 14CH.**
