Preparing Your Phone

1. Installing SIM Card

- Please keep your SIM card away from reach of children.
- Scratches and bends can easily damage the SIM card. Please be extra careful when installing, removing, handling or storing your SIM card.
- Before installing or removing the SIM card, make sure the phone is switched OFF, and then remove the back cover and battery.

1. Slide the back covers upward the bottom of the phone until it can be removed.
2. Remove the battery (see Removing Battery).
3. Place SIM cad into the SIM holder.

4. Fit the battery with the metallic contacts at the right bottom corner.
5. Replace the back cover by fitting it to the back of the phone.

2. Install Battery

- (1) Connect the battery's metal touch points separately with the battery compartment metal touch points, and enter the battery base to the slot.
- (2) Slide the back cover toward the top of the phone to lock the cover into its place.

3. Remove Battery

Remove the back cover then push toward the bottom of the phone and lift the battery at the top side center to remove.

- Settings and data stored in the phone or SIM card may be lost after the battery is removed.

4.. Charge Battery

Connect the charger to power supply, and then insert the charger pin into the I/O jack.

Note:

1. When charging, DO NOT remove or take out the battery to avoid the battery circuit to burn out.
2. While charging, it is normal that the phone and charger will become hot.
3. If the battery is completely empty, it may take a period of time before the charging icon appears on the display.

5.. USB Management

When USB cable plugged in, the USB charger function will startup. If there is a memory card inside the phone, the popup dialog box will ask you reboot the phone to used as a USB Flash Disk or not.

6. Power on and off

Press and hold Power key to turn on/off the phone.
And if you have set PIN or phone code, input it correctly.

7. Security Code

PIN Code

The PIN (Personal Identification Number) code protects your SIM cards against unauthorized use. It is normally supplied with the SIM card package. Be careful while entering PIN code,

3 wrong tries in entering PIN code will block the SIM from use, requiring input of PUK code to unblock. Please contact your operator for further details.

PIN2 Code

The PIN2 code is required when activating certain special features (such as call costs and fixed dialing). It is normally supplied with the SIM card package. Be careful while entering PIN2 code, 3 wrong tries in entering PIN2 code will block the SIM from use, requiring input of PUK2 code to unblock. Please contact your operator for further details.

PUK Code

The PUK (Personal Unblocking Key) code is required to unblock a blocked PIN code. It is normally supplied with the SIM package; otherwise contact your service provider for the code. Keep your PUK code in a safe place, do not throw it away. Contact your service provider if it is lost.

If your SIM is blocked, your phone will ask you to enter PUK code to unblock. You have 10 tries to enter the right PUK code, after which your SIM might be permanently blocked.

Phone Password

The Phone Code is a 4 to 8 digit security code that protects unauthorized use of your phone.

The factory default code is "0000". Once activated, the phone will ask you to enter Phone code every time it is turned on. For your protection, change the default phone code as soon as possible.

Do not forget your phone password.

Call functions

1. Making a Call

Make a domestic call

Enter the phone number including the area code. Press the SIM1/SIM2 send key to make a call.

viz.: area code—telephone exchange numbers—P—extension numbers, then press SIM1/SIM2 send key.

3.6 Bluetooth

Bluetooth is a global standard for wireless connectivity. Bluetooth is based on a lowcost, short-range radio. Bluetooth technology facilitates the replacement of the cables normally used to connect one device to another, with one universal short-range radio link. Two Bluetooth devices can talk to each other when they come within a range of 10 meters to each other. Due to their dependence on a radio link, as opposed to alternate technology such as an infrared connection, Bluetooth devices do not require a line-of-sight connection in order to communicate. Bluetooth can interfere, come in for wall or other electron device and so on. Making Bluetooth device, battery capability will waste quickly.

For insuring, phone and bluetooth can connect, please refer with equipment manufacturer before buy.

In some place, bluetooth can limit, before making, please refer the local charge department or service operator.

Maintain and Care

Caring for Battery

This phone uses a rechargeable battery as power source, when the charge is weak, recharge immediately to protect the batter life. It is best to drain the battery charge first.

When not using the charger, unplug it from the power source and the phone. Over charging will shorten the battery life. Not leave the charger connected to the unit or battery for more than a week.

Temperature affects battery charge capacity. Your battery may need to be warm up or cool down before charging. If the battery temperature is lower than 0 °C and higher than + 45 °C., it will not recharge.

Use the battery as it is originally intended. Do not short circuit the battery by connecting the positive and negative terminals with a conductor.

Do not use a damaged battery

The battery will not perform properly and its life will be shortened if exposed to extreme temperatures.

Do not place the battery in fire; follow local awls and ordinances in disposing used battery.

Maintenance

Do not leave your phone within the reach of small children (certain removable parts may be accidentally ingested).

Do not use your phone in damp areas (bathroom, swimming pool...). Protect it from liquids and other moisture.

Do not expose your phone to extreme temperatures lower than - 10 °C and higher than + 55 °C.

Technical Specifications

NOTE: Actual operating conditions depend on the local network environment, SIM, and user behavior.

Warning: Any consequence caused by misuse, abuse, or not following any and all of the above-written suggestions and instructions shall not hold the producer in any way responsible to any degree.

Announcement: The manufacturer reserves the right to change or upgrade specifications or software versions without prior or separate notice. Trade marks mentioned or used in this material belong to their respective owners.

FCC caution:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.

- Increase the separation between the equipment and receiver.

- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

- Consult the dealer or an experienced radio/TV technician for help.

This wireless phone meets the government's requirements for exposure to radio waves.

The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons regardless of age or health.

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR, The SAR limit set by the FCC is 1.6W/Kg
