### 1.3 LS Research, LLC TEST FACILITY

LS Research, LLC is accredited by A2LA (American Association for Laboratory Accreditation) to conform to ISO/IEC 17025, 2005 "General Requirements for the Competence of Calibration and Testing Laboratories".

LS Research, LLC's scope of accreditation includes all test methods listed herein, unless otherwise noted. A copy of the accreditation may be accessed on our web site: [www.lsr.com](http://www.lsr.com). Accreditation status can be verified at A2LA's web site: [www.a2la2.net](http://www.a2la2.net).

### 1.4 LOCATION OF TESTING

All testing was performed at LS Research, LLC, W66 N220 Commerce Court, Cedarburg, Wisconsin, 53012 USA, utilizing the facilities listed below, unless otherwise noted.

List of Facilities Located at LS Research, LLC:

- Compact Chamber
- Semi-Anechoic Chamber
- Open Area Test Site (OATS)

### 1.5 TEST EQUIPMENT UTILIZED

A complete list of equipment utilized in testing is provided in Appendix A of this test report. Calibration dates are indicated in Appendix A. All test equipment is calibrated in accordance with A2LA standards.

Prepared For:Ecolab	EUT: Hand Hygiene Badge	LS Research, LLC
Report #310193	Model #:BGE1PT	Template: 15.249 8-11-2010

## EXHIBIT 2. PERFORMANCE ASSESSMENT

### 2.1 CLIENT INFORMATION

<b>Manufacturer Name:</b>	<b>Ecolab</b>
<b>Address:</b>	<b>655 Lone Oak Drive F6, Eagan MN 55121</b>
<b>Contact Name:</b>	<b>Cheryl Littau</b>

### 2.2 EQUIPMENT UNDER TEST (EUT) INFORMATION

*The following information has been supplied by the applicant.*

<b>Product Name:</b>	Hand Hygiene Badge
<b>Model Number:</b>	BGE1PT
<b>Serial Number:</b>	10240120

### 2.3 ASSOCIATED ANTENNA DESCRIPTION

The antennas used in this device are a Johanson 900 MHz ceramic chip antenna (P/N 0915AT43A0026) and a Toko low frequency 3-axes coil antenna (P/N 1085BAN-2047). The Toko antenna is used for low frequency receive function.

## 2.4 EUT'S TECHNICAL SPECIFICATIONS

### Additional Information:

EUT Frequency Range (in MHz)	906.4 MHz to 921.6 MHz
RF Power in Watts	
Minimum:	0.00046 Watts
Maximum:	0.00058 Watts
Field Strength at 3 meters	92.9 dB $\mu$ V/m at 906.4 MHz
Occupied Bandwidth	126.5 kHz
Type of Modulation	GFSK
Emission Designator	127KF1D
EIRP (in mW)	0.585 mW
Transmitter Spurious (worst case) at 3 meters	47.0 dB $\mu$ V/m at 5529.6 MHz
Stepped (Y/N)	No
Step Value:	N/A
Frequency Tolerance %, Hz, ppm	Better than 100 ppm
Microprocessor Model # (if applicable)	CC430F5137
Antenna Information	
Detachable/non-detachable	Non-detachable
Type	Ceramic chip antenna
Gain (in dBi)	-1.0 dBi ( Data Sheet)
EUT will be operated under FCC Rule Part(s)	15.249
EUT will be operated under RSS Rule Part(s)	RSS 210
Modular Filing	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Portable or Mobile?	Portable

## 2.5 PRODUCT DESCRIPTION

The Ecolab Hand Hygiene Badge is a badge assigned to individual hospital employees to be worn along with their hospital ID in order to monitor hand hygiene performance. The Hand Hygiene Badge incorporates a 900 MHz transceiver and a low frequency (134 kHz) radio receiver for the purpose of relaying data.

**EXHIBIT 3. EUT OPERATING CONDITIONS & CONFIGURATIONS DURING TESTS**

**3.1 CLIMATE TEST CONDITIONS**

Temperature:	71° F
Humidity:	42 %
Pressure:	751 mmHg

**3.2 APPLICABILITY & SUMMARY OF EMC EMISSION TEST RESULTS**

FCC and IC Paragraph	Test Requirements	Compliance (yes/no)
FCC : 15.207 IC : RSS GEN sect. 7.2.2	Power Line Conducted Emissions Measurements	N/A
IC : RSS GEN section 4.6.1	20 dB Bandwidth	YES
FCC : 15.249(A) & 1.1310 IC : RSS 210 A2.9 (a)	Maximum Output Power	YES
FCC : 1.1307, 1.1310, 2.1091 & 2.1093 IC : RSS 102	RF Exposure Limit	YES
FCC : 15.249(a) IC : RSS 210 A2.9(a)	Transmitter harmonics	YES
FCC : 15.249(d), 15.209 & 15.205 IC : RSS 210 A2.9(b),	Transmitter Radiated Emissions	YES

