

### Add Additional Wireless Network Name (SSID)

To add additional Wireless Network Names simply add the name to the Multiple SSID field and click on apply at the bottom of the page. When finished, go to the Security section in this Users Guide for wireless security configuration.

Wireless Network	
AP Mode Support	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Wireless Mode	2.4GHz 802.11 b/g/n mixed mode ▼
Wireless Name(SSID)	TRENDnet638
Multiple SSID1	WLAN_2
Multiple SSID2	WLAN_3
Multiple SSID3	WLAN_4
Broadcast Network Name (SSID)	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
BSSID	00:11:E0:02:E0:C2
Frequency (Channel)	AutoSelect ▼

Multiple SSIDs

### Broadcast Network Name (SSID)

This option allows you to hide your wireless network. When this option is set to enable, your wireless network name is broadcast to anyone within the range of your signal. If you're not using encryption then they could connect to your network. When this mode is disabled, you must enter the Wireless Network Name (SSID) on the client manually to connect to the network.

### Frequency (Channel)

A wireless network uses specific channels in the wireless spectrum to handle communication between clients. Some channels in your area may have interference from other electronic devices. Choose the clearest channel to help optimize the performance and coverage of your wireless network.

## WDS Mode

When WDS is enabled, this access point functions as a wireless bridge and is able to wirelessly communicate with other access points via WDS links. A WDS link is bidirectional; both end points must support WDS and each access point must know the MAC Address of the other. Each access point will be configured with the remote access point's MAC address and vice versa. Make sure all access points are configured with the same SSID, channel and wireless encryption settings.

Wireless Distribution System(WDS)	
WDS Mode	Enable ▾
EncrypType	NONE ▾
AP MAC Address	<input type="text"/>
AP MAC Address	<input type="text"/>
AP MAC Address	<input type="text"/>
AP MAC Address	<input type="text"/>

WDS configuration option enabled

## Operating Mode

If you have both wireless g and wireless n client devices included on your wireless network at the same time, you should choose **Mixed Mode**. And if you only have wireless n client devices on your wireless network, you can choose **Green Field** to enjoy high throughput.

## Channel Bandwidth

The "20/40" MHz option is usually best. The other option is available for special circumstances.

## Guard Interval

Using "Auto" option can increase throughput. However, it can also increase error rate in some installations, due to increased sensitivity to radio-frequency reflections. Select the option that works best for your installation.

### MCS

The Modulation and Coding Scheme (MCS) is a value that determines the modulation, coding and number of spatial channels. This parameter represents transmission rate. By default (Auto) the fastest possible transmission rate will be selected. You have the option of selecting the speed if necessary.

Fix MCS rate for HT rate 0-15

### Reserve Direction Grant (RDG)

Disable or enable reserve direction grant. Default is enabled.

### Extension Channel

When 20/40 channel bandwidth has been chosen, you should select extension channel to get higher throughput.

HT Physical Mode	
Operating Mode	<input checked="" type="radio"/> Mixed Mode <input type="radio"/> Green Field
Channel BandWidth	<input checked="" type="radio"/> 20 <input type="radio"/> 20/40
Guard Interval	<input type="radio"/> long <input checked="" type="radio"/> Auto
MCS	Auto
Reverse Direction Grant (RDG)	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
Extension Channel	2457MHz (Channel 10)

## Wireless Advanced

The screenshot shows the configuration interface for a TRENDnet 300Mbps Wireless N PoE Access Point (TEW-638PAP). The page is titled "Advanced Wireless Settings" and includes a sidebar with navigation options: Operation, Network, Wireless (with sub-options: Basic, Advanced, MAC Filter, Security, WPS, Station List), and Administrator. The main content area contains the following settings:

Advanced Wireless	
Beacon Interval	100 ms (range 20 - 1000, default 100)
Data Beacon Rate (DTIM)	1 ms (range 1 - 255, default 1)
Fragment Threshold	2346 (range 256 - 2346, default 2346)
RTS Threshold	2347 (range 1 - 2347, default 2347)
Short Preamble	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Short Slot	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Tx Burst	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Pkt_Aggregate	<input checked="" type="radio"/> Enable <input type="radio"/> Disable

Wi-Fi Multimedia	
WMM Capable	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
APSD Capable	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

Buttons: Apply, Cancel

Copyright © 2008 TRENDnet. All Rights Reserved.

### Beacon Interval

Beacons are packets sent by a wireless Access Point to synchronize wireless devices. Specify a Beacon Period value between 20 and 1000. The default value is set to 100 milliseconds.

### Data Beacon Rate (DTIM)

A DTIM is a countdown informing clients of the next window for listening to broadcast and multicast messages. When the wireless Access Point has buffered broadcast or multicast messages for associated clients, it sends the next DTIM with a DTIM Interval value. Wireless clients detect the beacons and awaken to receive the broadcast and multicast messages. The default value is 1. Valid settings are between 1 and 255.

### Fragment Threshold

This setting should remain at its default value of 2346. Setting the Fragmentation value too low may result in poor performance.

### RTS Threshold

This setting should remain at its default value of 2347. If you encounter inconsistent data flow, only minor modifications to the value are recommended.

### **Short Preamble**

Use to synchronize communication timing between devices on a network. Disable by default.

### **Short Slot**

Enable or disable short slot. Default is enabled.

### **Tx Burst**

Enable or disable Tx burst. Default is enabled.

### **Pkt\_Aggregate**

Enable or disable Pkt aggregate. Default is enabled.

## **Wi-Fi Multimedia**

### **WMM Capable**

Enabling WMM can help control latency and jitter when transmitting multimedia content over a wireless connection.

