v090319

Equipment Under Test (EUT):	STP9040/STP9240
Test Commissioned by:	Sepura PLC Radio House St Andrews Road Cambridge Cambridgeshire CB4 1GR
Representative:	Steve Wood
Test Started:	21st January 2015
Test Completed:	21st January 2015
Test Engineer:	Dave Smith
Date of Report:	30th January 2015

Written by:	Dave Smith	Checked by:	Derek Barlow
Signature:		Signature:	Date:	30th January 2015	Date:	10th February 2015

dB Technology can only report on the specific unit(s) tested at its site. The responsibility for extrapolating this data to a product line lies solely with the manufacturer.

Test Standards Applied

CFR 47	*Code of Federal Regulations: Part 2 and Part 22*

Emissions Test Results Summary

CFR 47 **PASS**

Test	Port	Method	Limit	PASS/FAIL	*Notes*
Occuoied Bandwidth	antenna	Part 2.1049	20kHz	PASS	

specs_fccv100412

Note: this report only covers the occupied bandwidth test.

This Report shows that the EUT met the 20kHz occupied bandwidth measurement.

Contents

1 EUT Details

1.1 General

The EUT was a TETRA Voice + Data Hand Portable .

The device can transmit and receive over the following frequency band:

450MHz to 470MHz.

The nominal output power is 32.5dBm (1.8W).

The device can transmit in Trunked Mode Operation (TMO mode) or Direct Mode Operation (DMO mode)

The device has already been certified to FCC part 90 using the specific parts designed to accomodate Tetra devices. This allows a 22kHz occupied bandwidth.

The manufacturer is now seeking certification for other parts (e.g. Part 22) which specify 25kHz channel spacing but a bandwidth of 20kHz.

This unit tested under this report differs from the Part 90 approved product in that the software has been changed to support a new filter structure thus ensuring the product can meet the FCC requirements for 20kHz bandwidth. In all other aspects, the product remains unchanged.

This report is limited to measurements of occupied bandwidth with this new filter structure.

Measurements were made at the top, near middle and bottom of the appropriate frequency range:

Bottom: 450 MHz
Middle: 460 MHz
Top: 470 MHz

This Report shows that the EUT met the 20kHz occupied bandwidth measurement.

Details of the EUT and associated peripherals used during the tests are listed below. Figure 1 shows the interconnections between the EUT and peripherals.

Item	Manufacturer	Model	Description	Serial No:	Notes
1	Sepura	STP9040	TETRA Hand Portable	1PR201327G8099S	

1.2 Modifications to EUT and Peripherals

Details of any modifications that were required to achieve compliance are listed below. The modification numbers are referred to in the results sections as appropriate.

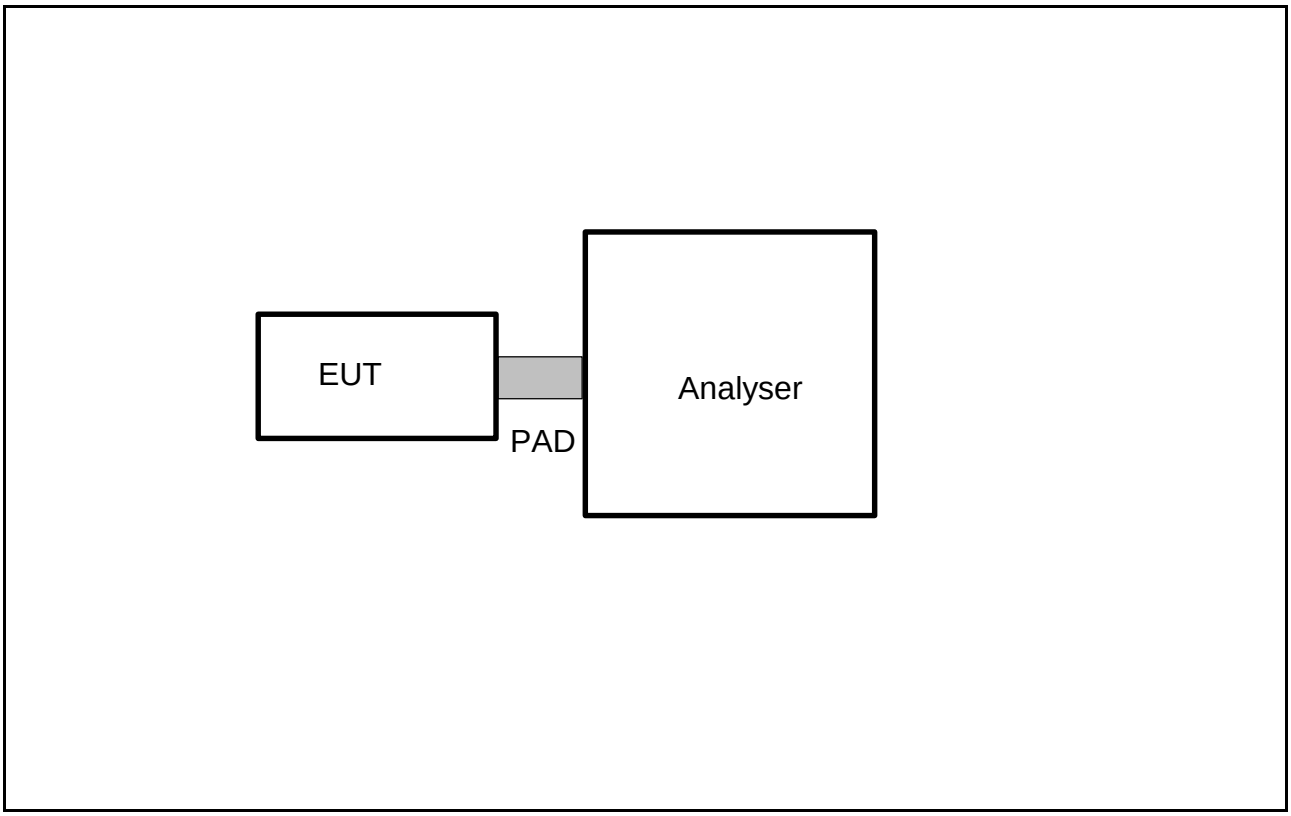
Mod No:	Details	Implemented for
0	As supplied for testing. No modifications were made. This sample was set to use the new filter structure to allow compliance with 20kHz bandwidth requirement.	