*The digital circuit portion of the EUT has been tested and verified to comply with FCC Part 15, Subpart B, Class B Digital Devices (RSS GEN and RSS 210 of IC) and the associated Radio Receiver has also been tested and found to comply with Part 15, Subpart B – Radio Receivers (RSS GEN and RSS 210 of IC). The Receiver Test Report is available upon request.*

**3.3 MODIFICATIONS INCORPORATED IN THE EUT FOR COMPLIANCE PURPOSES**

None  Yes (explain below)

The power level of the transmitter was set to setting 3A

**3.4 DEVIATIONS & EXCLUSIONS FROM TEST SPECIFICATIONS**

None  Yes (explain below)

Prepared For:Ecolab	EUT: Hand Hygiene Badge	LS Research, LLC
Report #310193	Model #:BGE1PT	Template: 15.249 8-11-2010
LSR Job #:C-943	Serial #:10240120	<b>Page 9 of 34</b>

## EXHIBIT 4. DECLARATION OF CONFORMITY

The EUT was found to MEET the requirements as described within the specification of FCC Title 47, CFR Part 15.249, and Industry Canada RSS-210, Annex 2.9.

If some emissions are seen to be within 3 dB of their respective limits:

As these levels are within the tolerances of the test equipment and site employed, there is a possibility that this unit, or a similar unit selected out of production may not meet the required limit specification if tested by another agency.

LS Research, LLC certifies that the data contained herein was taken under conditions that meet or exceed the requirements of the test specifications. The results in this Test Report apply only to the item(s) tested on the above-specified dates. Any modifications made to the EUT subsequent to the indicated test date(s) will invalidate the data herein, and void this certification.

Prepared For: Ecolab	EUT: Hand Hygiene Badge	LS Research, LLC

LSR Job #: C-943	Serial #: 10240120	<b>Page 10 of 34</b>

## EXHIBIT 5. RADIATED EMISSIONS TEST

### 5.1 Test Setup

The test setup was assembled in accordance with Title 47, CFR FCC Part 15, RSS GEN and ANSI C63.4. The EUT was placed on an 80cm high non-conductive pedestal, centered on a flush mounted 2-meter diameter turntable inside a 3 meter Semi-Anechoic, FCC listed Chamber. The EUT was operated in continuously transmitting modulated mode using power as provided by a battery. The unit has the capability to operate on 3 channels, controllable using shorting pins.

The applicable limits apply at a 3 meter distance. Measurements above 3 GHz were performed at a 1.0 meter separation distance. The calculations to determine these limits are detailed in the following pages. Please refer to Appendix A for a complete list of test equipment. The test sample was operated on one of four (3) standard channels: **906.4 MHz, 913.8 MHz and 921.6 MHz** to comply with FCC Part 15.35.

### 5.2 Test Procedure

Radiated RF measurements were performed on the EUT in a 3 meter Semi-Anechoic, FCC listed Chamber. The frequency range from 30 MHz to 10000 MHz was scanned and investigated. The radiated RF emission levels were manually noted at the various fixed degree settings of azimuth on the turntable and antenna height. The EUT was placed on a non-conductive pedestal in the 3 meter Semi-Anechoic Chamber, with the antenna mast placed such that the antenna was 3 meters from the EUT. A Biconical Antenna was used to measure emissions from 30 MHz to 300 MHz, and a Log Periodic Antenna was used to measure emissions from 300 MHz to 1000 MHz. A Double-Ridged Waveguide Horn Antenna was used from 1 GHz to 10 GHz.

In the frequency range of 30 MHz to 3 GHz, the maximum radiated RF emissions were found by raising and lowering the antenna between 1 and 4 meters in height while for the range of 3 GHz to 10 GHz the antenna was raised and lowered between 1 and 1.8 meters in height. In addition, the polarity of the antenna was switched between horizontal and vertical polarity.

The EUT was positioned in three orthogonal positions for the test.

Battery Voltage was periodically checked to ensure sufficient supply.

