| Test Freq. Range | 2400~2483.5 MHz                       |
| Received Date    | Oct. 16, 2015                         |
| Final Test Date  | Nov. 19, 2015                         |
| Submission Type  | Original Equipment                    |

#### Statement

#### Test result included is only for the IEEE 802.15.4 ZigBee of the product.

The test result in this report refers exclusively to the presented test model / sample.

Without written approval of SPORTON International Inc., the test report shall not be reproduced except in full. The measurements and test results shown in this test report were made in accordance with the procedures and found in compliance with the limit given in ANSI C63.10-2013, 47 CFR FCC Part 15 Subpart C and KDB558074 D01 v03r03.

The test equipment used to perform the test is calibrated and traceable to NML/ROC.

### 1. VERIFICATION OF COMPLIANCE

Product Name: SunPower Monitoring System with PVS5c

Brand Name : SUNPOWER

Model No. : PVS5c

Applicant: SunPower Corporation

Test Rule Part(s): 47 CFR FCC Part 15 Subpart C § 15.247

Sporton International as requested by the applicant to evaluate the EMC performance of the product sample received on Oct. 16, 2015 would like to declare that the tested sample has been evaluated and found to be in compliance with the tested rule parts. The data recorded as well as the test configuration specified is true and accurate for showing the sample's EMC nature.

Sam Chen

## 3. GENERAL INFORMATION

### 3.1. Product Details

| Items                          | Description                    |
|--------------------------------|--------------------------------|
| Power Type                     | Internal power supply          |
| Modulation                     | DSSS (O-QPSK)                  |
| Data Rate (Mbps)               | DSSS (250kbps)                 |
| Frequency Range                | 2400~2483.5 MHz                |
| Channel Number                 | 15                             |
| Channel Band Width (99%)       | For Zigbee module 1: 2.64 MHz  |
|                                | For Zigbee module 2: 2.66 MHz  |
| Maximum Conducted Output Power | For Zigbee module 1: 21.89 dBm |
|                                | For Zigbee module 2: 21.79 dBm |
| Carrier Frequencies            | Please refer to section 3.6    |
| Antenna                        | Please refer to section 3.5    |

### 3.2. Accessories

| Description |   |  |
|-------------|---|--|
| Power cord  | 2.0 meter, non-shielded, w/o ferrite core |  |

# 3.3. Table for Zigbee Module

The EUT has two Zigbee modules and their information in the following table:

| Brand Name | Model No. Remark |                 |
|------------|------------------|-----------------|
| Ember      | EM357            | Zigbee module 1 |
| Ember      | EM357            | Zigbee module 2 |

## 3.4. Table for WWAN Module

The EUT has two WWAN modules and their information in the following table:

| Brand Name | Model No.          | FCC ID        | Bands        | Remark         |
|------------|--------------------|---------------|--------------|----------------|
|            | HE910-D            | RI7HE910      | GSM 850      | WWAN module 1  |
|            |                    |               | GSM 1900     |                |
| Telit      |                    |               | WCDMA Band 2 |                |
|            |                    |               | WCDMA Band 4 |                |
|            |                    |               | WCDMA Band 5 |                |
| OUECTEL    | UC20GA-128-NCH-STD | XMR201312UC20 | WCDMA Band 2 | WWAN module 2  |
| QUECTEL    |                    |               | WCDMA Band 5 | www.iniodule 2 |

Report Format Version: Rev. 01 : 3 of 51 Page No. FCC ID: YAW513407 Issued Date : Dec. 01, 2015

### 3.5. Table for Filed Antenna

| Ant. | Brand    | Model Name              | Hong Lin P/N | Туре | Connector | Gain (dBi) |
|------|----------|-------------------------|--------------|------|-----------|------------|
| 1    | Hong Lin | IGW-2220OUZ-A2 Zigbee-1 | 290-10333    | PCB  | I-PEX     | 2.02       |
| 2    | Hong Lin | IGW-2220OUZ-A2 Zigbee-2 | 290-10334    | PCB  | I-PEX     | 2.89       |

Note: The EUT has two antennas for Zigbee function.