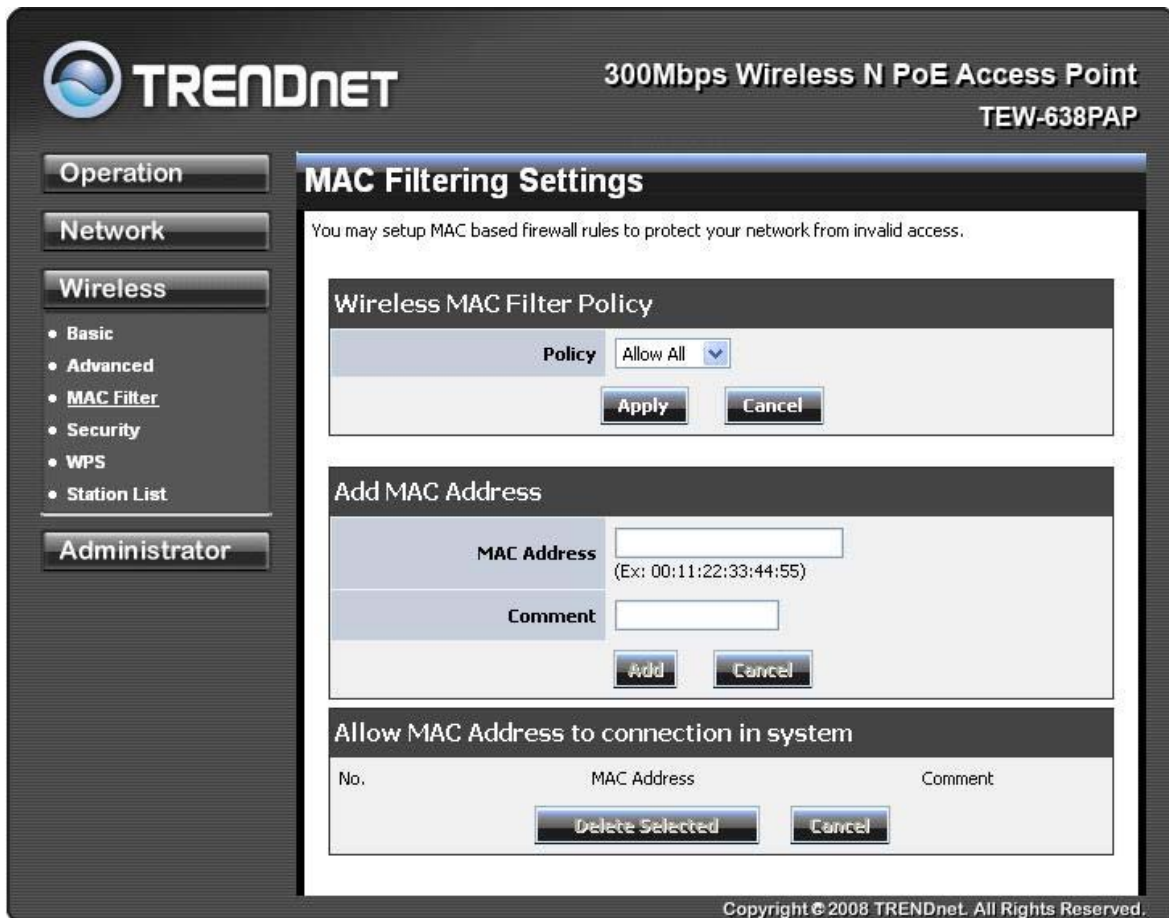

### **APSD Capable**

Enable or disable APSD (Adaptive power scheduling protocol) capable. Default is enabled.

\*Maximum wireless signal rates are referenced from IEEE 802.11 theoretical specifications. Actual data throughput and coverage will vary depending on interference, network traffic, building materials and other conditions

## Wireless MAC Filter

The MAC address filter section can be used to filter network access by machines based on the unique MAC addresses of their network adapter(s). It is most useful to prevent unauthorized wireless devices from connecting to your network. A MAC address is a unique ID assigned by the manufacturer of the network adapter.

**TRENDNET** 300Mbps Wireless N PoE Access Point  
TEW-638PAP

**MAC Filtering Settings**

You may setup MAC based firewall rules to protect your network from invalid access.

**Wireless MAC Filter Policy**

Policy: Allow All

### Policy

Three policies can be selected - Disable, Allow All & Reject All.

### MAC Address

Add MAC Address to follow Policy setting

## Wireless Security

The screenshot shows the configuration interface for a TRENDnet 300Mbps Wireless N PoE Access Point (TEW-638PAP). The page is titled "Wireless Security Setting" and includes a sidebar with navigation options: Operation, Network, Wireless, and Administrator. The "Wireless" section is expanded, showing sub-options: Basic, Advanced, MAC Filter, Security (selected), WPS, and Station List. The main content area displays the following settings:

- Select SSID:** SSID choice is set to "TRENDnet638".
- Security Mode -- "TRENDnet638":** Security Mode is set to "WEP-OPEN".
- Wire Equivalence Protection (WEP):** Default Key is set to "Key 1". There are four input fields for WEP Key 1, 2, 3, and 4, each with a "Hex" dropdown menu.

At the bottom of the form are "Apply" and "Cancel" buttons. The footer of the page reads "Copyright © 2008 TRENDnet. All Rights Reserved."

### SSID choice

Choose the SSID which need to implement security.

### Security Mode

You can disable security mode, or you can choose following modes to enable security – Disable, WEP-OPEN, WEP-SHARED, WEP-AUTO, WPA, WPA-PSK, WPA2, WPA2-PSK, WPA-PSK/WPA2-PSK, WPA/WPA2

## Wireless WPS

You can setup security easily by choosing PIN or PBC method to do Wi-Fi Protected Setup.

The screenshot displays the configuration interface for a TRENDnet 300Mbps Wireless N PoE Access Point (TEW-638PAP). The main heading is "Wi-Fi Protected Setup". Below the heading, a message states: "You could setup security easily by choosing PIN or PBC method to do Wi-Fi Protected Setup."

The interface is divided into several sections:

- WPS Config:** A section where the "WPS" status is set to "Enable" via a dropdown menu. An "Apply" button is located below this section.
- WPS Summary:** A table displaying the current WPS configuration:

WPS Current Status	Idle
WPS Configured	No
WPS SSID	TRENDnet638
WPS Auth Mode	Open
WPS Encryp Type	None
WPS Default Key Index	1
WPS Key(ASCII)	
AP PIN	0

A "Reset OOB" button is located below the table.
- WPS Progress:** A section for selecting the WPS mode. The "WPS mode" is set to "PIN" (indicated by a selected radio button). There is also an option for "PBC". A "Client PIN" input field is present, and an "Apply" button is located below.
- WPS Status:** A section showing the current WPS status as "WSC:Idle".

At the bottom of the page, the copyright notice reads: "Copyright © 2008 TRENDnet. All Rights Reserved."

