

Operational Description

Description of Transmitter: EUT is the FM transmitter. It mainly consists of Q2, capacitance and inductance. The surge circuit magnified through Q2, inductance and audio output jack connected with ground. The audio cable instead of antenna to transmit.. Audio signal input through resistance, capacitance which compose the RC rejector circuit, through coupling capacitance and Q2's pole.. Transmitter has wireless headphone and wireless chatting function. The power can be supplied by 2*AAA battery.
