**Statement on product subject to FCC approval**

Date: April 5<sup>th</sup>, 2011

Subject: Statement for Certification for FCC ID: YLF-ABG-EYE-APU2

**Statement**

No changes have been made to the EUT previously approved as YLF-2010-08-APU2. See test report 12 SGS Test Report reference number 257245-4 Oct 29, 2010. Test Report (257245) accurately represents test results under the new conditions.

YLF-2010-08-APU2 approved design includes also a transceiver circuit (TI CC2500) for passively monitoring radio spectrum for spectrum analysis purposes. It has been ensured in product design that this circuit does not transmit anything in any conditions.

802.11a functionality has been enabled for the same hardware as earlier approved by FCC. This functionality has been enabled with a software change with no impact to previously approved functionalities.

Sincerely,

By:

Veli-Pekka Ketonen  
CTO