#### For Zigbee module 1 (1TX, 1RX):

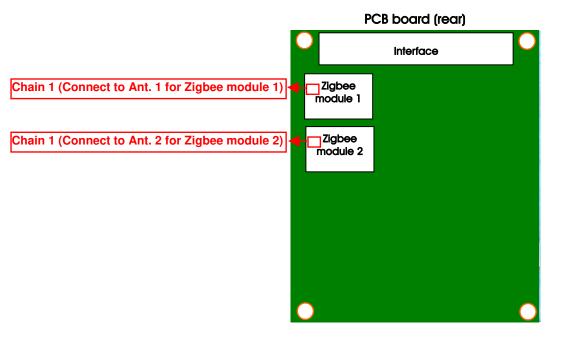

Only Ant. 1 can be use as transmitting/receiving antenna.

Only Chain 1 can be used as transmitting/receiving functions.

#### For Zigbee module 2 (1TX, 1RX):

Only Ant. 2 can be use as transmitting/receiving antenna.

Only Chain 1 can be used as transmitting/receiving functions.

FCC ID: YAW513407 Issued Date : Dec. 01, 2015

# 3.6. Table for Carrier Frequencies

| Frequency Band    | Channel No. | Frequency | Channel No. | Frequency |
|-------------------|-------------|-----------|-------------|-----------|
|                   | 11          | 2405 MHz  | 19          | 2445 MHz  |
|                   | 12          | 2410 MHz  | 20          | 2450 MHz  |
|                   | 13          | 2415 MHz  | 21          | 2455 MHz  |
| 2400~2483.5 MHz   | 14          | 2420 MHz  | 22          | 2460 MHz  |
| 2400~2463.5 IVIAZ | 15          | 2425 MHz  | 23          | 2465 MHz  |
|                   | 16          | 2430 MHz  | 24          | 2470 MHz  |
|                   | 17          | 2435 MHz  | 25          | 2475 MHz  |
|                   | 18          | 2440 MHz  | -           | -         |

Page No. : 5 of 51

Issued Date : Dec. 01, 2015

#### 3.7. Table for Test Modes

Preliminary tests were performed in different data rate to find the worst radiated emission. The data rate shown in the table below is the worst-case rate with respect to the specific test item. Investigation has been done on all the possible configurations for searching the worst cases. The following table is a list of the test modes shown in this test report.

| Test Items  | Mode    | Data Rate | Channel  | Chain |
|---|---------|-----------|----------|-------|
| AC Power Line Conducted Emissions                 | СТХ     | -         | -        | -     |
| Maximum Conducted Output Power                    | TX Mode | 250 kbps  | 11/18/25 | 1     |
| Power Spectral Density                            | TX Mode | 250 kbps  | 11/18/25 | 1     |
| 6dB Spectrum Bandwidth                            |         |           |          |       |
| Radiated Emissions 9kHz~1GHz                      | CTX     | -         | -        | -     |
| Radiated Emissions 1GHz~10 <sup>th</sup> Harmonic | TX Mode | 250 kbps  | 11/18/25 | 1     |
| Band Edge Emissions                               | TX Mode | 250 kbps  | 11/18/25 | 1     |

Note: 1. The EUT can only be used at Y axis position.

2. All the specification of test configurations and test modes has been defined as the user usage.

The following test modes were performed for all tests:

#### For Co-location MPE test:

The EUT could be applied with 2.4GHz WLAN function, ZigBee function and WWAN function; therefore Co-location Maximum Permissible Exposure (Please refer to FA5O1212) test is added for simultaneously transmit between 2.4GHz WLAN function, ZigBee function and WWAN function.

The transmit simultaneously mode:

- 1. 2.4GHz WLAN + ZigBee (Zigbee module 1) + ZigBee (Zigbee module 2) + WCDMA (WWAN module 1)
- 2. 2.4GHz WLAN + ZigBee (Zigbee module 1) + ZigBee (Zigbee module 2) + WCDMA (WWAN module 2)

### 3.8. Table for Testing Locations

| Test Site Location                         |   |  |  |          |          |  |

## 3.10. Table for Parameters of Test Software Setting

During testing, Channel and Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product.

