RE: FCC ID: YETCELEFI-RS240WU, EA272711
Correspondence Reference Number: 41080

Attention: Jyun-Cheng Chen

Please find our response to your question on this application below in [blue](#):

- 1) Please verify and confirm the 5.2 GHz frequency listing I added in the NII filing on your behalf.
 - a. [Verified and confirmed.](#)
- 2) Your arguments on ATPC and uniform channel usage are acceptable.
 - a. [Noted](#)
- 3) The confidentiality request letter asks for BOMs, however the parts list and tune-up procedure exhibit currently is empty with the NII filing (complete with the TNB filing).
 - a. [We have uploaded the parts list and tune up procedure exhibits for the Part 15 filing. Please note it was our understanding, based on section 2.1033\(b\) of the FCC rules that these items are not required for a Part 11, 15 or 18 filing which is why they were not uploaded originally with this filing. They were uploaded with the part 27 filing per section 2.1033\(c\) and thus the request that they be held confidential.](#)
- 4) Please add RF exposure warning message (separation distance) in the user's manual. Both uplink and downlink should be considered active at the same time when suggesting such a distance in the manual.
 - a. [A revised user manual with the RF exposure warning has been uploaded \(refer to file "420N003-002-001-10R51_FCCpending.pdf"\)](#)

Regards,

David W. Bare
