## FCC §1.1310 \& §2.1091- MAXIMUM PERMISSIBLE EXPOSURE (MPE)

## Applicable Standard

According to $1.1310,2.1091$ systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

Limits for Maximum Permissible Exposure (MPE)

| Limits for Occupational/Controlled Exposure |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency <br> Range (MHz) | Electric Field <br> Strength (E) <br> $($ V/m) | Magnetic Field <br> Strength (H) (A/m) | Power Density (S) <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ | Averaging Time <br> $\|\mathrm{E}\|,\|\mathrm{H}\|$ or S <br> (minutes) |  |
| $0.3-3.0$ | 614 | 1.63 | $(100)^{*}$ | 6 |  |
| $3.0-30$ | $1842 / \mathrm{f}$ | $4.89 / \mathrm{f}$ | $\left(900 / \mathrm{f}^{2}\right)^{*}$ | 6 |  |
| $30-300$ | 61.4 | 0.163 | 1.0 | 6 |  |
| $300-1500$ | $/$ | $/$ | $\mathrm{f} / 300$ | 6 |  |
| $1500-100,000$ | $/$ | $/$ | 5 | 6 |  |

$\mathrm{f}=$ frequency in MHz;

* = Plane-wave equivalent power density;

## MPE Calculation

Prediction of power density at the distance of the applicable MPE limit

$$
\mathrm{S}=\mathrm{PG} / 4 \pi \mathrm{R}^{2}
$$

Where: $\mathrm{S}=$ power density (in appropriate units, e.g. $\mathrm{mW} / \mathrm{cm}^{2}$ );
$\mathrm{P}=$ power input to the antenna (in appropriate units, e.g., mW );
$\mathrm{G}=$ power gain of the antenna in the direction of interest relative to an isotropic radiator
$\mathrm{R}=$ distance to the center of radiation of the antenna (appropriate units, e.g., cm);

## MPE Results

| Frequency <br> (MHz) | Antenna Gain |  | Maximum <br> Average output <br> power including <br> Tune-up <br> Tolerance | Evaluation <br> Distance <br> $(\mathbf{c m})$ | Power <br> Density <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ | MPE <br> Limit <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (dBi) | (numeric) | (mW) |  | 0.94 | 1.0 |
|  | 10 | 10 | 26500 | 150 | 0.0 |  |

Note: the target power is 53 W , the device operation $50 \%$ duty cycle(average power 26.5 W ).
Result: The device meet FCC MPE at 150 cm distance