#### Power Parameters of IEEE 802.15.4 ZigBee

For Zigbee module 1:

| Test Software Version | DOS      |          |          |  |
|-----------------------|----------|----------|----------|--|
| Frequency             | 2405 MHz | 2440 MHz | 2475 MHz |  |
| IEEE 802.15.4 ZigBee  | 0        | -5       | -9       |  |

#### For Zigbee module 2:

| Test Software Version | DOS      |                   |    |  |
|-----------------------|----------|-------------------|----|--|
| Frequency             | 2405 MHz | 2440 MHz 2475 MHz |    |  |
| IEEE 802.15.4 ZigBee  | 0        | -2                | -5 |  |

## 3.11. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

### 4. TEST RESULT

#### 4.1. AC Power Line Conducted Emissions Measurement

#### 4.1.1. Limit

For a Low-power Radio-frequency Device which is designed to be connected to the AC power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed below limits table.

| Frequency (MHz) | QP Limit (dBuV) | AV Limit (dBuV) |
|-----------------|-----------------|-----------------|
| 0.15~0.5        | 66~56           | 56~46           |
| 0.5~5           | 56              | 46              |
| 5~30            | 60              | 50              |

#### 4.1.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the receiver.

| Receiver Parameters | Setting  |
|---------------------|----------|
| Attenuation         | 10 dB    |
| Start Frequency     | 0.15 MHz |
| Stop Frequency      | 30 MHz   |
| IF Bandwidth        | 9 kHz    |

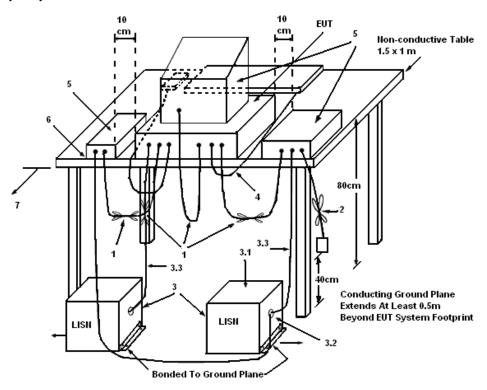

#### 4.1.3. Test Procedures

- Configure the EUT according to ANSI C63.10. The EUT or host of EUT has to be placed 0.4 meter far
  from the conducting wall of the shielding room and at least 80 centimeters from any other
  grounded conducting surface.
- 2. Connect EUT or host of EUT to the power mains through a line impedance stabilization network (LISN).
- 3. All the support units are connected to the other LISNs. The LISN should provide 50uH/50ohms coupling impedance.
- 4. The frequency range from 150 kHz to 30 MHz was searched.
- 5. Set the test-receiver system to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- 6. The measurement has to be done between each power line and ground at the power terminal.

 Report Format Version: Rev. 01
 Page No. : 11 of 51

 FCC ID: YAW513407
 Issued Date : Dec. 01, 2015

#### 4.1.4. Test Setup Layout

#### LEGEND:

- (1) Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- (2) I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- (3) EUT connected to one LISN. Unused LISN measuring port connectors shall be terminated in 50  $\Omega$ . LISN can be placed on top of, or immediately beneath, reference ground plane.
- (3.1) All other equipment powered from additional LISN(s).
- (3.2) Multiple outlet strip can be used for multiple power cords of non-EUT equipment.
- (3.3) LISN at least 80 cm from nearest part of EUT chassis.
- (4) Cables of hand-operated devices, such as keyboards, mice, etc., shall be placed as for normal use.
- (5) Non-EUT components of EUT system being tested.
- (6) Rear of EUT, including peripherals, shall all be aligned and flush with rear of tabletop.
- (7) Rear of tabletop shall be 40 cm removed from a vertical conducting plane that is bonded to the ground plane.

#### 4.1.5. Test Deviation

There is no deviation with the original standard.

#### 4.1.6. EUT Operation during Test

The EUT was placed on the test table and programmed in normal function.

Issued Date : Dec. 01, 2015

### 4.2. Maximum Conducted Output Power Measurement

#### 4.2.1. Limit

The limit for output power is 30dBm.

## 4.2.2. Measuring Instruments and Setting

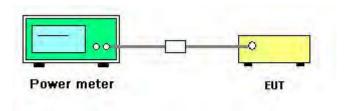

Please refer to section 5 of equipments list in this report. The following table is the setting of the power meter.

| Power Meter Parameter | Setting  |
|-----------------------|--|
| Bandwidth             | 50MHz bandwidth is greater than the EUT emission bandwidth |
| Detector              | Average  |

#### 4.2.3. Test Procedures

- 1. Test procedures refer KDB558074 D01 v03r03 section 9.2.3.2.
- 2. This procedure provides an alternative for determining the RMS output power using a broadband RF average power meter with a thermocouple detector.

