Test Report No.: 18-1-0006201T01

1. Summary of test results

The test results apply exclusively to the test samples as presented in this Report. The CETECOM GmbH does not assume responsibility for any conclusions and generalizations taken in conjunction with other specimens or samples of the type of the item presented to tests. Also we refer on special conditions which the applicant should fulfill according §2.927 to §2.948, special focus regarding modification of the equipment and availability of sample equipment for market surveillance tests.

The Equipment Under Test (in this report, hereinafter referred as EUT) is a digital device. For this test report typical operating mode were tested according intended use of the equipment **excluding wireless operating** modes.

Following tests have been performed to show compliance with applicable FCC Part 15, Subpart B (Unintentional Radiators) of the CFR 47 Rules, September 2018.

1.1. TEST OVERVIEW ACCORDING FCC PART 15B

Test Report No.: 18-1-0006201T01
4. Description of test system set-up's
4.1. Test system set-up for AC power-line conducted emission measurements

Specification: ANSI C63.4-2014 chapter 7

General Description: The radio frequency voltage conducted back into the AC power line in the frequency range 150 kHz to 30 MHz has to be investigated. Compliance should be tested by measuring the radio frequency voltage between each power line and ground at the power terminals in the stated frequency range.

A 50 Ohm / 50 μ H line impedance stabilization network (LISN) is used coupling the interface to the measurement equipment. The EUT power input leads are connected through the LISN to the AC-power source. The LISN enclosure is electrically connected to the ground plane. The measuring instrument is connected to the coaxial output of the LISN.

Tabletop devices were set-up on a 80 cm height above reference ground plane, floor standing equipment 10 cm raised above ground plane. Measurements have been performed on each phase line and neutral line of the devices AC-power lines. The EUT was power supplied with 120 V/60 Hz. The EUT was tested in the defined operating mode and installed (connected) to accessory equipment according the general description of use given by the applicant.

Schematic:

Testing method:

Exploratory, preliminary measurements as a first step, determines the worst-case phase line (neutral or phase) as well as the most critical operating mode of the equipment. A complete frequency-sweep with PK-Detector is performed on each current-carrying conductor.

Final testing for power phases and critical frequencies (Margin to AV- or QP limit lower than 3 dB) as a second step includes measurements with receivers detector set to Quasi-Peak and Average.

Formula:

$$V_C = V_R + C_L \quad (1)$$

$$M = L_T - V_C \quad (2)$$

V_C = measured Voltage –corrected value

V_R = Receiver reading

C_L = Cable loss

M = Margin

L_T = Limit

Values are in dB, positive margin means value is below limit.

Test Report No.: 18-1-0006201T01
4.2. Test system set-up for radiated electric field measurement 30 MHz to 1 GHz

Specification: ANSI C63.4-2014 chapter 8.2.3

General Description: Evaluating the field emissions have to be done first by an exploratory emissions measurement and a final measurement for most critical frequencies. The tests are performed in a NSA-compliant semi anechoic chamber (SAC) recognized by the regulatory commissions.

Schematic:

Testing method:

Exploratory, preliminary measurements

The EUT and its associated accessories are placed on a non-conductive position manipulator (tipping device) of 0.8 m height which is placed on the turntable. By rotating the turntable (range 0° to 360°, step 90°) and the EUT itself either on 3-orthogonal axis (portable equipment) or 2-orthogonal axis (defined operational position of EUT) the emission spectrum and its characteristics was recorded with an EMI-receiver, broadband antenna and software.

Measurement antenna: horizontal and vertical, heights: 1,0 m and 1,82 m as worst-case determined by an exploratory emission measurements. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case of them. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

Final measurement on critical frequencies

Based on the exploratory measurements, the most critical frequencies are re-measured by main-taining the EUT's worst-case operation mode, cable position, etc. either on 10m OATS or 3m semi-anechoic chamber.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself either over 3-orthogonal axis (not defined usage position) or 2-orthogonal axis (defined usage position). The measurement antenna height between 1 m and 4 m.

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

Formula:

$$E_C = E_R + AF + C_L + D_F - G_A \quad (1)$$

$$M = L_T - E_C \quad (2)$$

AF = Antenna factor

C_L = Cable loss

D_F = Distance correction factor (if used)

E_C = Electrical field – corrected value

E_R = Receiver reading

G_A = Gain of pre-amplifier (if used)

L_T = Limit

M = Margin

All units are dB-units, positive margin means value is below limit.

