Confidentiality Homologation

Dear Sir,

We request American Certification Body Inc. that internal photos be held confidential. Our request is based on exceptional characteristic of our product as explained below:

030164 and 030165 products are sensors used in automotive tires/wheels assembly, therefore installed by designated technicians. Those products are inaccessible to general public.

Furthermore 030164 and 030165 products are totally potted with PU. That is a polymer whose hardness level is equal to 60 Shore A. The circuit board would be damaged if PU would be removed.

Accordingly we think that confidentiality about internal photos be granted.

With best regards,

ALLIGATOR Ventilfabrik GmbH
