

XIN LAN ZHONG CHEN ELECTRONIC FACTORY

CIRCUIT DESCRIPTION

Model No: NHM-1065 (RX)

1. RX Snake according to batteries sign fit on battery ("LR03 AAA" 1.5V X 4 PCS), electrical source switch dial to left (ON), RX snake will work begin.

2. ANT1 receipt from TX high frequency carrier wave signal by L2 、 C18 high expand duct Q3 magnify, after magnify high frequency carrier by C10 to T1, from T1 、 Q1 、 L3 and periphery organ composition rebirth surge circuit and Q3 after magnify export high frequency carrier wave signal bring resonance, at one time go along demodulation, from demodulation export pulse signal by R4/C6 to U1's (RS-2) third feet go along decode, decode frequency from outer meet resistance R22 and R9 accommodate, after decode pulse signal from U1's tenth feet and seventh feet export ,to Q2 and Q4 drive left and right motors work, implement snake go along 、 left 、 right and "S" model motion.