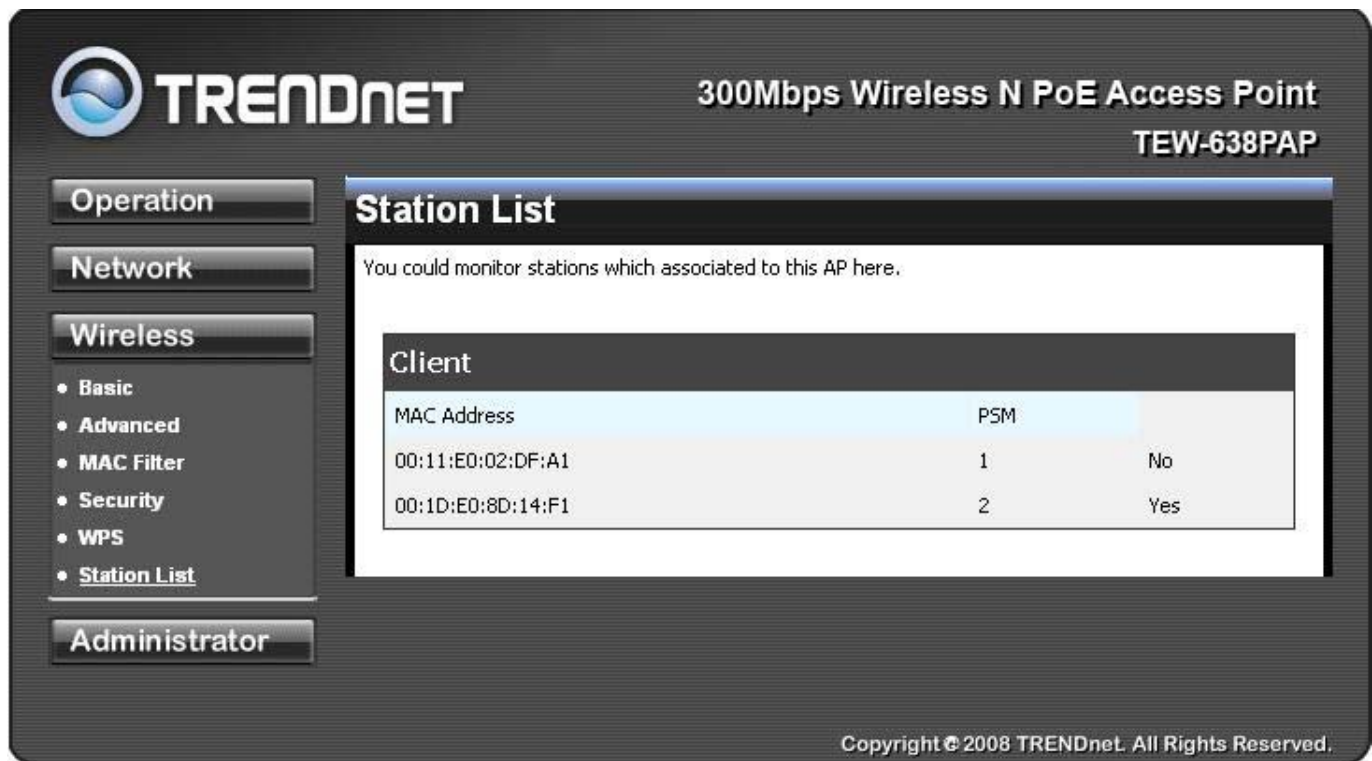

### WPS mode

Two WPS modes can be selected – PIN & PBC. If PIN is selected, you should enter PIN code of your wireless client device to get wireless connection with this AP.

## Wireless Station List

You can monitor stations which associated to this AP.

**TRENDnet** 300Mbps Wireless N PoE Access Point  
TEW-638PAP

**Station List**

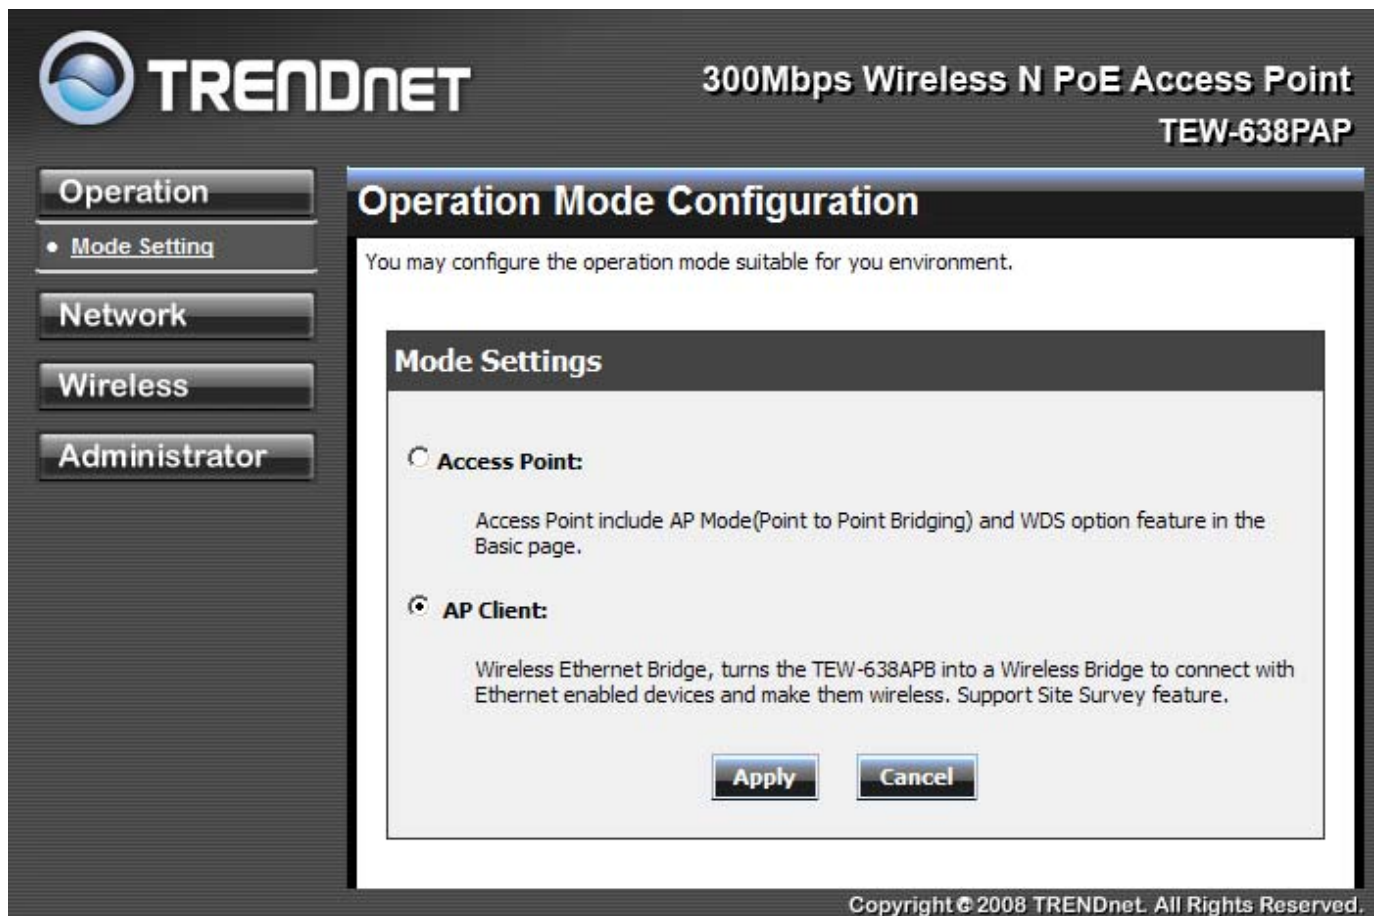

You could monitor stations which associated to this AP here.

Client		
MAC Address	PSM	
00:11:E0:02:DF:A1	1	No
00:1D:E0:8D:14:F1	2	Yes

Copyright © 2008 TRENDnet. All Rights Reserved.

## WIRELESS BASIC – AP CLIENT

Select the **AP Client** option to use the TEW-638PAP as a wireless network adapter. Use this feature to connect other Ethernet devices and allow them to become wirelessly enabled. Select the option **AP Client** and **apply** the setting at the bottom of the window.

AP Client allows Ethernet enabled devices to become wirelessly enabled.

## Wireless settings

View the current Link Status of the TEW-638PAP in AP Client mode.

The screenshot shows the TRENDnet web interface for a 300Mbps Wireless N PoE Access Point (TEW-638PAP). The left sidebar contains navigation tabs for Operation, Network, and Wireless. Under the Wireless tab, there is a list of options: Profile, Link Status (selected), Site Survey, Statistics, Advance, QoS, and WPS. The main content area is titled "Station Link Status" and contains a table with the following data:

Link Status	Value
Status	CAMTEST <--> 00-C0-02-D4-B0-E2
Extra Info	Link is Up
Channel	10 <--> 2457000 KHz ; Central Channel: 10
Link Quality	Good 78%
Signal Strength	Normal 50% <input type="checkbox"/> dBm format
Noise Level	Low 43%

Copyright © 2008 TRENDnet. All Rights Reserved.

