

DESCRIPTION

While pressing the key of the remote control, coding IC to get electric voltage to begin to work LED bright, code the IC exportation data to 433.92 MHzs to make electric circuit, high frequency after make the wireless signal send to first degree enlarge electric circuit to carry on enlarge, enlarge behind of the signal send till the last a class to enlarge electric circuit, wasing pass by the low frequency rate after handle the electric circuit send to shoot antenna, shooting wireless electric wave toward the air.
