

ADC-200T-EVD-IS contains a low power transceiver used for communicating with other devices compliant to IEEE 802.15.4. The transceiver uses the unlicensed Short-Range Device (SRD) frequency bands and is controlled by a CPU onboard the ADC-200T-EVD-IS.

This device adds control and status capabilities to home control and home security and is equipped with a 915Mhz whip antenna (81.9mm) for the transceiver.

ADC-200T-EVD-IS requires power from the host equipment in the range of 6 to 12VDC.
