

2. The second page of the submitted label exhibit does not clearly indicate the position of the label on this device. From the drawing provided, it appears that this label may be located on the printed circuit board inside the enclosure of this device. Please clarify the location of the equipment label with an amended label exhibit that clearly shows the location of the label on the exterior of the enclosure.

The EUT has a "wall mounted" back cover that the end consumer attaches to their wall. The rest of the product (with the PCB and label exposed) is later snapped onto this back cover to hold the product on the wall. The label is visible to the user at the time of installation and when batteries are placed in the product, consistent with labeling requirements for both countries.