Report #310193	Model #:BGE1PT	Template: 15.249 8-11-2010
LSR Job #:C-943	Serial #:10240120	<b>Page 11 of 34</b>

### 5.3 Test Equipment Utilized

A list of the test equipment and antennas utilized for the Radiated Emissions test can be found in Appendix A. This list includes calibration information and equipment descriptions. All equipment is calibrated and used according to the operation manuals supplied by the manufacturers. All calibrations of the antennas used were performed at an IEC/ISO 17025 accredited calibration laboratory, traceable to the SI standard. In addition, the Connecting Cables were measured for losses using a calibrated Signal Generator and an EMI Receiver. The resulting correction factors and the cable loss factors from these calibrations were entered into the EMI Receiver database. As a result, the data taken from the EMI Receiver accounts for the antenna correction factor as well as cable loss or other corrections, and can therefore be entered into the database as a corrected meter reading. These correction factors are loaded onto the EMI receiver when measurements are performed.

Reported Measurement data = Raw receiver measurement (dB $\mu$ V/m) + Antenna correction Factor + Cable factor (dB) + Miscellaneous factors when applicable (dB) – amplification factor when applicable (dB).

The EMI Receiver was operated with resolution bandwidths as prescribed in ANSI C63.4.

### 5.4 Test Results

The EUT was found to **MEET** the Radiated Emissions requirements of Title 47 CFR, FCC Part 15.249 and Canada RSS-210, Annex 2.9. The frequencies with significant RF signal strength were recorded and plotted as shown in the Data Charts and Graphs.

Prepared For:Ecolab	EUT: Hand Hygiene Badge	LS Research, LLC
Report #310193	Model #:BGE1PT	Template: 15.249 8-11-2010
LSR Job #:C-943	Serial #:10240120	<b>Page 12 of 34</b>

**5.5 SAMPLE CALCULATION OF RADIATED EMISSIONS LIMITS AND REPORTED DATA**

**Reported data:**

For both fundamental and spurious emissions measurement, the data reported includes all necessary correction factors. These correction factors are loaded onto the EMI receiver when measurements are performed.

Reported Measurement data = Raw receiver measurement (dBµV/m) + Antenna correction Factor + Cable factor (dB) + Miscellaneous factors when applicable (dB) – amplification factor when applicable (dB).

**Field Strength of Fundamental Frequencies:**

The fundamental emissions for an intentional radiator in the 902-928 MHz band, operating under FCC part 15.249 and RSS 210 A2.9 limits, must have electric field strength of no greater than 50 mV/m, for the fundamental frequency, when measured at 3 meters, and harmonic field strength of no greater than 500 µV/m, when measured at 3 meters. Spurious emissions outside the 902-928 MHz band shall be attenuated by at least 50 dB below the level of the fundamental, or meet the limits expressed in FCC part 15.209 under general emission limits.

**Field Strength of Fundamental Frequencies is Limited to 50,000 µV/m, or 94 dBµV/m.**

**Field Strength of Harmonic and Spurious Frequencies is Limited by FCC 15.249 a and d**

The harmonic limit of –50 dBc with respect to the fundamental limit would be:

$$94 \text{ dB}\mu\text{V/m} - 50 \text{ dB} = 44 \text{ dB}\mu\text{V/m},$$

\*with the exception of where FCC 15.209\* allows for a higher limit to be used.

Frequency (MHz)	3 m Limit (µV/m)	3 m Limit (dBµV/m)
902-928	50,000	94.0
30-88 ; 88-216	159	44.0
216-902 ; 928-960	500	46.0*
960-40,000	500	54.0*

The following table depicts the general radiated emission limits obtained from Title 47 CFR, part 15.209a, for radiated emissions measurements, including restricted band limits as expressed in 47 CFR, part 15.205.

Frequency (MHz)	3 m Limit (µV/m)	3 m Limit (dBµV/m)
30-88	100	40.0
88-216	150	43.5
216-960	200	46.0
960-40,000	500	54.0

**Sample conversion from field strength µV/m to dBµV/m:**

$$\text{dB}\mu\text{V/m} = 20 \log_{10} (3\text{m limit})$$

30 - 88 MHz example:  $\text{dB}\mu\text{V/m} = 20 \log_{10} (100)$

$$40.0 \text{ dB}\mu\text{V/m} = 20 \log_{10} (100)$$

Prepared For:Ecolab	EUT: Hand Hygiene Badge	LS Research, LLC
Report #310193	Model #:BGE1PT	Template: 15.249 8-11-2010
LSR Job #:C-943	Serial #:10240120	<b>Page 13 of 34</b>

