# FCC §1.1310 & §2.1091- MAXIMUM PERMISSIBLE EXPOSURE (MPE)

### **Applicable Standard**

According to 1.1310, 2.1091 systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

Limits for Maximum Permissible Exposure (MPE)

Limits for Occupational/Controlled Exposure									
Frequency Range (MHz)	Electric Field Strength (E) (V/m)	Magnetic Field Strength (H) (A/m)	Power Density (S) (mW/cm²)	Averaging Time  E ,  H  or S (minutes)					
0.3- 3.0	614	1.63	(100)*	6					
3.0 - 30	1842/f	4.89/f	$(900/f^2)*$	6					
30-300	61.4	0.163	1.0	6					
300-1500	/	/	f/300	6					
1500-100,000	/	/	5	6					

f = frequency in MHz;

#### **MPE Calculation**

## Prediction of power density at the distance of the applicable MPE limit

$$S = PG/4\pi R^2$$

Where: S = power density (in appropriate units, e.g. mW/cm<sup>2</sup>);

P = power gain of the antenna (in appropriate units, e.g., mW);
G = power gain of the antenna in the direction of interest relative to an isotropic radiator
R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

#### **MPE Results**

	Antenna Gain		Maximum Peak				Power
Frequency (MHz)	(dBi)	(numeric)	output power including Tune-up Tolerance (mW)	Duty cycle	Evaluation Distance (cm)	Power Density (mW/cm <sup>2</sup> )	Density Limit (mW/cm <sup>2</sup> )
136-174	8	6.31	60000	50%	200	0.38	1.0

**Result:** The device meet FCC MPE of the Occupational/Controlled use at 200 cm distance.

Report No.: RDG200413001-00A