## Profile

Create a custom connection to a specific wireless network. Use this option to make custom profiles and store new profile for later use.

The screenshot shows the TRENDnet web interface for a 300Mbps Wireless N PoE Access Point (TEW-638PAP). The left sidebar contains navigation tabs for Operation, Network, and Wireless. Under the Wireless tab, there is a list of options: Profile (selected), Link Status, Site Survey, Statistics, Advance, QoS, and WPS. The main content area is titled "Station Profile" and contains a table with the following data:

Profile	SSID	Channel	Authentication	Encryption	Network Type
<input type="button" value="Add"/> <input type="button" value="Delete"/> <input type="button" value="Edit"/> <input type="button" value="Activate"/>					

Copyright © 2008 TRENDnet. All Rights Reserved.

Configure the setting to connect to a wireless network, selection option for network type, SSID, and wireless security. The profile can be edited, deleted and made active from this option.

System Configuration	
Profile Name	PROF001
SSID	
Network Type	Infrastructure
Power Saving Mode	<input checked="" type="radio"/> CAM (Constantly Awake Mode) <input type="radio"/> Power Saving Mode
RTS Threshold	<input type="checkbox"/> Used <input type="text" value="2347"/> (range 1 - 2347)
Fragmentation Threshold	<input type="checkbox"/> Used <input type="text" value="2346"/> (range 256 - 2346)

Security Policy	
Security Mode	OPEN

Wire Equivalence Protection (WEP)	
WEP Key Length	64 bit (10 hex digits / 5 ascii keys)
WEP Key Entry Method	Hexadecimal
WEP Key 1 :	<input type="text"/>
WEP Key 2 :	<input type="text"/>
WEP Key 3 :	<input type="text"/>
WEP Key 4 :	<input type="text"/>
Default Key	Key 1

## Site Survey

Use the **Site Survey** tool to search for wireless networks in the TEW-638PAP area. Click on the **Scan** button to search for wireless networks to join. From this window, you can also add your profile to use with the TEW-638PAP. Click on the **Connect** button to join a wireless network from this site survey window.

## Advance Setting

Use this setting to adjust the wireless environment.

The screenshot displays the 'Station Advanced Configurations' page for a TrendNet 300Mbps Wireless N PoE Access Point (TEW-638PAP). The page is organized into three main configuration sections:

- Advance Configuration:** Includes 'Wireless Mode(Infra)' set to '2.4GHz 802.11 b/g/n mixed mode' and 'Tx Rate' set to 'Auto'.
- HT Physical Mode:** Includes 'HT Mode' with 'Mixed Mode' selected, 'Channel BandWidth' set to '20', 'Guard Interval' set to 'Auto', and 'MCS' set to 'AUTO'.
- 11n Configuration:** Includes 'MPDU Aggregation' checked and 'enable'.

At the bottom of the configuration area, there are 'Apply' and 'RADIO OFF' buttons. A sidebar on the left contains navigation options: Operation, Network, Wireless (with sub-options: Profile, Link Status, Site Survey, Statistics, Advance, QoS, WPS), and Administrator.

In **Advance Configuration**, select the **Wireless Mode** for the TEW-638PAP to match the speed of the Access Point or wireless Router that will be connecting with. Select the following from the drop down list.

**802.11b/g mixed mode (2.4GHz)** - This wireless mode works in the 2.4GHz frequency range and will allow both wireless b and wireless g client to connect and access the TEW-638PAP at 11Mbps for wireless b, at 54Mbps for wireless g and share access at the same time. Although the wireless b/g operates in the 2.4GHz frequency, it will allow the use of other 2.4GHz client devices (Wireless n/g @ 54Mbps) to connect and access at the same time.

**802.11n only (2.4GHz)** - This wireless mode works in the 2.4GHz frequency range and will only allow the use of wireless n client devices to connect and access the TEW-638PAP up to 300Mbps\*. Although the wireless n operates in the 2.4GHz frequency, this mode will only permit wireless n client devices to work and will exclude any other wireless mode and devices that are not wireless n only.

**802.11b/g/n mixed mode (2.4GHz)** - This wireless mode works in the 2.4GHz frequency range and will only allow the use of wireless g client devices to connect and access the TEW-638PAP at 11Mbps for wireless b, 54Mbps for wireless g and up to 300Mbps\* for wireless n and share access at the same time. Although the wireless b/g/n operates in the same 2.4GHz frequency, it will allow the use of other 2.4GHz client devices (Wireless b/g/n) to connect and access at the same time.

**TX Rate** option is only available with 802.11 b/g mixed and 802.11 b/g/n modes, wireless n does not use this setting. Select the throughput transmission from the drop down list

(1Mbps~54Mbps).

**HT Physical Mode** is used to configure the wireless n settings.

**Mixed Mode** If you have both wireless g and wireless n client devices included on your wireless network at the same time, you should choose.

**Green Field** if you only have wireless n client devices on your wireless network, you can choose to enjoy high throughput.

#### **Channel Bandwidth**

The "20/40" MHz option is usually best. The other option is available for special circumstances.

#### **Guard Interval**

Using "Auto" option can increase throughput. However, it can also increase error rate in some installations, due to increased sensitivity to radio-frequency reflections. Select the option that works best for your installation.

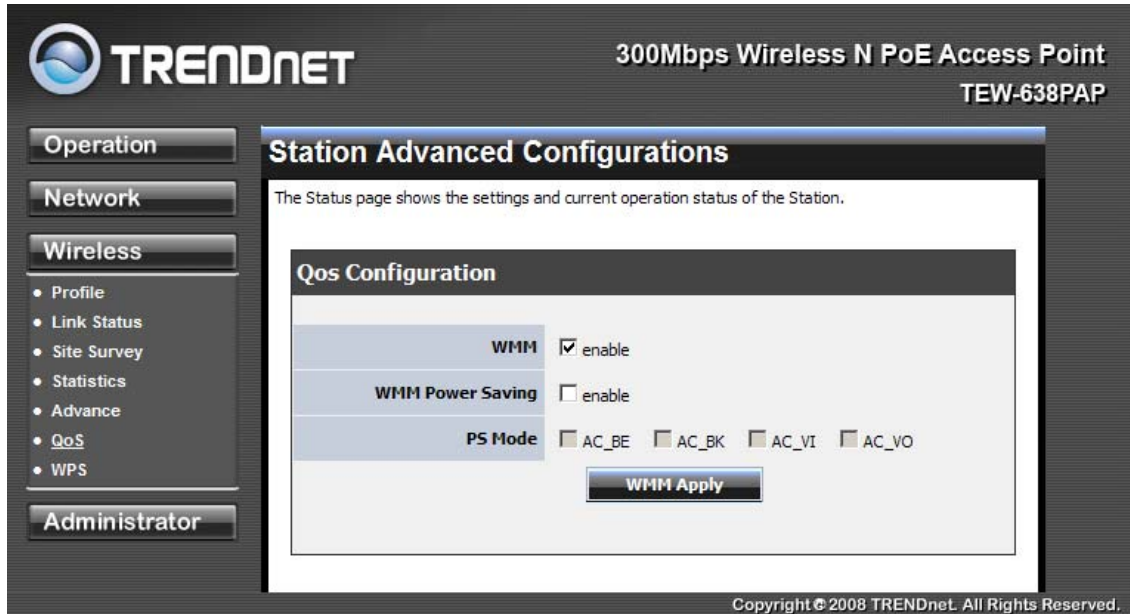

#### **MCS**

The Modulation and Coding Scheme (MCS) is a value that determines the modulation, coding and number of spatial channels. This parameter represents transmission rate. By default (Auto) the fastest possible transmission rate will be selected. You have the option of selecting the speed if necessary.

