FCC ID: XVL-FSRB4C

IC Number: 8707A-RB4C

To Whom It May Concern:

This letter is to justify the choice of label location for the device bearing the above FCC ID and IC Number. The location was chosen to be on the enclosure pod cover, located on underside of the wrist worn device. The enclosure is ultrasonically welded to the device; therefore, it was acceptable as the label location. The front side of the device enclosure is the side that the end user sees during normal operation. Fatigue Science wants to reserve the front side free from markings and does not want label information on this side. For these reasons, the underside of the device is a logical choice.

At the factory, the device is assembled with the enclosure pod cover ultrasonically welded to the device to protect the electronics from moisture and electrostatic exposure. The FCC ID and IC Number will be etched onto the enclosure pod cover prior to finally assembly of the device. As the label is etched and affixed to the device, it will be readily viewable to the device's purchaser and to the end user.

Please contact the undersigned if you have any questions or need any further information.

Regards,

Adam Neilson
