Subject: Attestation for Certification Application *FCC ID: XYD-TBSA1*

Telensa equipment is used for the control and monitoring of street lighting. By the nature of its application it is a specialist industrial product, and is installed by trained professionals and never by the general public.

The base station unit which is the subject of this application is installed on a column, mast or tall building at a height of typically 25-50ft, which is necessary for radio communication to the street lights in the locale. The equipment power connection is not via a plug and requires weatherproof termination by a professional engineer qualified to the local wiring code. Installation therefore requires safe working at height and electrical qualifications, which are both professional activities.

For further clarification, I have enclosed a copy of the Telensa product brochure which outlines the system that incorporates this base station unit.

Yours sincerely

Director