**11n Configuration** is an aggregation process of packing multiple together to reduce the overheads and average them over multiple frames, thus increasing the data rate.

## QoS

Use this setting to give the TEW-638PAP priority over other wireless networking devices.

**WMM (Wireless Multi-Media)** use this feature allows wireless devices to take advantage of the wireless environment over other wireless devices.

**WMM Power Saving** is an option that allows wireless clients such as notebooks or Laptops to save battery life by sending less transmission during idle times. Add a check mark to enable this option.

**PS Mode** is used for specific application when using WMM Power Saving mode is enabled, use this feature to help with Quality of Service (QoS) settings; these settings are polled by the priority given to the option in this section.

*AC\_BE=Best Effort*  
*AC\_BK=Background*  
*AC\_VI=Video*  
*AC\_VO=Voice*

# WPS

You can setup security easily by choosing PIN or PBC method to do Wi-Fi Protected Setup.

**Wi-Fi Protected Setup (STA)**

You could setup security easily by choosing PIN or PBC method to do Wi-Fi Protected Setup.

**WPS AP site survey**

No.	SSID	BSSID	RSSI	Ch.	Auth.	Encrypt	Ver.	Status
1	TEW672GR	0011E002E0BE	86%	6	Unknown	WEP	1.0	Conf.

**WPS Connection**

UUID: 2880288028801880a8800011e002e0be  
RF Band: 2.4G/5G

Refresh Mode: Enrollee Client PIN: 01886689 PIN Start  
PBC Start Cancel  
Renew PIN

**WPS Status**

Two WPS modes can be selected – PIN & PBC. If PIN is selected, you should enter PIN code of your wireless client device to get wireless connection with this AP.

# ADMINISTRATOR

This Administrator section is used to set password for access to the Web-based management, also provide function of firmware upgrade.

The Administrator tab provides the following configuration options: Management, Upload Firmware, settings, Management and Status.

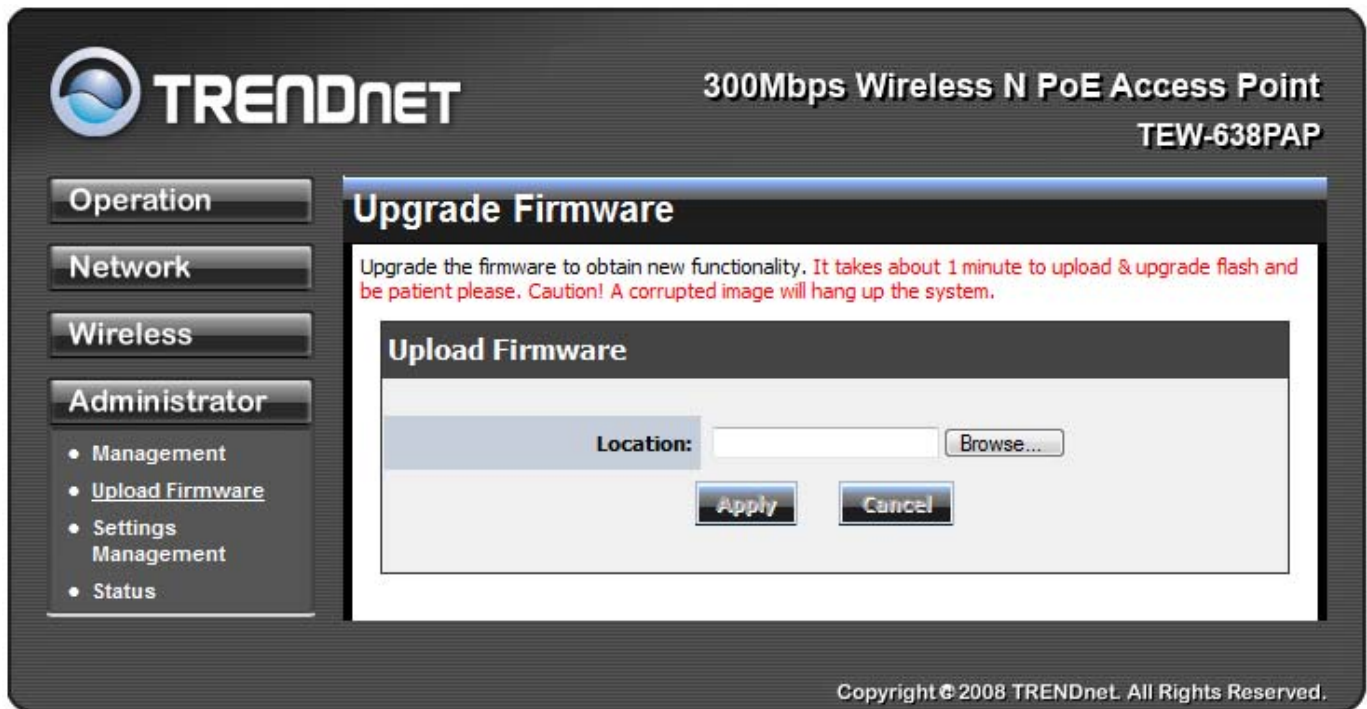

## System Management

At this page, you can configure administrator account and password.

## Upload Firmware

By assigning firmware location, you can upload firmware at this page.

The screenshot shows the Trendnet web interface for a 300Mbps Wireless N PoE Access Point (TEW-638PAP). The interface is dark-themed with a sidebar on the left containing navigation menus: Operation, Network, Wireless, and Administrator. The Administrator menu is expanded, showing options like Management, Upload Firmware, Settings Management, and Status. The main content area is titled "Upgrade Firmware" and contains a warning message: "Upgrade the firmware to obtain new functionality. It takes about 1 minute to upload & upgrade flash and be patient please. Caution! A corrupted image will hang up the system." Below the warning is a form titled "Upload Firmware" with a "Location:" label, a text input field, a "Browse..." button, and "Apply" and "Cancel" buttons. The footer of the interface reads "Copyright © 2008 TRENDnet. All Rights Reserved."

## Settings Management

You can save system settings by exporting them to a configuration file, restore them by importing the file, or reset them to factory default.

**TRENDnet** 300Mbps Wireless N PoE Access Point

# Glossary

## A

### **Access Control List**

ACL. This is a database of network devices that are allowed to access resources on the network.

### **Access Point**

AP. Device that allows wireless clients to connect to it and access the network

### **Ad-hoc network**

Peer-to-Peer network between wireless clients

### **Address Resolution Protocol**

ARP. Used to map MAC addresses to IP addresses so that conversions can be made in both directions.

### **Advanced Encryption Standard**

AES. Government encryption standard

### **Alphanumeric**

Characters A-Z and 0-9

### **Antenna**

Used to transmit and receive RF signals.

