

To Whom it may concern:

The SBDK BLE Module (BLEM) will support three different tool SKU's. The PCB, electronic components, radio & antenna circuitry are identical for every SKU. The only differences are mechanically in the wiring harness that connects the BLEM to our internal motor control module. We have 3 different styles of connectors depending on what is being connected to:

DCF888 – N463400(01)  
-----

BLEM has 1 wire connection:

Connection from BLEM to Motor Controller

DCD792/797 – N471440(02)

---

BLEM has 2 sets of wire connections:  
Connection from BLEM to Motor Controller  
Connection from BLEM to LED

DCD792/797 – N474045(03)

---

BLEM has 3 sets of wire connections:  
Connection from BLEM to Motor Controller  
Connection from BLEM to LED  
Connection from BLEM to Clutch Sensor
