

Temperature Sensor

Product Manual

Box Contents:

- Temperature Sensor
- CR123 Battery
- Nail
- Double-sided Adhesive Tape

Installation

For optimal performance install the Temperature Sensor approximately 5 feet above the floor of an interior wall. Avoid installing the Temperature Sensor on an exterior wall, in areas that are close to heating or cooling vents, and areas that are exposed to direct sunlight. The Temperature Sensor is designed for indoor use only.

1. Remove the battery tab from the Temperature Sensor.
2. Mount the Temperature Sensor on the wall using the nail or double-sided adhesive tape provided.

Adding the Temperature Sensor to the Network

To add the Temperature Sensor, first install the panel and place all other Z-Wave devices in their final locations. Next put the panel into Add Mode. You can do this by completing the following steps:

1. If installing other Z-Wave devices, make sure to install and add them to the network first. After you have added all other Z-Wave devices to the network:
 - i. Run a Network Rediscovery.
 - ii. Verify that the Link Quality for all devices is good.
2. Ensure the panel and the Remote Temperature Sensors are in their final locations.
3. Navigate to the Equipment List page on the Dealer Website or in MobileTech.
4. Select emPower Management.
5. Select Add Z-Wave Devices.
6. Wait for the bolded message "Checking for new devices on the network"

Once the panel is in Add Mode, press the Pairing button on the Temperature Sensor to add it to the Z-Wave network. You will see the light on the Temperature Sensor turn solid white when it has been successfully added, and you also will see the device appear on MobileTech.

Troubleshooting

If the Temperature Sensor is not communicating with the panel

1. If the Temperature Sensor is not communicating with the panel, try deleting it from the network and then add it again.
2. If Step 1 does not solve the issue, we recommend installing a Z-Wave Repeater nearby, then trying again.

Note: Any wall powered Z-Wave devices will act as Repeaters and improve communication between the panel and the Z-Wave device you are installing.

Deleting the Temperature Sensor (removing it from the network)

TIP: For best results, we recommend having the panel in the same room as the device you are deleting.

To delete the Temperature Sensor put the panel into Delete Mode. You can do this by completing the following steps:

1. Install the MobileTech App (if not already done) and select the customer.
2. Navigate to the Equipment List page.
3. Select emPower Management.
4. Select Delete Z-Wave Devices
5. Wait for the bolded message "Checking for deleted devices on the network."

Once the panel is in Delete Mode press the Pairing button on the Temperature Sensor to delete it from the Z-Wave network. The light on the Temperature Sensor will start flashing to indicate it has been successfully deleted, and you will also see confirmation on MobileTech.

Notices

FCC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference, received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

ISED

This device contains license-exempt transmitters(s)/ receiver(s) that comply with Innovation, Science and Economic Development Canada's license-exempt RSS(s). Operation is subject to the following two conditions:

1. This device may not cause interference.
2. This device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil contient des émetteurs/récepteurs exemptés de licence conformes à la norme Innovation, Sciences, et Développement économique Canada. L'exploitation est autorisée aux deux conditions suivantes:

1. L'appareil ne doit pas produire de brouillage.
2. L'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.