### **ASCII**

American Standard Code for Information Interchange. This system of characters is most commonly used for text files

### **Attenuation**

The loss in strength of digital and analog signals. The loss is greater when the signal is being transmitted over long distances.

### **Authentication**

To provide credentials, like a Password, in order to verify that the person or device is really who they are claiming to be

### **Automatic Private IP Addressing**

APIPA. An IP address that that a Windows computer will assign itself when it is configured to obtain an IP address automatically but no DHCP server is available on the network

## B

### **Backward Compatible**

The ability for new devices to communicate and interact with older legacy devices to guarantee interoperability

### **Bandwidth**

The maximum amount of bytes or bits per second that can be transmitted to and from a network device

### **Beacon**

A data frame by which one of the stations in a Wi-Fi network periodically broadcasts network control data to other wireless stations.

### **Bit rate**

The amount of bits that pass in given amount of time

### **Bit/sec**

Bits per second

### **BOOTP**

Bootstrap Protocol. Allows for computers to be booted up and given an IP address with no user intervention

### **Broadcast**

Transmitting data in all directions at once

### **Browser**

A program that allows you to access resources on the web and provides them to you graphically

## **C**

### **CAT 5**

Category 5. Used for 10/100 Mbps or 1Gbps Ethernet connections

### **Client**

A program or user that requests data from a server

### **Collision**

When do two devices on the same Ethernet network try and transmit data at the exact same time.

### **Cookie**

Information that is stored on the hard drive of your computer that holds your preferences to the site that gave your computer the cookie

## **D**

### **Data**

Information that has been translated into binary so that it can be processed or moved to another device

### **Data-Link layer**

The second layer of the OSI model. Controls the movement of data on the physical link of a network

### **dBd**

Decibels related to dipole antenna

### **dBi**

Decibels relative to isotropic radiator

### **dBm**

Decibels relative to one milliwatt

### **Decrypt**

To unscramble an encrypted message back into plain text

### **Default**

A predetermined value or setting that is used by a program when no user input has been entered for this value or setting

### **DHCP**

Dynamic Host Configuration Protocol: Used to automatically assign IP addresses from a predefined pool of addresses to computers or devices that request them

### **Digital certificate:**

An electronic method of providing credentials to a server in order to have access to it or a network

Direct Sequence Spread Spectrum

DSSS: Modulation technique used by 802.11b wireless devices

### **DNS**

Domain Name System: Translates Domain Names to IP addresses

### **Domain name**

A name that is associated with an IP address

### **Download**

To send a request from one computer to another and have the file transmitted back to the requesting computer

### **Duplex**

Sending and Receiving data transmissions at the same time

### **Dynamic IP address**

IP address that is assigned by a DHCP server and that may change. Cable Internet providers usually use this method to assign IP addresses to their customers.

## **E**

### **EAP**

Extensible Authentication Protocol

### **Encryption**

Converting data into cyphertext so that it cannot be easily read

### **Ethernet**

The most widely used technology for Local Area Networks.

## **F**

### **File server**

A computer on a network that stores data so that the other computers on the network can all access it

### **File sharing**

Allowing data from computers on a network to be accessed by other computers on the network with different levels of access rights

### **Firewall**

A device that protects resources of the Local Area Network from unauthorized users outside of the local network

### **Firmware**

Programming that is inserted into a hardware device that tells it how to function

### **Fragmentation**

Breaking up data into smaller pieces to make it easier to store

### **FTP**

File Transfer Protocol. Easiest way to transfer files between computers on the Internet

### **Full-duplex**

Sending and Receiving data at the same time

## **G**

### **Gain**

The amount an amplifier boosts the wireless signal

### **Gateway**

A device that connects your network to another, like the internet

### **Gbps**

Gigabits per second

### **Gigabit Ethernet**

Transmission technology that provides a data rate of 1 billion bits per second

### **GUI**

Graphical user interface

## **H**

### **Half-duplex**

Data cannot be transmitted and received at the same time

### **Hashing**

Transforming a string of characters into a shorter string with a predefined length

### **Hexadecimal**

Characters 0-9 and A-F

### **Hop**

The action of data packets being transmitted from one AP to another

**Host**

Computer on a network

**HTTP**

Hypertext Transfer Protocol is used to transfer files from HTTP servers (web servers) to HTTP clients (web browsers)

**HTTPS**

HTTP over SSL is used to encrypt and decrypt HTTP transmissions

**Hub**

A networking device that connects multiple devices together

**I****ICMP**

Internet Control Message Protocol

**IEEE**

Institute of Electrical and Electronics Engineers

**IGMP**

Internet Group Management Protocol is used to make sure that computers can report their multicast group membership to adjacent APs

**IIS**

Internet Information Server is a WEB server and FTP server provided by Microsoft

**Infrastructure**

In terms of a wireless network, this is when wireless clients use an Access Point to gain access to the network

**Internet**

A system of worldwide networks which use TCP/IP to allow for resources to be accessed from computers around the world

**Internet Explorer**

A World Wide Web browser created and provided by Microsoft

**Internet Protocol**

The method of transferring data from one computer to another on the Internet

**Internet Protocol Security**

IPsec provides security at the packet processing layer of network communication

**Internet Service Provider**

An ISP provides access to the Internet to individuals or companies

**Intranet**

A private network

**Intrusion Detection**

A type of security that scans a network to detect attacks coming from inside and outside of the network

**IP**

Internet Protocol

**IP address**

A 32-bit number, when talking about Internet Protocol Version 4, that identifies each computer that transmits data on the Internet or on an Intranet

**IPsec**

Internet Protocol Security

**IPX**

Internetwork Packet Exchange is a networking protocol developed by Novell to enable their Netware clients and servers to communicate

**ISP**

Internet Service Provider

## **J**

### **Java**

A programming language used to create programs and applets for web pages

## **K**

### **Kbps**

Kilobits per second

### **Kbyte**

Kilobyte

## **L**

### **LAN**

Local Area Network

### **Latency**

The amount of time that it takes a packet to get from the one point to another on a network. Also referred to as delay

### **LED**

Light Emitting Diode

### **Legacy**

Older devices or technology

### **Local Area Network**

A group of computers in a building that usually access files from a server

### **LPR/LPD**

"Line Printer Requestor"/"Line Printer Daemon". A TCP/IP protocol for transmitting streams of printer data.

### **L2TP**

Layer 2 Tunneling Protocol

## **M**

### **MAC address**

A unique hardware ID assigned to every Ethernet adapter by the manufacturer.

