1 Description of equipment under test (EUT)

Product:	OW50SL
Model:	PS-OW50SP
Serial number:	None (prototype)
Hardware version:	prototype
Software version:	prototype

Model differences:

Model name	Difference	Tested (checked)
PS-OW50SP	fully tested model that was provided by the applicant. Stand-alone, support all functions	<input checked="" type="checkbox"/>

Technical data:

Satellite 14000 MHz to 14500 MHz	19.8 MHz	28.1 dBm	35.5 dBi	63.6 dBm

2 FCC Exposure Limits

2.1. FCC, CFR 47 Section

The table below is excerpted from Table 1 of 47 CFR 1.1310 titled "Limits for Maximum Permissible Exposure (MPE), (ii) Limits for General Population/Uncontrolled Exposure"

Frequency Range (MHz)	Power Density (mW/cm ²)	Averaging Time (minutes)
1500 - 100000	1.0	30

where f = frequency in MHz

NOTE: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.

3 Prediction of MPE limit at given distance

Equation from page 18 of OET Bulletin 65, Edition 97-01

Linear form $S = PG / 4\pi R^2$

Where: S is the power density (W/m^2)

P is the power delivered to the antenna (W)

G is the antenna gain observed in the far-field region (linear)

R is the distance from antenna to point of interest (m)

Prediction: worst case [under FCC, CFR 47 Section]

Technologies:		Satellite	
	Frequency	14 263	MHz
PG	Declared max power (EIRP)	63.6	dBm
R	Distance	450	cm
S	MPE limit for uncontrolled exposure	1	mW/cm^2
Calculated Power density:		0.900 7	mW/cm^2

This prediction demonstrates the following:

The power density levels for FCC at a distance of **4.5 m** are below the maximum levels allowed by regulations.
