Re: FCC ID: XVL123-RB4

To Whom It May Concern:

The following application is submitted on behalf of Fatigue Science, for evaluation of our model FSRB4B for approval certification under FCC Part 15.247. The FSRB4B is an end-product designed to monitor and store sleep and related activities. The FSRB4B contains a 2.4GHz radio for relaying telemetry data via standard BlueTooth Low Energy protocols and modulation. This radio was evaluated to the corresponding rules and found to be in compliance.

A handwritten signature in black ink, appearing to read "Adam Neilson", with a horizontal line extending to the right.