### **Mbps**

Megabits per second

### **MDI**

Medium Dependent Interface is an Ethernet port for a connection to a straight-through cable

### **MDIX**

Medium Dependent Interface Crossover, is an Ethernet port for a connection to a crossover cable

### **MIB**

Management Information Base is a set of objects that can be managed by using SNMP

### **Modem**

A device that Modulates digital signals from a computer to an analog signal in order to transmit the signal over phone lines. It also Demodulates the analog signals coming from the phone lines to digital signals for your computer

### **MPPE**

Microsoft Point-to-Point Encryption is used to secure data transmissions over PPTP connections

## **MTU**

Maximum Transmission Unit is the largest packet that can be transmitted on a packet-based network like the Internet

## **Multicast**

Sending data from one device to many devices on a network

## **N**

### **NAT**

Network Address Translation allows many private IP addresses to connect to the Internet, or another network, through one IP address

### **NetBEUI**

NetBIOS Extended User Interface is a Local Area Network communication protocol. This is an updated version of NetBIOS

### **NetBIOS**

Network Basic Input/Output System

### **Netmask**

Determines what portion of an IP address designates the Network and which part designates the Host

### **Network Interface Card**

A card installed in a computer or built onto the motherboard that allows the computer to connect to a network

### **Network Layer**

The third layer of the OSI model which handles the routing of traffic on a network

### **Network Time Protocol**

Used to synchronize the time of all the computers in a network

### **NIC**

Network Interface Card

### **NTP**

Network Time Protocol

## **O**

### **OFDM**

Orthogonal Frequency-Division Multiplexing is the modulation technique for both 802.11a and 802.wireless g

### **OSI**

Open Systems Interconnection is the reference model for how data should travel between two devices on a network

### **OSPF**

Open Shortest Path First is a routing protocol that is used more than RIP in larger scale networks because only changes to the routing table are sent to all the other APs in the network as opposed to sending the entire routing table at a regular interval, which is how RIP functions

## **P**

### **Password**

A sequence of characters that is used to authenticate requests to resources on a network

### **Personal Area Network**

The interconnection of networking devices within a range of 10 meters

### **Physical layer**

The first layer of the OSI model. Provides the hardware means of transmitting electrical signals on a data

carrier

### **Ping**

A utility program that verifies that a given Internet address exists and can receive messages. The utility sends a control packet to the given address and waits for a response.

### **PoE**

Power over Ethernet is the means of transmitting electricity over the unused pairs in a category 5 Ethernet cable

### **Port**

A logical channel endpoint in a network. A computer might have only one physical channel (its Ethernet channel) but can have multiple ports (logical channels) each identified by a number.

### **PPP**

Point-to-Point Protocol is used for two computers to communicate with each over a serial interface, like a phone line

### **PPPoE**

Point-to-Point Protocol over Ethernet is used to connect multiple computers to a remote server over Ethernet

### **PPTP**

Point-to-Point Tunneling Protocol is used for creating VPN tunnels over the Internet between two networks

### **Preamble**

Used to synchronize communication timing between devices on a network

## **Q**

### **QoS**

Quality of Service

## **R**

### **RADIUS**

Remote Authentication Dial-In User Service allows for remote users to dial into a central server and be authenticated in order to access resources on a network

### **Reboot**

To restart a computer and reload its operating software or firmware from nonvolatile storage.

### **Rendezvous**

Apple's version of UPnP, which allows for devices on a network to discover each other and be connected without the need to configure any settings

### **Repeater**

Retransmits the signal of an Access Point in order to extend its coverage

### **RIP**

Routing Information Protocol is used to synchronize the routing table of all the APs on a network

### **RJ-11**

The most commonly used connection method for telephones

### **RJ-45**

The most commonly used connection method for Ethernet

### **RS-232C**

The interface for serial communication between computers and other related devices

### **RSA**

Algorithm used for encryption and authentication

## **S**

### **Server**

A computer on a network that provides services and resources to other computers on the network

### **Session key**

An encryption and decryption key that is generated for every communication session between two computers

### **Session layer**

The fifth layer of the OSI model which coordinates the connection and communication between applications on both ends

### **Simple Mail Transfer Protocol**

Used for sending and receiving email

### **Simple Network Management Protocol**

Governs the management and monitoring of network devices

### **SIP**

Session Initiation Protocol. A standard protocol for initiating a user session that involves multimedia content, such as voice or chat.

### **SMTP**

Simple Mail Transfer Protocol

### **SNMP**

Simple Network Management Protocol

### **SOHO**

Small Office/Home Office

### **SPI**

Stateful Packet Inspection

### **SSH**

Secure Shell is a command line interface that allows for secure connections to remote computers

### **SSID**

Service Set Identifier is a name for a wireless network

### **Stateful inspection**

A feature of a firewall that monitors outgoing and incoming traffic to make sure that only valid responses to outgoing requests are allowed to pass through the firewall

### **Subnet mask**

Determines what portion of an IP address designates the Network and which part designates the Host

### **Syslog**

System Logger -- a distributed logging interface for collecting in one place the logs from different sources. Originally written for UNIX, it is now available for other operating systems, including Windows.

## **T**

### **TCP**

Transmission Control Protocol

### **TCP/IP**

Transmission Control Protocol/Internet Protocol

### **TCP Raw**

A TCP/IP protocol for transmitting streams of printer data.

### **TFTP**

Trivial File Transfer Protocol is a utility used for transferring files that is simpler to use than FTP but with less features

### **Throughput**

The amount of data that can be transferred in a given time period

## **Traceroute**

A utility displays the routes between your computer and specific destination

## **U**

### **UDP**

User Datagram Protocol

### **Unicast**

Communication between a single sender and receiver

### **Universal Plug and Play**

A standard that allows network devices to discover each other and configure themselves to be a part of the network

### **Upgrade**

To install a more recent version of a software or firmware product

### **Upload**

To send a request from one computer to another and have a file transmitted from the requesting computer to the other

### **UPnP**

Universal Plug and Play

### **URL**

Uniform Resource Locator is a unique address for files accessible on the Internet

### **USB**

Universal Serial Bus

### **UTP**

Unshielded Twisted Pair

## **V**

### **Virtual Private Network**

VPN: A secure tunnel over the Internet to connect remote offices or users to their company's network

### **VLAN**

Virtual LAN

### **Voice over IP**

Sending voice information over the Internet as opposed to the PSTN

### **VoIP**

Voice over IP

## **W**

### **Wake on LAN**

Allows you to power up a computer through its Network Interface Card

### **WAN**

Wide Area Network

### **WCN**

Windows Connect Now. A Microsoft method for configuring and bootstrapping wireless networking hardware (access points) and wireless clients, including PCs and other devices.

### **WDS**

Wireless Distribution System. A system that enables the interconnection of access points wirelessly.

### **Web browser**

A utility that allows you to view content and interact with all of the information on the World Wide Web

### **WEP**

Wired Equivalent Privacy is security for wireless networks that is supposed to be comparable to that of a

wired network

**Wi-Fi**

Wireless Fidelity

**Wi-Fi Protected Access**

An updated version of security for wireless networks that provides authentication as well as encryption

**Wide Area Network**

The larger network that your LAN is connected to, which may be the Internet itself, or a regional or corporate network

**Wireless ISP**

A company that provides a broadband Internet connection over a wireless connection

**Wireless LAN**

Connecting to a Local Area Network over one of the 802.11 wireless standards

**WISP**

Wireless Internet Service Provider

**WLAN**

Wireless Local Area Network

**WPA**

Wi-Fi Protected Access. A Wi-Fi security enhancement that provides improved data encryption, relative to WEP.

**X**

**xDSL**

A generic term for the family of digital subscriber line (DSL) technologies, such as ADSL, HDSL, RADSL, and SDSL.

**Y**

**Yagi antenna**

A directional antenna used to concentrate wireless signals on a specific location

**802.11**

A family of specifications for wireless local area networks (WLANs) developed by a working group of the Institute of Electrical and Electronics Engineers (IEEE).

