

April 18, 2011

Dear Application Examiner:

OEM Controls, Inc is submitting this application for the original certification of their Zigbee radio product, Model ST-570 RFID Cube, FCC ID: YD7-ST570RFID. FCC certification is sought under FCC 15.247 as a DTS device.

The ST-570 RFID Cube will only be used 20cm or greater from users and can be classified as a mobile device per FCC 2.1091.

The ST-570 RFID Cube is designed to be vehicle mounted and is self powered through an internal battery. Thus, no provision for connection to the AC mains either directly, or indirectly from another device is required. Thus, no AC power line data was taken.

The radio utilizes an internal F type antenna which is actually part of the product's PCB ground-plane. Thus, it is permanently mounted and cannot be removed. Please refer to the antenna info for more information. This configuration satisfies the requirements of 47 CFR 15.203.

The technical reports and exhibits demonstrate compliance with FCC rules 47 CFR 15.247 as a DTS transmitter.

Your efforts in reviewing this application are greatly appreciated.

Best regards,

A handwritten signature in black ink, appearing to read "Paul Rohaly".