902-928 MHz example:                     $=20 \log_{10} (50000/1)$   
   $=93.98 \text{ dB}\mu\text{V/m}$

**For measurements made at 1 meter, a 9.5 dB correction may be invoked.**

960 MHz to 40,000 MHz  
500  $\mu\text{V/m}$  or 54.0  $\text{dB}\mu\text{V/m}$  at 3 meters  
54.0 + 9.5 = 63.5  $\text{dB}\mu\text{V/m}$  at 1 meter

**Generic example of reported data at 200 MHz:**

Reported Measurement data = 18.2 (raw receiver measurement ) + 15.8 (antenna factor) + 1.45 (cable factor)  
= 35.45 ( $\text{dB}\mu\text{V/m}$ ).

Vertical	9216.0	49.2	37.3	63.5	26.2	99.4	10	V

Notes:

- 1) A Peak Detector was used in measurements above 1 GHz, for average measurement, the peak detector was used with lower VBW. The peak detector was used to ensure the peak emissions did not exceed 20 dB above the limits.
- 2) Measurements above 3 GHz were made at 1 meter of separation from the EUT.
- 3) Measurement at receiver system noise floor.

LSR Job #: C-943	Serial #: 10240120	<b>Page 16 of 34</b>

The following table depicts the level of significant spurious radiated RF emissions (other than harmonics) found:

FREQ (MHz)	ANT	EUT	HEIGHT (m)	AZIMUTH (°)	PEAK (dBµv/m)	Q.PEAK (dBµv/m)	AVERAGE (dBµv/m)	LIMIT (dBµv/m)	MARGIN (dB)
997.43	H	F	1.00	0	35.0	29.8	23.2	54.0	24.2
984.31	V	F	1.00	0	34.5	28.7	22.1	54.0	25.3
791.60	H	F	1.00	0	33.0	26.9	20.3	46.0	19.1
752.80	V	F	1.00	0	32.1	26.1	19.5	46.0	19.9
293.34	H	V	1.00	0	30.7	24.7	18.2	46.0	21.3
194.99	V	V	1.00	0	22.8	17.3	11.4	43.0	25.7

Note:

1. H = Horizontal, V = Vertical, F= Flat.
2. Data listed above are measurements of the system noise floor.
3. There were no spurious emissions detected above the noise floor.

## 5.8 Screen Captures - Radiated Emissions Test

These screen captures represent Peak Emissions. For radiated emission measurements, a Quasi-Peak detector function is utilized when measuring frequencies below 1 GHz, and a peak detector with video averaging is utilized when measuring frequencies above 1 GHz.

The signature scans shown here are from worst-case emissions, as measured on channels low, middle and high, with the sense antenna both in vertical and horizontal polarity for worst case presentations.

## EXHIBIT 7. OCCUPIED BANDWIDTH:

### 7.1 Limits

There are no limits specified. The occupied bandwidth need only be reported.

### 7.2 Method of Measurements

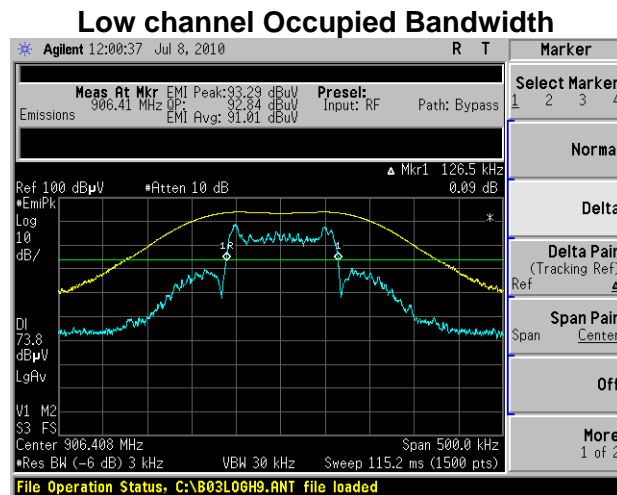

This test was performed radiated in a 3-meter semi-anechoic chamber. The resolution bandwidth was set such that it was greater than the occupied bandwidth. This maximum value for the fundamental was then used as reference for 20dBc.

The resolution bandwidth was then set to a value that was greater than or equal to 1% of the bandwidth. Using the 20dBc, marker, the bandwidth was measured.