# Specifications

Hardware	
<b>Standards</b>	IEEE 802.11n, 802.11b, 802.11g, , 802.11e and 802.3af
<b>Interface</b>	1 x 10/100Mbps Auto-MDIX PoE LAN port
<b>LED Indicators</b>	Power, LAN, WPS, and Wireless
<b>Buttons</b>	Reset button – restores factory default settings WPS button - initiates WPS function On/off power switch
<b>Power Supply</b>	12V DC 0.5A external power adapter
<b>Power Consumption</b>	3.12 watts
<b>Dimensions (LxWxH)</b>	120 x 26 x 88mm (4.7 x 1.0 x 3.4in.)
<b>Weight</b>	145g (5.11oz)
<b>Temperature</b>	Operating: 0° ~ 40°C (32° ~ 104°F), Storage: -20°C ~ 60°C (-4° ~ 140°F)
<b>Humidity</b>	Operating: 5% ~ 90% non-condensing, Storage: 5% ~ 90% non-condensing
<b>Certifications</b>	CE, FCC
Wireless	
<b>Modulation Technique</b>	OFDM: BPSK, QPSK, 16-QAM, 64-QAM DBPSK, DQPSK, CCK
<b>Modes</b>	Access Point, Wireless Distribution System (WDS in AP mode), AP Client
<b>Antenna</b>	2 x 2dBi detachable antennas
<b>Frequency</b>	2.412 - 2.472 GHz
<b>Data Rate (Auto Fallback)</b>	802.11n: up to 300Mbps 802.11g: up to 54Mbps 802.11b: up to 11Mbps
<b>Output Power</b>	802.11n: 12dBm (typical) 802.11g: 15dBm (typical) 802.11b: 18dBm (typical)
<b>Receiving Sensitivity</b>	802.11n: -66dBm (typical) 802.11g: -74dBm (typical) 802.11b: -84dBm (typical)
<b>Encryption</b>	64/128-bit WEP, WPA/WPA2-RADIUS, WPA/WPA2-PSK
<b>Channels</b>	1-11 (FCC), 1-13 (ETSI)

\*Maximum wireless signal rates are referenced from IEEE 802.11 theoretical specifications. Actual data throughput and coverage will vary depending on interference, network traffic, building materials and other conditions.

## Limited Warranty

TRENDnet warrants its products against defects in material and workmanship, under normal use and service, for the following lengths of time from the date of purchase.

### TEW-638PAP – 3 Years Warranty

AC/DC Power Adapter, Cooling Fan, and Power Supply carry 1 year warranty.

If a product does not operate as warranted during the applicable warranty period, TRENDnet shall reserve the right, at its expense, to repair or replace the defective product or part and deliver an equivalent product or part to the customer. The repair/replacement unit's warranty continues from the original date of purchase. All products that are replaced become the property of TRENDnet. Replacement products may be new or reconditioned. TRENDnet does not issue refunds or credit. Please contact the point-of-purchase for their return policies.

TRENDnet shall not be responsible for any software, firmware, information, or memory data of customer contained in, stored on, or integrated with any products returned to TRENDnet pursuant to any warranty.

There are no user serviceable parts inside the product. Do not remove or attempt to service the product by any unauthorized service center. This warranty is voided if (i) the product has been modified or repaired by any unauthorized service center, (ii) the product was subject to accident, abuse, or improper use (iii) the product was subject to conditions more severe than those specified in the manual.

Warranty service may be obtained by contacting TRENDnet within the applicable warranty period and providing a copy of the dated proof of the purchase. Upon proper submission of required documentation a Return Material Authorization (RMA) number will be issued. An RMA number is required in order to initiate warranty service support for all TRENDnet products. Products that are sent to TRENDnet for RMA service must have the RMA number marked on the outside of return packages and sent to TRENDnet prepaid, insured and packaged appropriately for safe shipment. Customers shipping from outside of the USA and Canada are responsible for return shipping fees. Customers shipping from outside of the USA are responsible for custom charges, including but not limited to, duty, tax, and other fees.

**WARRANTIES EXCLUSIVE:** IF THE TRENDNET PRODUCT DOES NOT OPERATE AS WARRANTED ABOVE, THE CUSTOMER'S SOLE REMEDY SHALL BE, AT TRENDNET'S OPTION, REPAIR OR REPLACE. THE FOREGOING WARRANTIES AND REMEDIES ARE EXCLUSIVE AND ARE IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, EITHER IN FACT OR BY OPERATION OF LAW, STATUTORY OR OTHERWISE, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. TRENDNET NEITHER ASSUMES NOR AUTHORIZES ANY OTHER PERSON TO ASSUME FOR IT ANY OTHER LIABILITY IN CONNECTION WITH THE SALE, INSTALLATION MAINTENANCE OR USE OF TRENDNET'S PRODUCTS.

TRENDNET SHALL NOT BE LIABLE UNDER THIS WARRANTY IF ITS TESTING AND EXAMINATION DISCLOSE THAT THE ALLEGED DEFECT IN THE PRODUCT DOES NOT EXIST OR WAS CAUSED BY CUSTOMER'S OR ANY THIRD PERSON'S MISUSE, NEGLIGENCE, IMPROPER INSTALLATION OR TESTING, UNAUTHORIZED ATTEMPTS TO REPAIR OR MODIFY, OR ANY OTHER CAUSE BEYOND THE RANGE OF THE INTENDED USE, OR BY ACCIDENT, FIRE, LIGHTNING, OR OTHER HAZARD.

LIMITATION OF LIABILITY: TO THE FULL EXTENT ALLOWED BY LAW TRENDNET ALSO EXCLUDES FOR ITSELF AND ITS SUPPLIERS ANY LIABILITY, WHETHER BASED IN CONTRACT OR TORT (INCLUDING NEGLIGENCE), FOR INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL, OR PUNITIVE DAMAGES OF ANY KIND, OR FOR LOSS OF REVENUE OR PROFITS, LOSS OF BUSINESS, LOSS OF INFORMATION OR DATE, OR OTHER FINANCIAL LOSS ARISING OUT OF OR IN CONNECTION WITH THE SALE, INSTALLATION, MAINTENANCE, USE, PERFORMANCE, FAILURE, OR INTERRUPTION OF THE POSSIBILITY OF SUCH DAMAGES, AND LIMITS ITS LIABILITY TO REPAIR, REPLACEMENT, OR REFUND OF THE PURCHASE PRICE PAID, AT TRENDNET'S OPTION. THIS DISCLAIMER OF LIABILITY FOR DAMAGES WILL NOT BE AFFECTED IF ANY REMEDY PROVIDED HEREIN SHALL FAIL OF ITS ESSENTIAL PURPOSE.

**Governing Law:** This Limited Warranty shall be governed by the laws of the state of California.

Some TRENDnet products include software code written by third party developers. These codes are subject to the GNU General Public License ("GPL") or GNU Lesser General Public License ("LGPL").

Go to <http://www.trendnet.com/gpl> or <http://www.trendnet.com> Download section and look for the desired TRENDnet product to access to the GPL Code or LGPL Code. These codes are distributed WITHOUT WARRANTY and are subject to the copyrights of the developers. TRENDnet does not provide technical support for these codes. Please go to <http://www.gnu.org/licenses/gpl.txt> or <http://www.gnu.org/licenses/lgpl.txt> for specific terms of each license.