Test Report No.: 18-1-0006201T01
4.3. Test system set-up for radiated electric field measurement above 1 GHz

Specification: ANSI C63.4-2014 chapter 8.3

General Description: Evaluating the emissions have to be done first by an exploratory emissions measurement and a final measurement for most critical frequencies. The tests are performed in a CISPR 16-1-4:2010 compliant semi anechoic room (SAR) with the ground covered with absorber recognized by the regulatory commission. The measurement distance was set to 3 meter for frequencies up to 18 GHz and 2 meter above 18 GHz. A logarithmic periodic antenna is used for the frequency range 30 MHz to 1 GHz. Horn antennas are used for frequency range 1 GHz to 40 GHz. The EUT is aligned within 3 dB beam width of the measurement antenna with three orthogonal axis measurements on the EUT.

Schematic:

Testing method:

Exploratory, preliminary measurements

The EUT and its associated accessories are placed on the turntable. By rotating the turntable (range 0° to 360°, step 15) the emission spectrum and its characteristics was recorded with an EMI-receiver, broadband antenna and software.

The measurements are performed in horizontal and vertical polarization of the measurement antennas. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case of them. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

Final measurement on critical frequencies

Based on the exploratory measurements, the most critical frequencies are re-measured by maintaining the EUT's worst-case operation mode, cable position, etc.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, The measurement antenna height is being varied between 1 m and 4 m and being tilted

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

Formula:

$$E_C = E_R + AF + C_L + D_F - G_A \quad (1)$$

$$M = L_T - E_C \quad (2)$$

E_C = Electrical field – corrected value

E_R = Receiver reading

M = Margin

L_T = Limit

AF = Antenna factor

C_L = Cable loss

D_F = Distance correction factor (if used)

G_A = Gain of pre-amplifier (if used)

All units are dB-units, positive margin means value is below limit.

5.3.1. Test location and equipment absorber modified SAC

test location	☒ CETECOM Duesseldorf (Chapter 2.2.1)		☐ Please see Chapter 2.2.2	
test site	☐ 25911 EMI field < 1GHz; SAC5	☒ 25912 EMI field > 1GHz; SAC5	☐ 25901 EMI conducted	
Receiver	☐ 25311 ESU 40	☒ 25348 ESR 7	☐	
Antenna	☐ 25038 HFH2-Z2	☐ 25357 HL562E	☒ 25364 HF907	
LISN	☐ 25261 ESH2-Z5	☐ 25156 ESH3-Z6	☐ 25263 ESH3-Z6	
signalling	☐ 20547 CMU 200	☐ 25xxx CMU 200	☐ 20594 CMW500	☐ not used
DC voltage	☐ 25036 HP 6267 B	☒ 100 V Via Power Supply XANTREX XFR150-18	☐ 25289 24V via TDK-Lambda Americas Inc.	
AC voltage	☐ 230 V 50 Hz via public mains		☐ 25289 120 V 60 Hz via EM Test DPA 503N	

5.3.2. Requirements/Limits (CLASS B equipment)

FCC	☒ Part 15 Subpart B, §15.109 class B			
IC	☐ RSS-Gen., Issue 4, Chapter 8.9, Table 4+6 (transmitter licence exempt) ☐ RSS-Gen., Issue 4, Chapter 8.9, Table 2 (receiver) ☐ ICES-003, Issue 6, Chapter 6.2.2, Table 7 (class B)			
ANSI	☒ C63.4-2014 ☐ C63.10-2013			
Frequency [MHz]	Limits			
	AV [µV/m]	AV [dBµV/m]	Peak [µV/m]	Peak [dBµV/m] or [dBm/MHz]
above 1 GHz for frequencies as defined in §15.205	500	54.0	5000	74.0 dBµV/m

5.3.3. Test condition and measurement test set-up

Signal link to test system (if used):	☐ air link	☐ cable connection	☐ none
EUT-grounding	☒ none	☐ with power supply	☐ additional connection
Equipment set up	☒ table top	☐ floor standing	
Climatic conditions		Temperature: (21.1±3°C)	Rel. humidity: (43±20)%
EMI-Receiver (Analyzer) Settings	Scan frequency range:	☒ 1 – 6 GHz ☐ other:	
	Scan-Mode	☒ 6 dB EMI-Receiver Mode ☐ 3 dB spectrum analyser mode	
	Detector	Peak / Average	
	RBW/VBW	1 MHz	
	Mode:	Repetitive-Scan, max-hold	
Scan step		400 kHz	
Sweep-Time		10 ms	
General measurement procedures		Please see chapter "Test system set-up for radiated electric field measurements above 1 GHz"	

5.3.4. Measurement Results

The results are presented below in summary form only. For more information please see diagrams included in annex 1.