### 4.2.4. Test Setup Layout

#### 4.2.5. Test Deviation

There is no deviation with the original standard.

## 4.2.6. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

 Report Format Version: Rev. 01

### 4.3. Power Spectral Density Measurement

#### 4.3.1. Limit

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

#### 4.3.2. Measuring Instruments and Setting

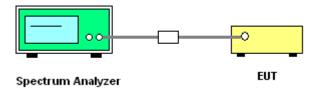

Please refer to section 5 of equipments list in this report. The following table is the setting of Spectrum Analyzer.

| Spectrum Parameter | Setting  |
|--------------------|--|
| Attenuation        | Auto   |
| Span Frequency     | 5-30 % greater than the DTS channel bandwidth. |
| RBW                | 3 kHz ≤ RBW ≤ 100kHz                           |
| VBW                | ≥ 3 x RBW                                      |
| Detector           | Peak   |
| Trace              | Max Hold                                       |
| Sweep Time         | Auto couple                                    |

### 4.3.3. Test Procedures

- Test was performed in accordance with KDB558074 D01 v03r03 for Performing Compliance Measurements on Digital Transmission Systems (DTS) - section 10.2 Method PKPSD (peak PSD).
- Use this procedure when the maximum conducted output power in the fundamental emission is
  used to demonstrate compliance. The EUT must be configured to transmit continuously at full power
  over the measurement duration.
- 3. Ensure that the number of measurement points in the sweep  $\geq 2$  x span/RBW (use of a greater number of measurement points than this minimum requirement is recommended).
- 4. Use the peak marker function to determine the maximum level in any 3 kHz band segment within the fundamental EBW.
- 5. The resulting PSD level must be  $\leq$  8 dBm.

#### 4.4.3. Test Procedures

#### For Radiated 6dB Bandwidth Measurement:

- 1. The transmitter was radiated to the spectrum analyzer in peak hold mode.
- Test was performed in accordance with KDB558074 D01 v03r03 for Performing Compliance
   Measurements on Digital Transmission Systems (DTS) section 8.0 DTS bandwidth=> 8.1 Option 1.
- 3. Measured the spectrum width with power higher than 6dB below carrier.

#### 4.4.4. Test Setup Layout

#### For Radiated 6dB Bandwidth Measurement:

This test setup layout is the same as that shown in section 4.5.4.

 Report Format Version: Rev. 01
 Page No.
 : 21 of 51

 FCC ID: YAW513407
 Issued Date
 : Dec. 01, 2015

## 4.4.5. Test Deviation

There is no deviation with the original standard.

# 4.4.6. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

Report Format Version: Rev. 01 : 22 of 51 Page No. Issued Date : Dec. 01, 2015

FCC ID: YAW513407

## 4.4.7. Test Result of 6dB Spectrum Bandwidth

| Temperature   | <b>25</b> ℃ | Humidity       | 45%             |
|---------------|-------------|----------------|-----------------|
| Test Engineer | Eddie Weng  | Configurations | 802.15.4 Zigbee |

# Configuration 802.15.4 Zigbee

### For Zigbee module 1:

| Channel | Frequency | 6dB Bandwidth<br>(MHz) | 99% Occupied<br>Bandwidth<br>(MHz) | Min. Limit<br>(kHz) | Test Result |
|---------|-----------|------------------------|------------------------------------|---------------------|-------------|
| 11      | 2405 MHz  | 1.18                   | 2.57                               | 500.00              | Complies    |
| 18      | 2440 MHz  | 1.16                   | 2.47                               | 500.00              | Complies    |
| 25      | 2475 MHz  | 1.59                   | 2.64                               | 500.00              | Complies    |

## For Zigbee module 2:

| Channel | Frequency | 6dB Bandwidth<br>(MHz) | 99% Occupied<br>Bandwidth<br>(MHz) | Min. Limit<br>(kHz) | Test Result |
|---------|-----------|------------------------|------------------------------------|---------------------|-------------|
| 11      | 2405 MHz  | 1.18                   | 2.56                               | 500.00              | Complies    |
| 18      | 2440 MHz  | 1.18                   | 2.51                               | 500.00              | Complies    |
| 25      | 2475 MHz  | 1.58                   | 2.66                               | 500.00              | Complies    |

Note: All the test values were listed in the report.

