Attestation Statement – Tune-up procedure Ocean Signal V100 VHF Handportable (GMDSS)

Dear Sir,

The V100 VHF handportable is factory setup for transmitter output power and modulation limiting levels during manufacture as part of an automated production process.

Adjustment of transmitter parameters and other RF tune-up is not possible or allowed by service personnel in the field. Ocean Signal service policy will require PCB replacement and return of the exchanged PCB to the factory if PCB level servicing is required.

For this reason, there is no tune-up procedure available as required by CFR47 part 2.1033(c)(9). Likewise the DC voltage to the final amplifier required by 2.1033(c)(8) is not provided.

Signed on behalf of Ocean Signal Ltd

David Sheekey