### 7.3 Test Data

Center Frequency (MHz)	Measured -20 dBc Occ.Bw (kHz)
906.4	126.5
913.8	126.2
921.6	126.5

### 7.4 Screen Captures - OCCUPIED BANDWIDTH

LSR Job #: C-943	Serial #: 10240120	<b>Page 25 of 34</b>

## EXHIBIT 8. BAND-EDGE MEASUREMENTS

### 8.1 Method of Measurements

FCC 15.209(b) and 15.249(d) require a measurement of spurious emission levels to be at least 50 dB lower than the fundamental emission level, in particular at the Band-Edges where the intentional radiator operates. Also, RSS 210 Section 2.2 requires that unwanted emissions meet limits listed in tables 2 and 3 of the same standard and also to the limits in the applicable annex. The following screen captures demonstrate compliance of the intentional radiator at the 902-928 MHz Band-Edges. The EUT was operated in continuous transmit mode with continuous modulation, with internally generated data as the modulating source. The EUT was operated at the lowest channel for the investigation of the lower Band-Edge, and at the highest channel for the investigation of the higher Band-Edge.

Screen Capture Demonstrating Compliance at the **Band-Edges**

Prepared For: Ecolab	EUT: Hand Hygiene Badge	LS Research, LLC
Report #310193	Model #: BGE1PT	Template: 15.249 8-11-2010
LSR Job #: C-943	Serial #: 10240120	<b>Page 26 of 34</b>

## EXHIBIT 9. FREQUENCY & POWER STABILITY OVER VOLTAGE VARIATIONS

The stability of the device was examined as a function of the input voltage available to the EUT. A Spectrum Analyzer was used to measure the frequency at the appropriate frequency markers.

In this case, the EUT is powered via batteries. Therefore, using a variable DC power supply, the voltage was varied by - 15%.

A spectrum analyzer was used to measure the frequency at the appropriate frequency markers. For this test, the EUT was placed in continuous transmit CW mode.

Channel	3.0 VDC		2.55 VDC		Deviation (Hz)	Deviation (dBm)
	Frequency (Hz)	Power (dBm)	Frequency (Hz)	Power (dBm)		
Low	906408440	-4.6	906408210	-5.0	230	0.3
Middle	913806350	-6.2	913806320	-6.5	30	0.3
High	921604500	-4.9	921604550	-5.2	50	0.4

The power was then cycled On/Off to observe system response. No unusual response was observed, the emission characteristics were well behaved, and the system returned to the same state of operation as before the power cycle.

**No anomalies were noted in the measured transmit power and the frequency stability was better than 100 ppm during the voltage variation tests.**

**APPENDIX C**  
**Uncertainty Statement**

This uncertainty represents an expanded uncertainty expressed at approximately the 95 % confidence level, using a coverage factor of k=2.

*Table of Expanded Uncertainty Values, (K=2) for Specified Measurements*

Measurement Type	Particular Configuration	Uncertainty Values
Radiated Emissions	3 – Meter chamber, Biconical Antenna	4.24 dB
Radiated Emissions	3-Meter Chamber, Log Periodic Antenna	4.8 dB
Radiated Emissions	10-Meter OATS, Biconical Antenna	4.18 dB
Radiated Emissions	10-Meter OATS, Log Periodic Antenna	3.92 dB
Conducted Emissions	Shielded Room/EMCO LISN	1.60 dB
Radiated Immunity	3 Volts/Meter in 3-Meter Chamber	1.128 Volts/Meter
Conducted Immunity	3 Volts level	1.0 V

### Antenna Specification(s)

# "High Frequency Ceramic Solutions"

**915 MHz Antenna**

**P/N 0915AT43A0026**

Detail Specification: 02/20/09

Page 1 of 3

**General Specifications**

Part Number	0915AT43A0026
Frequency Range	902 - 928
Peak Gain	-1.0 dBi typ. (XZ-total)
Average Gain	-4.0 dBi typ. (XZ-total)
Return Loss	8.5 dB min.
Impedance	50 Ω
Input Power	2W max.

Operating Temperature	-40 to +85°C
Storage Temperature Range	+5~+35°C, Humidity 45~75%RH
Reel Quantity	1,000

No.	Function	Terminal Configuration
1	Feeding Point	
2	NC	

**Mechanical Dimensions**

	In	mm
L	0.276 ± 0.008	7.00 ± 0.20
W	0.079 ± 0.008	2.00 ± 0.20
T	0.031 +.004/-0.008	0.80 +0.1/-0.2
a	0.020 ± 0.012	0.50 ± 0.30

**Mounting Considerations**

Mount these devices with brown mark facing up. Units: mm

\* Line width should be designed to provide 50 Ω impedance matching characteristics.