For plots, only the channel with worse result was shown.

### 4.5. Radiated Emissions Measurement

#### 4.5.1. Limit

30dBc in any 100 kHz bandwidth outside the operating frequency band. In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Frequencies | Field Strength     | Measurement Distance |  |  |
|-------------|--------------------|----------------------|--|--|
| (MHz)       | (micorvolts/meter) | (meters)             |  |  |
| 0.009~0.490 | 2400/F(kHz)        | 300                  |  |  |
| 0.490~1.705 | 24000/F(kHz)       | 30                   |  |  |
| 1.705~30.0  | 30                 | 30                   |  |  |
| 30~88       | 100                | 3                    |  |  |
| 88~216      | 150                | 3                    |  |  |
| 216~960     | 200                | 3                    |  |  |
| Above 960   | 500                | 3                    |  |  |

### 4.5.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of spectrum analyzer and receiver.

| Spectrum Parameter                          | Setting                  |
|---|--------------------------|
| Attenuation                                 | Auto                     |
| Start Frequency                             | 1000 MHz                 |
| Stop Frequency                              | 10th carrier harmonic    |
| RBW / VBW (Emission in restricted band)     | 1 MHz / 3MHz for Peak,   |
|   | 1MHz / 1/T for Average   |
| RBW / VBW (Emission in non-restricted band) | 100kHz / 300kHz for peak |

| Receiver Parameter     | Setting                           |
|------------------------|-----------------------------------|
| Attenuation            | Auto                              |
| Start ~ Stop Frequency | 9kHz~150kHz / RBW 200Hz for QP    |
| Start ~ Stop Frequency | 150kHz~30MHz / RBW 9kHz for QP    |
| Start ~ Stop Frequency | 30MHz~1000MHz / RBW 120kHz for QP |

#### 4.5.3. Test Procedures

Configure the EUT according to ANSI C63.10. The EUT was placed on the top of the turntable 1.5
meter above ground. The phase center of the receiving antenna mounted on the top of a
height-variable antenna tower was placed 1m & 3m far away from the turntable.

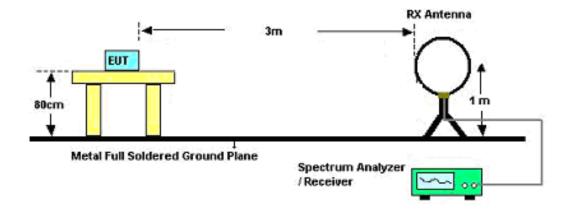

- 2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- 3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
- 4. For each suspected emissions, the antenna tower was scan (from 1 M to 4 M) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading.
- 5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
- 6. For emissions above 1GHz, use 1MHz VBW and 3MHz RBW for peak reading. Then 1MHz RBW and 1/T VBW for average reading in spectrum analyzer.
- 7. If the emissions level of the EUT in peak mode was 3 dB lower than the average limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method for below 1GHz.
- 8. For testing above 1GHz, the emissions level of the EUT in peak mode was lower than average limit (that means the emissions level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.
- 9. In case the emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver. High Low scan is not required in this case.

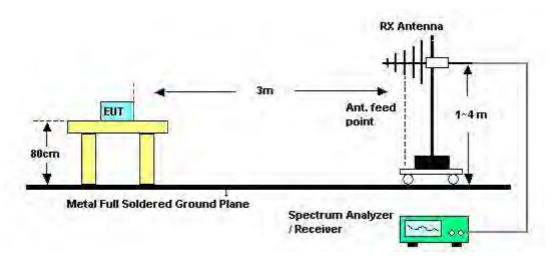

### 4.5.4. Test Setup Layout

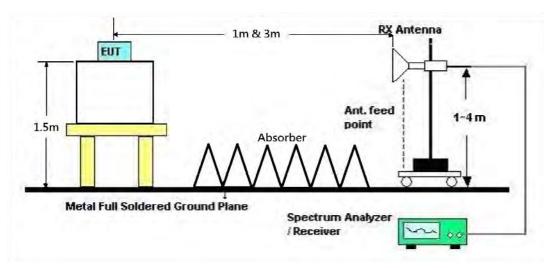

For Radiated Emissions: 9kHz ~30MHz

For Radiated Emissions: 30MHz~1GHz

For Radiated Emissions: Above 1GHz

Page No. : 28 of 51

Issued Date : Dec. 01, 2015

## 4.5.5. Test Deviation

There is no deviation with the original standard.