Table of measurement results:

Dia-gram no.	Carrier Channel		Frequency range	Set-up no.	OP-mode no.	Remark	Used detector			Result
	Range	No.					PK	AV	QP	
4.01	nominal	--	1 - 6 GHz	1	1		☒	☒	☐	passed
4.02	nominal	--	1 - 6 GHz	2	1		☒	☒	☐	passed

Remark: see diagrams in annex 1 for more details

Test Report No.: 18-1-0006201T01
5.4. Measurement uncertainties

The reported uncertainties are calculated based on the standard uncertainty multiplied with the appropriate coverage factor k , such that a confidence level of approximately 95% is achieved.

For uncertainty determination, each component used in the concrete measurement set-up was taken in account and it's contribution to the overall uncertainty according it's statistical distribution calculated.

Following table shows expectable uncertainties for each measurement type performed.

RF-Measurement	Reference	Frequency range	Calculated uncertainty based on a confidence level of 95%	Remarks
Conducted emissions (U_{CISPR})	CISPR 16-2-1	9 kHz - 150 kHz 150 kHz - 30 MHz	4.0 dB 3.6 dB	-
Radiated emissions Enclosure	CISPR 16-2-3	30 MHz - 1 GHz 1 GHz - 18 GHz	4.2 dB 5.1 dB	E-Field
Disturbance power	CISPR 16-2-2	30 MHz - 300 MHz	-	-
Radiated emissions Enclosure	-	150 kHz - 30 MHz	5.0 dB	Magnetic field E-field Substitution
		30 MHz - 1 GHz	4.2 dB	
		1 GHz - 20 GHz	3.17 dB	

Table: measurement uncertainties, valid for conducted/radiated measurements

Test Report No.: 18-1-0006201T01
6. Abbreviations used in this report

The abbreviations	
ANSI	American National Standards Institute
AV , AVG, CAV	Average detector
EIRP	Equivalent isotropically radiated power, determined within a separate measurement
EGPRS	Enhanced General Packet Radio Service
EUT	Equipment Under Test
FCC	Federal Communications Commission, USA
IC	Industry Canada
n.a.	not applicable
Op-Mode	Operating mode of the equipment
PK	Peak
RBW	resolution bandwidth
RF	Radio frequency
RSS	Radio Standards Specification, Dokuments from Industry Canada
Rx	Receiver
TCH	Traffic channel
Tx	Transmitter
QP	Quasi peak detector
VBW	Video bandwidth
ERP	Effective radiated power

7. Accreditation details of CETECOM's laboratories and test sites

Ref.-No.	Accreditation Certificate	Valid for laboratory area or test site	Accreditation Body
-	D-PL-12047-01-01	All laboratories and test sites of CETECOM GmbH, Essen	DAkKS, Deutsche Akkreditierungsstelle GmbH
337 487 558 348 348	MRA US-EU 0003	Radiated Measurements 30 MHz to 1 GHz, 3 m / 10 m (OATS) Radiated Measurements 30 MHz to 1 GHz, 3 m (SAC) Radiated Measurements above 1 GHz, 3 m (FAR) Mains Ports Conducted Interference Measurements Telecommunication Ports Conducted Interference Measurement.	FCC, Federal Communications Commission Laboratory Division, USA
337 487 550 558	3462D-1 3462D-2 3462D-2 3462D-3	Radiated Measurements 30 MHz to 1 GHz, 3 m / 10 m (OATS) Radiated Measurements 30 MHz to 1 GHz, 3 m (SAR) Radiated Measurements 1 GHz to 6 GHz, 3 m (SAR) Radiated Measurements above 1 GHz, 3 m (FAR)	IC, Industry Canada Certification and Engineering Bureau
487 550 348 348	R-2666 G-301 C-2914 T-1967	Radiated Measurements 30 MHz to 1 GHz, 3 m (SAR) Radiated Measurements 1 GHz to 6 GHz, 3 m (SAR) Mains Ports Conducted Interference Measurements Telecommunication Ports Conducted Interference Measurements.	VCCI, Voluntary Control Council for Interference by Information Technology Equipment, Japan
OATS = Open Area Test Site, SAC = Semi Anechoic Chamber, FAR = Fully Anechoic Room

Accredited EMC Test Laboratory

8. Instruments and Ancillary

8.1. Used equipment "CTC"

The "Ref.-No" in the left column of the following tables allows the clear identification of the laboratory equipment.

