The functions of main ICs are mentioned as below.

- 1) U5 acts as MCU, it processes the input data from the game player, and collects the game player data such as pressing the button, touching the panel, drawing, gesture and acceleration etc and sends this information to 2.4G RF module.
- 2) U4 acts as a capacitance sensor chip. When the stylus or hand is near to the detectable zone of the device, the capacitance of the concerned area will be changed, the capacitance sensor chip will comply the style or hand location.
- 3) I3 acts as a 3D G-Sensor chip, it will quantify the acceleration data of the X, Y and Z directions and converts the data to voltage value.
- 4) T2 acts as power regulator.
- 5) U7 acts as RF module, included internal RF chip.
- 6) U1 acts 2.4 RF Chip.
- 7) X1 acts as 16MHz oscillator for U1.