# 4.5.6. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

# 4.5.7. Results of Radiated Emissions (9kHz~30MHz)

| Temperature   | <b>25</b> ℃   | Humidity       | 55% |
|---------------|---------------|----------------|-----|
| Test Engineer | Stim Song     | Configurations | СТХ |
| Test Date     | Nov. 13, 2015 |                |     |

| Freq. | Level  | Over Limit | Limit Line | Remark   |
|-------|--------|------------|------------|----------|
| (MHz) | (dBuV) | (dB)       | (dBuV)     |          |
| -     | -      | -          | -          | See Note |

#### Note:

The amplitude of spurious emissions that are attenuated by more than 20 dB below the permissible value has no need to be reported.

Distance extrapolation factor = 40 log (specific distance / test distance) (dB);

Limit line = specific limits (dBuV) + distance extrapolation factor.

### Note:

The amplitude of spurious emissions that are attenuated by more than 20dB below the permissible value has no need to be reported.

Emission level (dBuV/m) =  $20 \log Emission$  level (uV/m).

Corrected Reading: Antenna Factor + Cable Loss + Read Level - Preamp Factor = Level.

Page No. : 38 of 51

Issued Date : Dec. 01, 2015

### 4.6. Emissions Measurement

#### 4.6.1. Limit

30dBc in any 100 kHz bandwidth outside the operating frequency band. In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Field Strength     | Measurement Distance  |  |  |
|--------------------|---|--|--|
| (micorvolts/meter) | (meters)  |  |  |
| 2400/F(kHz)        | 300   |  |  |
| 24000/F(kHz)       | 30  |  |  |
| 30                 | 30  |  |  |
| 100                | 3   |  |  |
| 150                | 3   |  |  |
| 200                | 3   |  |  |
| 500                | 3   |  |  |
|                    | Field Strength (micorvolts/meter)  2400/F(kHz)  24000/F(kHz)  30  100  150  200 |  |  |

## 4.6.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter                                  | Setting                    |
|---|----------------------------|
| Attenuation   | Auto                       |
| Span Frequency                                      | 100 MHz                    |
| RBW / VBW (Emission in restricted band)             | 1MHz / 3MHz for Peak,      |
|   | 1MHz / 1/T for Average     |
| RBW / VBW (30dBc in any 100 kHz bandwidth emission) | 100 kHz / 300 kHz for Peak |

## 4.6.3. Test Procedures

For Radiated band edges Measurement:

1. The test procedure is the same as section 4.5.3.

### For Radiated Out of Band Emission Measurement:

 Test was performed in accordance with KDB558074 D01 v03r03 for Performing Compliance Measurements on Digital Transmission Systems (DTS) Operating Under §15.247 section 10.1 Unwanted Emissions into Non-Restricted Frequency Bands Measurement Procedure.

 Report Format Version: Rev. 01
 Page No. : 39 of 51

 FCC ID: YAW513407
 Issued Date : Dec. 01, 2015

# 4.6.4. Test Setup Layout

## For Radiated band edges Measurement:

This test setup layout is the same as that shown in section 4.5.4.

## For Radiated Out of Band Emission Measurement:

This test setup layout is the same as that shown in section 4.5.4.

## 4.6.5. Test Deviation

There is no deviation with the original standard.

## 4.6.6. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

# 4.6.7. Test Result of Band Edge and Fundamental Emissions

## 4.7. Antenna Requirements

#### 4.7.1. Limit

Except for special regulations, the Low-power Radio-frequency Devices must not be equipped with any jacket for installing an antenna with extension cable. An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited. Further, this requirement does not apply to intentional radiators that must be professionally installed.

### 4.7.2. Antenna Connector Construction

Please refer to section 3.3 in this test report; antenna connector complied with the requirements.