8.1.1. Test software and firmware of equipment

Ref.-No.	Equipment	Type	Serial-No.	Version of Firmware or Software during the test
358	Semi Anechoic Chamber	Albatross	No. 5	- -
348	EMI Test Receiver	ESR 7	825132/017	Firm.= 1.21 , OTP=2.0, GRA=2.0
370	EMI Test Receiver	ESR 7	101715	-
235	EMI Test Receiver	ESCS 30	100160	Firm.= 2.30, OTP= 02.01, GRA= 02.36
311	EMI Test Receiver	ESU40	1000-30	Firmware=4.43 SP3, Bios=V5.1-16-3, Spec. =01.00
358	Ultra-Broadband Antenna	HL562E	100824	- -
364	Double Rigid Horn Antenna	HF907	102488	- -
352	Continuous switch Unit	OSP	100123	Firmware=06.06
000	EMI Test Software	EMC 32	-	EMC 32 Version 9.26
021	Line Impedance Stabilization Network [1]	ESH2-Z5	872460/004	CISPR 16 compliant
261	Line Impedance Stabilization Network [2]	ESH2-Z5	871777/041	CISPR 16 compliant
316	Multifunction AC/DC power Source	Netwave 20	V1227113059	Firmware= 5.03.03
360	Antenna Tower	BAM 4.5-P	091/17791115	- -
361	Controller TT & Tower	NCD	202/17791115	Firmware= 0.4.03
363	Turn Table	TT 4.0-4t	553/17791115	- -
362	Measurement table	PTT 1.5 x1x0.8	127	- -

8.1.2. Single instruments and test systems

Ref.-No.	Equipment	Type	Serial-No.	Manufacturer	Interval of calibration	Remark	Cal due
358	Semi Anechoic Chamber	SAC	No. 5	Albatross	10 Y	-	05 / 2026
348	EMI Test Receiver	ESR 7	825132/017	Rohde & Schwarz	24 M	-	12 / 2017
370	EMI Test Receiver	ESR 7	101715	Rohde & Schwarz	24 M	-	01 / 2018
235	EMI Test Receiver	ESCS 30	100160	Rohde & Schwarz	24 M	-	07 / 2018
311	EMI Test Receiver	ESU40	1000-30	Rohde & Schwarz	24 M	-	07 / 2018
358	Ultra-Broadband Antenna	HL562E	100824	Rohde & Schwarz	36 M	-	12 / 2018
364	Double Rigid Horn Antenna	HL562E	102488	Rohde & Schwarz	36 M	-	12 / 2018
352	Continuous switch Unit	OSP	100123	Rohde & Schwarz	36 M	-	12 / 2018
000	EMI Test Software	EMC 32	-	Rohde & Schwarz	- -	-	- -
021	Line Impedance Stabilization Network [1]	ESH2-Z5	872460/004	Rohde & Schwarz	24 M	1a	06/ 2018
261	Line Impedance Stabilization Network [1]	ESH2-Z5	871777/041	Rohde & Schwarz	24 M	3	06 / 2018
316	Multifunction AC/DC power Source	Netwave 20	V1227113059	EM-Test	36 M	1g	05 / 2018
360	Antenna Tower	BAM 4.5-P	872460/004	Maturo	- -	-	- -
361	Controller TT & Tower	NCD	871777/041	Maturo	- -	-	- -
363	Turn Table	TT 4.0-4t	V1227113059	Maturo	- -	-	- -
362	Measurement table	PTT 1.5 x1x0.8	127	Maturo	- -	-	- -

8.1.3. Legend

Interval of calibration	12 M	12 month
	24 M	24 month
	36 M	36 month
	10 Y	10 Years
	24/12 M	Calibration every 24 months, between this every 12 months internal validation
	36/12 M	Calibration every 36 months, between this every 12 months internal validation
	Pre-m	Check before starting the measurement
	-	Without calibration

9. Versions of test reports (change history)

Version	Applied changes	Date of release
--	Initial Release	2018-10-09
