

Maximum e.i.r.p. at any elevation angle above 30 degrees

Device installation report for FCC U-NII-1 band (5.15- 5.25GHz) compliance

The Federal Communications Commission (FCC) established new rules for the 5.15 – 5.25 GHz U-NII-1 band in the Report and Order FCC-14-30A1 are effective from 2nd June, 2014. With the help of professional installation, all the TRENDnet devices can be configured to comply with the power requirements set in the rules. For an angle of elevation which is above 30 degrees, the maximum EIRP limit should be set to 125mW (21 dBm). The compliance can be achieved through proper selection of antenna, angle of installation, and Tx power control to provide reasonable protection from harmful interference to the users, authorized devices, and co-channel NGSO/MSS operations.

- TRENDnet devices such as BSUs (Base Station Units)/ SUs (Subscriber Units) are installed by professional installers to work in fixed outdoor configurations.
 - These devices are in general mounted on a tower, roof, or at a place above the street level; therefore, it implies that all TRENDnet devices whether they have an external antenna or an integrated antenna support vertical alignment to achieve downward tilt.
 - All devices support TPC (Transmit Power Control) configuration with a range of (0 all power lower than necessary.
- Note: * Transmit power control varies with the product type and sp

Antenna Pattern from the horizon