1.3 EUT Operating Modes

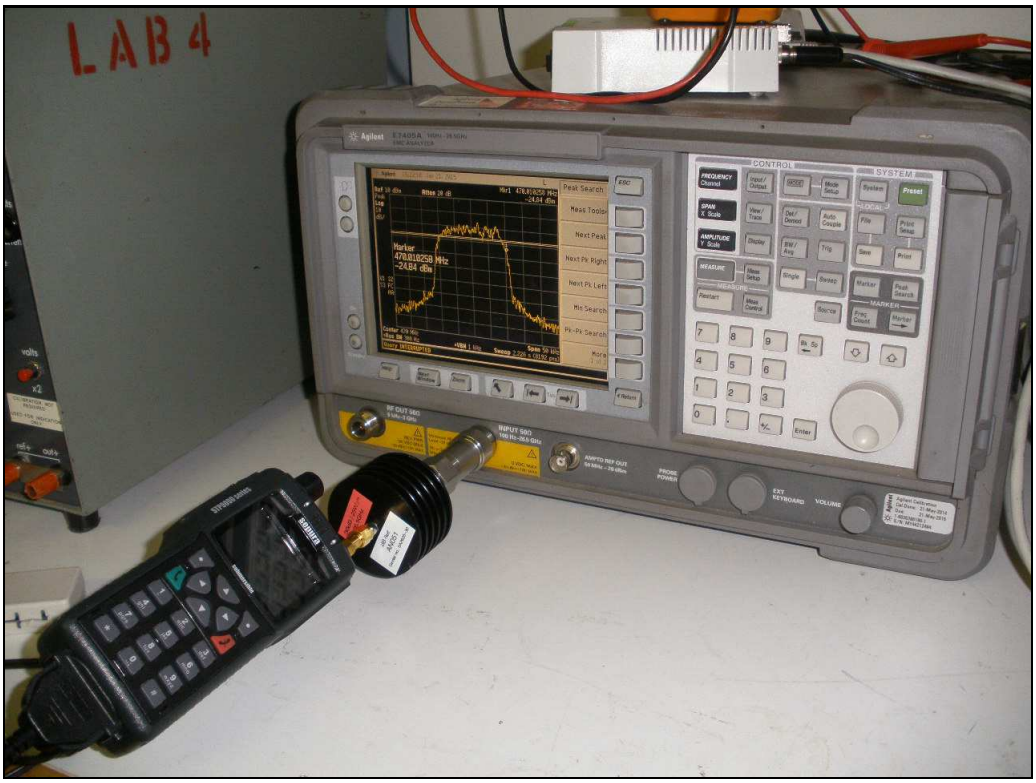
The EUT was tested in the following operating mode or modes. Generally, operating modes are chosen that will exercise the functions of the EUT as fully as possible and in a manner likely to produce maximum emission levels or susceptibility. Individual test result sheets reference the operating mode of the EUT.

Operating Mode	Details
1	Transmitting at full power on selected channel.

Figure 1 General Arrangement of EUT and Peripherals



Photograph 1 Arrangement of EUT and Peripherals



2 Test Equipment

The test equipment used during the tests was one or more of the items listed below. Individual test result sheets indicate which items were used.

Ref No:	Details	Serial Number	Cal Date	Cal Interval
R8	Agilent E7405A Spectrum Analyser	MY44212494	22/05/2014	1 year

3 Test Methods

3.1 Antenna Conducted Occupied Bandwidth

Measurements are made with the antenna output connected to a spectrum analyser via a suitable PAD. Sweeps are made with a 300Hz Resolution Bandwidth and a 1kHz Video Bandwidth. A peak detector is used. Markers are used to determine the 99% power bandwidth.

4 Test Results

The following sections contain tabulated test results. Plots of various scans are included at the back of this section.

Conducted Emissions (Signal)

Company:	Sepura PLC	*Product:*	STP9040/STP9240
Date:	21/01/2015	*Test Eng:*	Dave Smith
Ports:	antenna		
Test:	Part 2.1049	using limits of	20kHz
Ports:			
Test:		using limits of	

Notes	Comments and Observations

Measurements were made with continuous modulation applied.
Spectrum analyser results are shown in plots 1 to 3.

Using the "Bandwidth Power" function of the spectrum analyser, the following measurements were recorded:

450MHz 19.44 kHz

460MHz 19.34 kHz

470MHz 19.36 kHz

Limit:

20kHz
