

The equipment under test (EUT) is the XBOX UDRAW GAME TABLET Unit of a 2.4GHz transceiver with FHSS technique operating at 2.402GHz - 2.482GHz. It is powered by 4.5Vdc (3 X 1.5Vdc AA Batteries).

**Modulation Type: GFSK**

**Antenna Type: Integral antenna**

The functions of main Components are mentioned as below.

- 1) U1 acts as 2.4G RF Chip.
- 2) U2 acts as 2.4G RF flash ROM.
- 3) U3 acts as MCU.
- 4) U4 acts as a capacitance sensor chip, when the stylus or have is near to the detectable zone of the device, the capacitance of the concerned area will be changed and the capacitance sensor chip will complies the style or hand location.
- 5) U5 acts as Touch panel control part.
- 6) A3 act as 3D G-Sensor chip, quantify the acceleration data of "X, Y, Z" directions and converts the data to voltage value.
- 7) Y1 is used to generate 12MHz carrier to MCU.
- 8) XTAL1 is used to generate 12MHz carrier to RF Chip.
